CHAPTER XII.

CAPTURE OF THE "SURVEYOR."—WORK OF THE GUNBOAT FLOTILLA.—OPERATIONS ON CHESAPEAKE BAY.—COCKBURN'S DEPREDATIONS.—CRUISE OF THE "ARGUS."—HER CAPTURE BY THE "PELICAN."—BATTLE OF THE "ENTERPRISE" AND "BOXER."—END OF THE YEAR 1813 ON THE OCEAN.

WITH the capture of the "Chesapeake" in June, 1813, we abandoned our story of the naval events along the coast of the United States, to follow Capt. Porter and his daring seamen on their long cruise into far-off seas. But while the men of the "Essex" were capturing whalers in the Pacific, chastising insolent savages at Nookaheevah, and fighting a gallant but unsuccessful fight at Valparaiso, other blue-jackets were as gallantly serving their country nearer home. From Portsmouth to Charleston the coast was watched by British ships, and collisions between the enemies were of almost daily occurrence. In many of these actions great bravery was shown on both

sides. Noticeably was this the case in the action between the cutter "Surveyor" and the British frigate "Narcissus," on the night of June 12. The "Surveyor," a little craft manned by a crew of fifteen men, and mounting six twelve-pound carronades, was lying in the York River near Chesapeake Bay. From the masthead of the "Narcissus," lying farther down the bay, the spars of the cutter could be seen above the tree-tops; and an expedition was fitted out for her capture. Fifty men, led by a veteran officer, attacked the little vessel in the darkness, but were met with a most determined resistance. The Americans could not use their carronades, but with their muskets they did much execution in the enemy's ranks. But they were finally overpowered, and the little cutter was towed down under the frigate's guns. The next day Mr. Travis, the American commander, received his sword which he had surrendered, with a letter from the British commander, in which he said, "Your gallant and desperate attempt to defend your vessel against more than double your number, on the night of the 12th inst., excited such admiration on the part of your opponents as I have seldom witnessed, and induced me to return you the sword you had so nobly used, in testimony of mine. . . . In short, I am at a loss which to admire most, the previous arrangement on board the 'Surveyor,' or the determined manner in which her deck was disputed, inch by inch."

During the summer of 1813, the little gunboats, built in accordance with President Jefferson's plan for a coast guard of single-gun vessels, did a great deal of desultory fighting, which resulted in little or nothing. They were not very seaworthy craft, the heavy guns mounted amidships causing them to careen far over in even a sailor's "capfull" of wind. When they went into action, the first shot from the gun set the gunboat rocking so that further fire with any precision of aim was impossible. The larger gunboats carried sail enough to enable them to cruise about the coast, keeping off privateers and checking the marauding expeditions of the British. Many of the gunboats, however, were simply large galleys propelled with oars, and therefore confined in their operations to bays and inland waters. The chief scene of their operations was Chesapeake Bay.

This noble sheet of water had been, since the very opening of the year 1813, under the control of the British, who had gathered there their most powerful vessels under the command of Admiral Cockburn, whose

name gained an unenviable notoriety for the atrocities committed by his forces upon the defenceless inhabitants of the shores of Chesapeake Bay. Marauding expeditions were continually sent from the fleet to search the adjacent country for supplies. When this method of securing provisions failed, Cockburn hit upon the plan of bringing his fleet within range of a village, and then commanding the inhabitants to supply his needs, under penalty of the instant bombardment of the town in case of refusal. Sometimes this expedient failed, as when Commodore Beresford, who was blockading the Delaware, called upon the people of Dover to supply him at once with "twenty-five large bullocks and a proportionate quantity of vegetables and hay." But the sturdy inhabitants refused, mustered the militia, dragged some old cannon down to the water-side, and, for lack of cannon-balls of their own, valiantly fired back those thrown by the British, which fitted the American ordnance exactly.

Soon after this occurrence, a large party from Cockburn's fleet landed at Havre de Grace, and, having driven away the few militia, captured and burned the town. Having accomplished this exploit, the marauders continued their way up the bay, and turning up into the Sassafras River ravaged the country on both sides of the little stream. After spreading distress far and wide over the beautiful country that borders Chesapeake Bay, the vandals returned to their ships, boasting that they had despoiled the Americans of at least seventy thousand dollars, and injured them to the amount of ten times that sum.

By June, 1813, the Americans saw that something must be done to check the merciless enemy who had thus revived the cruel vandalism, which had ceased to attend civilized warfare since the middle ages. A fleet of fifteen armed galleys was fitted out to attack the frigate of Cockburn's fleet that lay nearest to Norfolk. Urged forward by long sweeps, the gunboats bore down upon the frigate, which, taken by surprise, made so feeble and irregular a response that the Americans thought they saw victory within their grasp. The gunboats chose their distance, and opened a well-directed fire upon their huge enemy, that, like a hawk attacked by a crowd of sparrows, soon turned to fly. But at this moment the wind changed, enabling two frigates which were at anchor lower down the bay to come up to the aid of their consort. The American gunboats drew off slowly, firing as they departed.

This attack infused new energy into the British, and they at once began formidable preparations for an attack upon Norfolk. On the 20th of June they moved forward to the assault, — three seventy-four-gun ships, one sixty-four, four frigates, two sloops, and three transports. They were opposed by the American forces stationed on Craney Island, which commands the entrance to Norfolk Harbor. Here the Americans had thrown up earthworks, mounting two twenty-four, one eighteen, and four six pound cannon. To work this battery, one hundred sailors from the "Constellation," together with fifty marines, had been sent ashore. A large body of militia and a few soldiers of the regular army were also in camp upon the island.

The British set the 22d as the date for the attack; and on the morning of that day, fifteen large boats, filled with sailors, marines, and soldiers to the number of seven hundred, put off from the ships, and dashed toward the batteries. At the same time a larger force tried to move forward by land, but were driven back, to wait until their comrades in the boats should have stormed and silenced the American battery. But that battery was not to be silenced. After checking the advance of the British by land, the Americans waited coolly for the column of boats to come within point-blank range. On they came, bounding over the waves, led by the great barge "Centipede," fifty feet long, and crowded with men. The blue-jackets in the shore battery stood silently at their guns. Suddenly there arose a cry, "Now, boys, are you ready?" "All ready," was the response. "Then fire!" And the great guns hurled their loads of lead and iron into the advancing boats. The volley was a fearful one; but the British still came on doggedly, until the fire of the battery became too terrible to be endured. "The American sailors handled the great guns like rifles," said one of the British officers, speaking of the battle. Before this terrific fire, the advancing column was thrown into confusion. The boats, drifting upon each other, so crowded together that the oarsmen could not make any headway. A huge round shot struck the "Centipede," passing through her diagonally, leaving death and wounds in its track. The shattered craft sunk, and was soon followed by four others. The order for retreat was given; and, leaving their dead and some wounded in the shattered barges that lay in the shallow water, the British fled to their ships. Midshipman Tatnall, who, many years later, served in the

Confederate navy, waded out with several sailors, and, seizing the "Centipede," drew her ashore. He found several wounded men in her, — one a Frenchman, with both legs shot away. A small terrier dog lay whimpering in the bow. His master had brought him along for a run on shore, never once thinking of the possibility of the flower of the British navy being beaten back by the Americans.

So disastrous a defeat enraged the British, who proceeded to wreak their vengeance upon the little town of Hampton, which they sacked and burned, committing acts of shameful violence, more in accordance with the character of savages than that of civilized white men. The story of the sack of Hampton forms no part of the naval annals of the war, and in its details is too revolting to deserve a place here. It is a narrative of atrocious cruelty not to be paralleled in the history of warfare in the nineteenth century.

Leaving behind him the smoking ruins of Hampton, Cockburn with his fleet dropped down the bay, and, turning southward, cruised along the coast of the Carolinas. Anchoring off Ocracoke Inlet, the British sent a fleet of armed barges into Pamlico Sound to ravage the adjoining coast. Two privateers were found lying at anchor in the sound, — the "Anaconda" of New York, and the "Atlas" of Philadelphia. The British forces, eight hundred in number, dashed forward to capture the two vessels. The "Atlas" fell an easy prey; but the thirteen men of the "Anaconda" fought stoutly until all hope was gone, then, turning their cannon down upon the decks of their own vessel, blew great holes in her bottom, and escaped to the shore. After this skirmish, the British landed, and marched rapidly to Newbern; but, finding that place well defended by militia, made their way back to the coast, desolating the country through which they passed, and seizing cattle and slaves. The latter they are said to have sent to the West Indies and sold. From Pamlico Sound Cockburn went to Cumberland Island, where he established his winter quarters, and whence he continued to send out marauding expeditions during the rest of the year.

Very different was the character of Sir Thomas Hardy, who commanded the British blockading fleet off the New England coast. A brave and able officer, with the nature and training of a gentleman, he was as much admired by his enemies for his nobility, as Cockburn was hated

for his cruelty. It is more than possible, however, that the difference between the methods of enforcement of the blockade on the New England coast and on the Southern seaboard was due to definite orders from the British admiralty: for the Southern States had entered into the war heart and soul; while New England gave to the American forces only a faint-hearted support, and cried eagerly for peace at any cost. So strong was this feeling, that resolutions of honor to the brave Capt. Lawrence were defeated in the Massachusetts Legislature, on the ground that they would encourage others to embark in the needless war in which Lawrence lost his life. Whatever may have been the cause, however, the fact remains, that Hardy's conduct while on the blockade won for him the respect and admiration of the very people against whom his forces were arrayed.

On June 18 the British blockaders off New York Harbor allowed a little vessel to escape to sea, that, before she could be captured, roamed at will within sight of the chalk cliffs of England, and inflicted immense damage upon the commerce of her enemy. This craft was the little tug-boat "Argus," which left New York bound for France. She carried as passenger Mr. Crawford of Georgia, who had lately been appointed United States minister to France. After safely discharging her passenger at L'Orient, the "Argus" turned into the chops of the English Channel, and cruised about, burning and capturing many of the enemy's ships. She was in the very highway of British commerce; and her crew had little rest day or night, so plentiful were the ships that fell in their way. It was hard for the jacksies to apply the torch to so many stanch vessels, that would enrich the whole crew with prize-money could they but be sent into an American port. But the little cruiser was thousands of miles from any American port, and no course was open to her save to give every prize to the flames. After cruising for a time in the English Channel, Lieut. Allen, who commanded the "Argus," took his vessel around Land's End, and into St. George's Channel and the Irish Sea. For thirty days he continued his daring operations in the very waters into which Paul Jones had carried the American flag nearly thirty-five years earlier. British merchants and shipping owners in London read with horror of the destruction wrought by this one vessel. Hardly a paper appeared without an account of some

new damage done by the "Argus." Vessels were kept in port to rot at their docks, rather than fall a prey to the terrible Yankee. Rates of insurance went up to ruinous prices, and many companies refused to take any risks whatever so long as the "Argus" remained afloat. But the hue and cry was out after the little vessel; and many a stout British frigate was beating up and down in St. George's Channel, and the chops of the English Channel, in the hopes of falling in with the audacious Yankee, who had presumed to bring home to Englishmen the horrors of war.

It fell to the lot of the brig-sloop "Pelican" to rid the British waters of the "Argus." On the night of the thirteenth of August, the American vessel had fallen in with a British vessel from Oporto, and after a short chase had captured her. The usual result followed. The prisoners with their personal property were taken out of the prize, and the vessel was set afire. But, before the torch was applied, the American sailors had discovered that their prize was laden with wine; and their resolution was not equal to the task of firing the prize without testing the quality of the cargo. Besides treating themselves to rather deep potations, the boarding-crew contrived to smuggle a quantity of the wine into the fore-castle of the "Argus." The prize was then fired, and the "Argus" moved away under easy sail. But the light of the blazing ship attracted the attention of the lookout on the "Pelican," and that vessel came down under full sail to discover the cause.

Day was just breaking, and by the gray morning light the British saw an American cruiser making away from the burning hulk of her last prize. The "Pelican" followed in hot pursuit, and was allowed to come alongside, although the fleet American could easily have left her far astern. But Capt. Allen was ready for the conflict; confident of his ship and of his crew, of whose half-intoxicated condition he knew nothing, he felt sure that the coming battle would only add more laurels to the many already won by the "Argus." He had often declared that the "Argus" should never run from any two-master; and now, that the gage of battle was offered, he promptly accepted.

At six o'clock in the morning, the "Pelican" came alongside, and opened the conflict with a broadside from her thirty-two pound caronades. The "Argus" replied with spirit, and a sharp cannonade began

Four minutes after the battle opened, Capt. Allen was struck by a round shot that cut off his left leg near the thigh. His officers rushed to his side, and strove to bear him to his cabin; but he resisted, saying he would stay on deck and fight his ship as long as any life was left him. With his back to a mast, he gave his orders and cheered on his men for a few minutes longer; then, fainting from the terrible gush of blood from his wound, was carried below. To lose their captain so early in the action, was enough to discourage the crew of the "Argus." Yet the officers left on duty were brave and skilful. Twice the vessel was swung into a raking position, but the gunners failed to seize the advantage. "They seemed to be nodding over their guns," said one of the officers afterward. The enemy, however, showed no signs of nodding. His fire was rapid and well directed, and his vessel manœuvred in a way that showed a practised seaman in command. At last he secured a position under the stern of the "Argus," and lay there, pouring in destructive broadsides, until the Americans struck their flag,—just forty-seven minutes after the opening of the action. The loss on the "Argus" amounted to six killed and seventeen wounded.

No action of the war was so discreditable to the Americans as this. In the loss of the "Chesapeake" and in the loss of the "Essex," there were certain features of the action that redounded greatly to the honor of the defeated party. But in the action between the "Argus" and the "Pelican," the Americans were simply outfought. The vessels were practically equal in size and armament, though the "Pelican" carried a little the heavier metal. It is also stated that the powder used by the "Argus" was bad. It had been taken from one of the prizes, and afterwards proved to be condemned powder of the British Government. In proof of the poor quality of this powder, one of the American officers states that many shot striking the side of the "Pelican" were seen to fall back into the water; while others penetrated the vessel's skin, but did no further damage. All this, however, does not alter the fact that the "Argus" was fairly beaten in a fair fight.

While the British thus snapped up an American man-of-war cruising at their harbors' mouths, the Americans were equally fortunate in capturing a British brig of fourteen guns off the coast of Maine. The captor was the United States brig "Enterprise," a lucky little vessel belonging to a

very unlucky class; for her sister brigs all fell a prey to the enemy. The "Nautilus," it will be remembered, was captured early in the war. The "Vixen" fell into the hands of Sir James Yeo, who was cruising in the West Indies, in the frigate "Southampton;" but this gallant officer reaped but little benefit from his prize, for frigate and brig alike were soon after wrecked on one of the Bahama Islands. The "Siren," late in the war, was captured by the seventy-four-gun ship "Medway," and the loss of the "Argus" has just been chronicled. Of all these brigs, the "Argus" alone was able to fire a gun in her own defence, before being captured; the rest were all forced to yield quietly to immensely superior force.

In the war with Tripoli, the "Enterprise" won the reputation of being a "lucky" craft; and her daring adventures and thrilling escapes during the short naval war with France added to her prestige among sailors. When the war with England broke out, the little brig was put in commission as soon as possible, and assigned to duty along the coast of Maine. She did good service in keeping off privateers and marauding expeditions from Nova Scotia. In the early part of September, 1813, she was cruising near Penguin Point, when she sighted a brig in shore that had the appearance of a hostile war-vessel. The stranger soon settled all doubts as to her character by firing several guns, seemingly for the purpose of recalling her boats from the shore. Then, setting sail with the rapidity of a man-of-war, she bore down upon the American vessel. The "Enterprise," instead of waiting for the enemy, turned out to sea, under easy sail; and her crew were set to work bringing aft a long gun, and mounting it in the cabin, where one of the stern windows had been chopped away to make a port. This action rather alarmed the sailors, who feared that their commander, Lieut. Burrows, whose character was unknown to them, intended to avoid the enemy, and was rigging the long gun for a stern-chaser. An impromptu meeting was held upon the fore-castle; and, after much whispered consultation, the people appointed a committee to go aft and tell the commander that the lads were burning to engage the enemy, and were confident of whipping her. The committee started bravely to discharge their commission; but their courage failed them before so mighty a potentate as the commander, and they whispered their message to the first lieutenant, who laughed, and sent word forward

that Mr. Burrows only wanted to get sea-room, and would soon give the jackies all the fighting they desired.

The Americans now had leisure to examine, through their marine-glasses, the vessel which was so boldly following them to the place of battle. She was a man-of-war brig, flying the British ensign from both mastheads and at the peak.

THE FIGHT WITH THE "BOXER."

Her armament consisted of twelve eighteen-pound carronades and two long sixes, as against the fourteen eighteen-pound carronades and two long nines of the "Enterprise." The Englishman carried a crew of sixty-six men, while the quarter-rolls of the American showed a total of one hundred and

two. But in the battle which followed the British fought with such desperate bravery as to almost overcome the odds against them.

For some time the two vessels fought shy of each other, manœuvring for a windward position. Towards three o'clock in the afternoon, the Americans gained this advantage, and at once shortened sail, and edged down toward the enemy. As the ships drew near, a sailor was seen to climb into the rigging of the Englishman, and nail the colors to the mast, giving the lads of the "Enterprise" a hint as to the character of the reception they might expect. As the vessels came within range, both crews cheered lustily, and continued cheering until within pistol-shot, when the two broadsides were let fly at almost exactly the same moment. With the first fire, both commanders fell. Capt. Blyth of the English vessel was almost cut in two by a round shot as he stood on his quarter-deck. He died instantly. Lieut. Burrows was struck by a canister-shot, which inflicted a mortal wound. He refused to be carried below, and was tenderly laid upon the deck, where he remained during the remainder of the battle, cheering on his men, and crying out that the colors of the "Enterprise" should never be struck. The conflict was sharp, but short. For ten minutes only the answering broadsides rung out; then the colors of the British ship were hauled down. She proved to be the sloop-of-war "Boxer," and had suffered severely from the broadsides of the "Enterprise." Several shots had taken effect in her hull, her fore-mast was almost shot away, and several guns were dismounted. Three men beside her captain were killed, and seventeen wounded. But she had not suffered these injuries without inflicting some in return. The "Enterprise" was much cut up aloft. Her fore-mast and main-mast had each been pierced by an eighteen-pound ball. Her captain lay upon the deck, gasping in the last agonies of death, but stoutly protesting that he would not be carried below until he received the sword of the commander of the "Boxer." At last this was brought him; and grasping it he cried, "Now I am satisfied. I die contented."

The two shattered brigs were taken into Portland, where the bodies of the two slain commanders were buried with all the honors of war. The "Enterprise" was repaired, and made one more cruise before the close of the war; but the "Boxer" was found to be forever ruined for a vessel of war, and she was sold into the merchant-service. The fact that she

was so greatly injured in so short a time led a London paper, in speaking of the battle, to say, "The fact seems to be but too clearly established, that the Americans have some superior mode of firing; and we cannot be too anxiously employed in discovering to what circumstances that superiority is owing."

This battle practically closed the year's naval events upon the ocean.

THE SURRENDER OF THE "BOXER."

The British privateer "Dart" was captured near Newport by some volunteers from the gunboats stationed at that point. But, with this exception, nothing noteworthy in naval circles occurred during the remainder of the year. Looking back over the annals of the naval operations of 1813, it

is clear that the Americans were the chief sufferers. They had the victories over the "Peacock," "Boxer," and "Highflyer" to boast of; but they had lost the "Chesapeake," "Argus," and "Viper." But, more than this, they had suffered their coast to be so sealed up by British blockaders that many of their best vessels were left to lie idle at their docks. The blockade, too, was growing stricter daily, and the outlook for the future seemed gloomy; yet, as it turned out, in 1814 the Americans regained the ground they had lost the year before.

CHAPTER XIII.

ON THE LAKES.—CLOSE OF HOSTILITIES ON LAKES ERIE AND HURON.—DESULTORY WARFARE ON LAKE ONTARIO IN 1813.—HOSTILITIES ON ONTARIO IN 1814.—THE BATTLE OF LAKE CHAMPLAIN.—END OF THE WAR UPON THE LAKES.

IN considering the naval operations on the Great Lakes, it must be kept in mind, that winter, which checked but little naval activity on the ocean, locked the great fresh-water seas in an impenetrable barrier of ice, and effectually stopped all further hostilities between the hostile forces afloat. The victory gained by Commodore Perry on Lake Erie in September, 1813, gave the Americans complete command of that lake; and the frozen season soon coming on, prevented any attempts on the part of the enemy to contest the American supremacy. But, indeed, the British showed little ability, throughout the subsequent course of the war, to snatch from the Americans the fruits of the victory at Put-in-Bay. They embarked upon no more offensive expeditions; and the only notable naval contest between the two belligerents during the remainder of the war occurred Aug. 12, 1814, when a party of seventy-five British seamen and marines attempted to cut out three American schooners that lay at the foot of the lake near Fort Erie.

The British forces were at Queenstown, on the Niagara River; but by dint of carrying their boats twenty miles through the woods, then poling down a narrow and shallow stream, with a second portage of eight miles, the adventurers managed to reach Lake Erie. Embarking here, they

ON THE WAY TO LAKE ERIE.

pulled down to the schooners. To the hail of the lookout, they responded, "Provision boats." And, as no British were thought to be on Lake Erie, the response satisfied the officer of the watch. He quickly discovered his mistake, however, when he saw his cable cut, and a party of armed men scrambling over his bulwarks. This first prize, the "Somers," was quickly in the hands of the British, and was soon joined in captivity by the "Ohio," whose people fought bravely but unavailingly against the unexpected foe. While the fighting was going on aboard the vessels, they were drifting down the stream; and, by the time the British victory

was complete, both vessels were beyond the range of Fort Erie's guns, and safe from recapture. This successful enterprise certainly deserves a place as the boldest and best executed cutting-out expedition of the war.

Long before this occurrence, Capt. Arthur Singleton, who had succeeded to Perry's command, despairing of any active service on Lake Erie, had taken his squadron of five vessels into Lake Huron, where the British still held the supremacy. His objective point was the Island of Michilimackinac (Mackinaw), which had been captured by the enemy early in the war. On his way, he stopped and burned the British fort and barracks of St. Joseph. At Mackinaw he was repulsed, with the loss of seventy men; after which he returned to Lake Erie, leaving two vessels, the "Scorpion" and "Tigress," to blockade the Nattagawassa River. The presence of these vessels irritated the British, and they at once set about preparations for their capture. On the night of the 3d of September the "Tigress" was captured after a sharp struggle, which, as the British commanding officer said, "did credit to her officers, who were all severely wounded." At the time of the attack, the "Scorpion" was several miles away, and knew nothing of the misfortune of her consort. Knowing this, the British sent their prisoners ashore, and, hoisting the American flag over the captured vessel, waited patiently for their game to come to them. They were not disappointed in their expectations. On the 5th the "Scorpion" came up, and anchored, unsuspectingly, within two miles of her consort. At early dawn the next morning the "Tigress" weighed anchor; and, with the stars and stripes still flying, dropped down alongside the unsuspecting schooner, poured in a sudden volley, and, instantly boarding, carried the vessel without meeting any resistance.

With these two skirmishes, the war upon Lake Erie and Lake Huron was ended. But on Lake Ontario the naval events, though in no case comparable with Perry's famous victory, were numerous and noteworthy.

In our previous discussion of the progress of the war upon Lake Ontario, we left Commodore Chauncey in winter quarter at Sackett's Harbor, building new ships, and making vigorous efforts to secure sailors to man them. His energy met with its reward; for, when the melting ice left the lake open for navigation in the spring of 1813, the American fleet was ready for active service, while the best vessels belonging to the

British were still in the hands of the carpenters and riggers. The first service performed by the American fleet was aiding Gen. Pike in his attack upon York, where the Americans burned an almost completed twenty-four-gun ship, and captured the ten-gun brig "Gloucester." The land forces who took part in this action were terribly injured by the explosion of the powder-magazine, to which the British had applied a slow-match when they found they could no longer hold their position. This battle was fought April 27, 1813. One month later, the naval forces co-operated with the soldiery in driving the British from Fort George, on the Canada side of the Niagara River, near Lake Ontario. Perry came from Lake Erie to take part in this action, and led a landing party under the fire of the British artillery with that dashing courage which he showed later at the battle of Put-in-Bay. The work of the sailors in this action was cool and effective. Their fire covered the advance of the troops, and silenced more than one of the enemy's guns. "The American ships," writes a British historian, "with their heavy discharges of round and grape, too well succeeded in thinning the British ranks."

But by this time the British fleet was ready for sea, and left Kingston on the 27th of May; while Chauncey was still at the extreme western end of the lake. The enemy determined to make an immediate assault upon Sackett's Harbor, and there destroy the corvette "Gen. Pike," which, if completed, would give Chauncey supremacy upon the lake. Accordingly the fleet under Sir James Lucas Yeo, with a large body of troops under Sir George Prescott, appeared before the harbor on the 29th. Although the forces which rallied to the defence of the village were chiefly raw militia, the British attack was conducted with so little spirit that the defenders won the day; and the enemy retreated, leaving most of his wounded to fall into the hands of the Americans. Yeo then returned to Kingston; and the American fleet came up the lake, and put into Sackett's Harbor, there to remain until the completion of the "Pike" should give Chauncey control of the lake. While the Americans thus remained in port, the British squadron made brief incursions into the lake, capturing a few schooners and breaking up one or two encampments of the land forces of the United States.

Not until the 21st of July did the Americans leave their anchorage. On that day, with the formidable corvette "Pike" at the head of the

line, Chauncey left Sackett's Harbor, and went up to Niagara. Some days later, Yeo took his squadron to sea; and on the 7th of August the two hostile fleets came in sight of one another for the first time. Then followed a season of manœuvring, — of challenging and counter-challenging, of offering battle and of avoiding it, — terminating in so inconclusive an engagement that one is forced to believe that neither commander dared to enter the battle for which both had been so long preparing. The American squadron consisted largely of schooners armed with long guns. In smooth weather these craft were valuable adjuncts to the larger vessels, while in rough weather they were useless. Yeo's squadron was mostly square-rigged, and was therefore equally serviceable in all kinds of weather. It seems likely, therefore, that the Americans strove to bring on the conflict in smooth weather; while the British were determined to wait until a heavy sea should lessen the force of their foes. In this dilemma several days passed away.

On the night of the 7th of August the wind came up to blow, and the rising waves soon demonstrated the uselessness of schooners for purposes of war. At early dawn a fierce gust of wind caused the schooners "Hamilton" and "Scourge" to careen far to leeward. Their heavy guns broke loose; then, crashing down to the submerged beams of the schooners, pulled them still farther over; and, the water rushing in at their hatches, they foundered, carrying with them to the bottom all their officers, and all but sixteen of the men. This loss reduced Chauncey's force to more of an equality with that of the British; yet for two days longer the manœuvring continued, without a shot being fired. On the night of the 10th the two squadrons formed in order of battle, and rapidly approached each other. At eleven o'clock a cannonade was begun by both parties, and continued for about an hour; though the shot did little material damage on either side. At midnight the British, by a quick movement, cut out and captured two American schooners, and sailed away, without suffering any damage.

A month then intervened before the next hostile meeting. In his despatches to his superior authorities, each commander stoutly affirms that he spent the time in chasing the enemy, who refused to give him battle. Whether it was the British or the Americans that avoided the battle, it is impossible to decide; but it seems reasonable to believe, that, had

either party been really determined upon bringing matters to an issue, the other could have been forced into giving battle.

On the 11th of September, the enemies met near the mouth of the Genesee River, and exchanged broadsides. A few of the British vessels were hulled, and, without more ado, hauled off into the shallow waters of Ambert Bay, whither the Americans could not follow them. Then ensued another long period of peace, broken at last by a naval action in York Bay, on the 28th, in which the British were worsted and obliged to fly though none of their ships were destroyed or captured. On Oct. 2, Chauncey accomplished a really important work, by capturing five British transports, with two hundred and sixty-four men, seven naval and ten army officers. With this achievement, the active work of the Ontario squadron ended for the year, as Chauncey remained blockading Yeo at Kingston, until the approach of winter rendered that precaution no longer necessary.

The navigable season of 1814 opened with the British first upon the lake. The long winter had been employed by the belligerents in adding to their fleets; a work completed first by Yeo, who put out upon the lake on the 3d of May, with eight square-rigged vessels, of which two were new frigates. The Americans had given up their unseaworthy schooners, and had a fleet of eight square-rigged vessels nearly ready, but still lacking the cordage and guns for the three new craft. Yeo thus had the lake to himself for a time, and began a vigorous campaign by an attack upon Oswego, aided by a large body of British troops. Succeeding in this enterprise, he set sail for Sackett's Harbor, and, taking up his position just outside the bar, disposed his vessels for a long and strict blockade. This action was particularly troublesome to the Americans at that time; for their new frigates were just ready for their guns and cables, which could not be brought overland, and the arrival of which by water was seemingly prevented by the blockade. It was in this emergency that the plan, already described, for transporting the great cable for the "Niagara" overland, on the backs of men, was decided upon. Yeo remained on guard at the mouth of the harbor until the 6th of June, then raised the blockade, and disappeared down the lake. For six weeks the Americans continued working on their fleet, to get the ships ready for service. During this time the British gunboat "Black Snake" was brought into the harbor, a

prize to Lieut. Gregory, who had captured it by a sudden assault, with a score of sailors at his back. On the 1st of July, the same officer made a sudden descent upon Presque Isle, where he found a British vessel pierced for fourteen guns on the stocks, ready for launching. The raiders hastily set fire to the ship, and retreated before the enemy could get his forces together.

It was July 31 before Chauncey set sail from Sackett's Harbor. He now had under his command a squadron of eight vessels, two of which were frigates, two ship sloops-of-war, and eight brig-sloops of no mean power. Yeo had, to oppose this force, a fleet of no less respectable proportions. Yet, for the remainder of the year, these two squadrons cruised about the lake, or blockaded each other in turn, without once coming to battle. As transports, the vessels were of some service to their respective governments; but, so far as any actual naval operations were concerned, they might as well never have been built. The war closed, leaving the two cautious commanders still waiting for a satisfactory occasion for giving battle.

Such was the course of the naval war upon the Great Lakes; but the thunder of hostile cannon and the cheers of sailors were heard upon yet another sheet of fresh water, before the quarrel between England and the United States was settled. In the north-east corner of New York State, and slightly overlapping the Canada line, lies Lake Champlain,—a picturesque sheet of water, narrow, and dotted with wooded islands. From the northern end of the lake flows the Richelieu River, which follows a straight course through Canada to the St. Lawrence, into which it empties. The long, navigable water-way thus open from Canada to the very heart of New York was to the British a most tempting path for an invading expedition. By the shore of the lake a road wound along; thus smoothing the way for a land force, whose advance might be protected by the fire of the naval force that should proceed up the lake. Naturally, so admirable an international highway early attracted the attention of the military authorities of both belligerents; and, while the British pressed forward their preparations for an invading expedition, the Americans hastened to make such arrangements as should give them control of the lake. Her European wars, however, made so great a demand for soldiers upon Great Britain, that not until 1814 could she send to America a

sufficient force to undertake the invasion of the United States from the north. In the spring of that year, a force of from ten thousand to fifteen thousand troops, including several thousand veterans who had served under Wellington, were massed at Montreal; and in May a move was made by the British to get control of the lake, before sending their invading forces into New York. The British naval force already in the Richelieu River, and available for service, consisted of a brig, two sloops, and twelve or fourteen gunboats. The American flotilla included a large corvette, a schooner, a small sloop, and ten gunboats, or galleys, propelled with oars. Seeing that the British were preparing for active hostilities, the Americans began to build, with all possible speed, a large brig; a move which the enemy promptly met by pushing forward with equal energy the construction of a frigate. While the new vessels were on the stocks, an irregular warfare was carried on by those already in commission. At the opening of the season, the American vessels lay in Otter Creek; and, just as they were ready to leave port, the enemy appeared off the mouth of the creek with a force consisting of the brig "Linnet" and eight or ten galleys. The object of the British was to so obstruct the mouth of the creek that the Americans should be unable to come out. With this end in view, they had brought two sloops laden with stones, which they intended to sink in the narrow channel. But, luckily, the Americans had thrown up earthworks at the mouth of the river; and a party of sailors so worked the guns, that, after much manœuvring, the British were forced to retire without effecting their purpose.

About the middle of August, the Americans launched their new brig, the "Eagle;" and the little squadron put out at once into the lake, under command of Capt. Thomas Macdonough. Eight days later, the British got their new ship, the "Confiance," into the water. She possessed one feature new to American naval architecture,—a furnace in which to heat cannon-balls.

By this time (September, 1814), the invading column of British veterans, eleven thousand strong, had begun its march into New York along the west shore of the lake. Two thousand Americans only could be gathered to dispute their progress; and these, under the command of Brigadier-Gen. Macomb, were gathered at Plattsburg. To this point, accordingly, Macdonough took his fleet, and awaited the coming of the

enemy; knowing that if he could beat back the fleet of the British, their land forces, however powerful, would be forced to cease their advance. The fleet that he commanded consisted of the flag-ship "Saratoga," carrying eight long twenty-four-pounders, six forty-two-pound and twelve thirty-two-pound carronades; the brig "Eagle," carrying eight long eighteens, and twelve thirty-two-pound carronades; schooner "Ticonderoga," with eight long twelve-pounders, four long eighteen-pounders, and five thirty-two-pound carronades; sloop "Preble," with seven long nines; and ten galleys. The commander who ruled over this fleet was a man still in his twenty-ninth year. The successful battles of the War of 1812 were fought by young officers, and the battle of Lake Champlain was no exception to the rule.

The British force which came into battle with Macdonough's fleet was slightly superior. It was headed by the flag-ship "Confiance," a frigate of the class of the United States ship "Constitution," carrying thirty long twenty-fours, a long twenty-four-pounder on a pivot, and six thirty-two or forty-two pound carronades. The other vessels were the "Linnet," a brig mounting sixteen long twelves; and the "Chubb" and "Finch" (captured from the Americans under the names of "Growler" and "Eagle"),—sloops carrying respectively ten eighteen-pound carronades and one long six; and six eighteen-pound carronades, four long sixes, and one short eighteen. To these were added twelve gunboats, with varied armaments, but each slightly heavier than the American craft of the same class.

The 11th of September had been chosen by the British for the combined land and water attack upon Plattsburg. With the movements of the land forces, this narrative will not deal. The brunt of the conflict fell upon the naval forces, and it was the success of the Americans upon the water that turned the faces of the British invaders toward Canada.

The village of Plattsburg stands upon the shore of a broad bay which communicates with Lake Champlain by an opening a mile and a half wide, bounded upon the north by Cumberland Head, and on the south by Crab Island. In this bay, about two miles from the western shore, Macdonough's fleet lay anchored in double line, stretching north and south. The four large vessels were in the front rank, prepared to meet the brunt of the conflict; while the galleys formed a second line in the rear. The morning of the day of battle dawned clear, with a brisk north-

east wind blowing. The British were stirring early, and at daybreak weighed anchor and came down the lake. Across the low-lying isthmus that connected Cumberland Head with the mainland, the Americans could see their adversaries' top-masts as they came down to do battle. At this sight, Macdonough called his officers about him, and, kneeling upon the quarter-deck, besought Divine aid in the conflict so soon to come. When the little group rose from their knees, the leading ship of the enemy was seen swinging round Cumberland Head; and the men went to their quarters to await the fiery trial that all knew was impending.

The position of the American squadron was such that the British were forced to attack "bows on," thus exposing themselves to a raking fire. By means of springs on their cables, the Americans were enabled to keep their broadsides to the enemy, and thus improve, to the fullest, the advantage gained by their position. The British came on gallantly, and were greeted by four shots from the long eighteens of the "Eagle," that had no effect. But, at the sound of the cannon, a young game-cock that was running at large on the "Saratoga" flew upon a gun, flapped his wings, and crowed thrice, with so lusty a note that he was heard far over the waters. The American seamen, thus roused from the painful revery into which the bravest fall before going into action, cheered lustily, and went into the fight, encouraged as only sailors could be by the favorable omen.

Soon after the defiant game-cock had thus cast down the gage of battle, Macdonough sighted and fired the first shot from one of the long twenty-four pounders of the "Saratoga." The heavy ball crashed into the bow of the "Confiance," and cut its way aft, killing and wounding several men, and demolishing the wheel. Nothing daunted, the British flag-ship came on grandly, making no reply, and seeking only to cast anchor alongside the "Saratoga," and fight it out yard-arm to yard-arm. But the fire of the Americans was such that she could not choose her distance; but after having been badly cut up, with both her port anchors shot away, was forced to anchor at a distance of a quarter of a mile. But her anchor had hardly touched bottom, when she suddenly flashed out a sheet of flames, as her rapid broadsides rung out and her red-hot shot sped over the water toward the American flag-ship. Her first broadside killed or wounded forty of the Americans; while many more were

knocked down by the shock, but sustained no further injury. So great was the carnage, that the hatches were opened, and the dead bodies passed below, that the men might have room to work the guns. Among the slain was Mr. Gamble, the first lieutenant, who was on his knees sighting a gun, when a shot entered the port, split the quoin, drove a great piece of metal against his breast, and stretched him dead upon the deck without breaking his skin. By a singular coincidence, fifteen minutes later a shot from one of the "Saratoga's" guns struck the muzzle of a twenty-four on the "Confiance," and, dismounting it, hurled it against Capt. Downie's groin, killing him instantly without breaking the skin; a black mark about the size of a small plate was the sole visible injury.

In the mean time, the smaller vessels had become engaged, and were fighting with no less courage than the flag-ships. The "Chubb" had early been disabled by a broadside from the "Eagle," and drifted helplessly under the guns of the "Saratoga." After receiving a shot from that vessel, she struck, and was taken possession of by Midshipman Platt, who put off from the flag-ship in an open boat, boarded the prize, and took her into Plattsburg Bay, near the mouth of the Saranac. More than half her people were killed or wounded during the short time she was in the battle. The "Linnet," in the mean time, had engaged the "Eagle," and poured in her broadsides with such effect that the springs on the cables of the American were cut away, and she could no longer bring her broadsides to bear. Her captain therefore cut his cables, and soon gained a position from which he could bring his guns to bear upon the "Confiance." The "Linnet" thereupon dashed in among the American gunboats, and, driving them off, commenced a raking fire upon the "Saratoga." The "Finch," meanwhile, had ranged gallantly up alongside the "Ticonderoga," but was sent out of the fight by two broadsides from the American. She drifted helplessly before the wind, and soon grounded near Crab Island. On the island was a hospital, and an abandoned battery mounting one six-pound gun. Some of the convalescent patients, seeing the enemy's vessel within range, opened fire upon her from the battery, and soon forced her to haul down her flag. Nearly half her crew were killed or wounded. Almost at the same moment, the United States sloop "Preble" was forced out of the fight by the British

gunboats, that pressed so fiercely upon her that she cut her cables and drifted inshore.

The "Ticonderoga" fought a gallant fight throughout. After ridding herself of the "Finch," she had a number of the British gunboats to contend with; and they pressed forward to the attack with a gallantry that showed them to be conscious of the fact, that, if this vessel could be carried, the American line would be turned, and the day won by the English. But the American schooner fought stubbornly. Her galla-

HIRAM PAULDING FIRES THE GUNS.

commander, Lieut. Cassin, walked up and down the taffrail, heedless of the grape and musket-balls that whistled past his head, pointing out to the gunners the spot whereon to train the guns, and directing them to load with canister and bags of bullets when the enemy came too near. The gunners of the schooner were terribly hampered in their work by the lack of matches for the guns; for the vessel was new, and the absence of these very essential articles was unnoticed until too late. The guns of one division were fired throughout the fight by Hiram Paulding,

a sixteen-year-old midshipman, who flashed his pistol at the priming of the guns as soon as aim was taken. When no gun was ready for his services, he rammed a ball into his weapon and discharged it at the enemy. The onslaught of the British was spirited and determined. Often they pressed up within a boat-hook's length of the schooner, only to be beaten back by her merciless fire. Sometimes so few were left alive in the galleys that they could hardly man the oars to pull out of the fight. In this way the "Ticonderoga" kept her enemies at bay while the battle was being decided between the "Saratoga" and the "Confiance."

For it was upon the issue of the conflict between these two ships, that victory or defeat depended. Each had her ally and satellite. Under the stern of the "Saratoga" lay the "Linnet," pouring in raking broadsides. "The "Confiance," in turn, was suffering from the well-directed fire of the "Eagle." The roar of the artillery was unceasing, and dense clouds of gunpowder-smoke hid the warring ships from the eyes of the eager spectators on shore. The "Confiance" was unfortunate in losing her gallant captain early in the action, while Macdonough was spared to fight his ship to the end. His gallantry and activity, however, led him to expose himself fearlessly; and twice he narrowly escaped death. He worked like a common sailor, loading and firing a favorite twenty-four-pound gun; and once, while on his knees, sighting the piece, a shot from the "Confiance" cut in two the spanker-boom, a great piece of which fell heavily upon the captain's head, stretching him senseless upon the deck. He lay motionless for two or three minutes, and his men mourned him as dead; but suddenly his activity returned, and he leaped to his feet, and was soon again in the thick of the fight. In less than five minutes the cry again arose, that the captain was killed. He had been standing at the breach of his favorite cannon, when a round shot took off the head of the captain of the gun, and dashed it with terrific force into the face of Macdonough, who was driven across the deck, and hurled against the bulwarks. He lay an instant, covered with the blood of the slain man; but, hearing his men cry that he was killed, he rushed among them, to cheer them on with his presence.

And, indeed, at this moment the crew of the "Saratoga" needed the presence of their captain to cheer them on to further exertion. The red-hot shot of the "Confiance" had twice set fire to the American ship.

The raking fire from the "Linnet" had dismounted carronades and long guns one by one, until but a single serviceable gun was left in the star board battery. A too heavy charge dismounted this piece, and threw it down the hatchway, leaving the frigate without a single gun bearing upon the enemy. In such a plight the hearts of the crew might well fail them. But Macdonough was ready for the emergency. He still had his port broadside untouched, and he at once set to work to swing the ship round so that this battery could be brought to bear. An anchor was let fall astern, and the whole ship's company hauled in on the hawser, swinging the ship slowly around. It was a dangerous manœuvre; for, as the ship veered round, her stern was presented to the "Linnet," affording an opportunity for raking, which the gunners on that plucky little vessel immediately improved. But patience and hard pulling carried the day; and gradually the heavy frigate was turned sufficiently for the after gun to bear, and a gun's crew was at once called from the hawsers to open fire. One by one the guns swung into position, and soon the whole broadside opened with a roar.

Meanwhile the "Confiance" had attempted the same manœuvre. But her anchors were badly placed; and, though her people worked gallantly, they failed to get the ship round. She bore for some time the effective fire from the "Saratoga's" fresh broadside, but, finding that she could in no way return the fire, struck her flag, two hours and a quarter after the battle commenced. Beyond giving a hasty cheer, the people of the "Saratoga" paid little attention to the surrender of their chief enemy, but instantly turned their guns upon the "Linnet." In this combat the "Eagle" could take no part, and the thunder of her guns died away. Farther down the bay, the "Ticonderoga" had just driven away the last of the British galleys; so that the "Linnet" now alone upheld the cause of the enemy. She was terribly outmatched by her heavier foe, but her gallant captain Pring kept up a desperate defence. Her masts and rigging were hopelessly shattered; and no course was open to her, save to surrender, or fight a hopeless fight. Capt. Pring sent off a lieutenant, in an open boat, to ascertain the condition of the "Confiance." The officer returned with the report that Capt. Downie was killed, and the frigate terribly cut up; and as by this time the water, pouring in the shot-holes in the "Linnet's" hull, had risen a foot above the lower deck, her flag

was hauled down, and the battle ended in a decisive triumph for the Americans.

Terrible was the carnage, and many and strange the incidents, of this most stubbornly contested naval battle. All of the prizes were in a sinking condition. In the hull of the "Confiance" were a hundred and five shot-holes, while the "Saratoga" was pierced by fifty-five. Not a mast that would bear canvas was left standing in the British fleet; those of the dag-ship were splintered like bundles of matches, and the sails torn to rags. On most of the enemy's vessels, more than half of the crews were killed or wounded. The loss on the British side probably aggregated three hundred. Midshipman William Lee of the "Confiance" wrote home after the battle, "The havoc on both sides was dreadful. I don't think there are more than five of our men, out of three hundred, but what are killed or wounded. Never was a shower of hail so thick as the shot whistling about our ears. Were you to see my jacket, waistcoat, and trousers, you would be astonished to know how I escaped as I did; for they are literally torn all to rags with shot and splinters. The upper part of my hat was also shot away. There is one of the marines who was in the Trafalgar action with Lord Nelson, who says it was a mere flea-bite in comparison with this."

The Americans, though victorious, had suffered greatly. Their loss amounted to about two hundred men. The "Saratoga" had been cut up beyond the possibility of repair. Her decks were covered with dead and dying. The shot of the enemy wrought terrible havoc in the ranks of the American officers. Lieut. Stansbury of the "Ticonderoga" suddenly disappeared in the midst of the action; nor could any trace of him be found, until, two days later, his body, cut nearly in two by a round shot, rose from the waters of the lake. Lieut. Vallette of the "Saratoga" was knocked down by the head of a sailor, sent flying by a cannon-ball. Some minutes later he was standing on a shot-box giving orders, when a shot took the box from beneath his feet, throwing him heavily upon the deck. Mr. Brum, the master, a veteran man-o'-war's man, was struck by a huge splinter, which knocked him down, and actually stripped every rag of clothing from his body. He was thought to be dead, but soon re-appeared at his post, with a strip of canvas about his waist, and fought bravely until the end of the action. Some days before the battle, a gentleman

of Oswego gave one of the sailors a glazed tarpaulin hat, of the kind then worn by seamen. A week later the sailor re-appeared, and, handing him the hat with a semi-circular cut in the crown and brim, made while it was on his head by a cannon-shot, remarked calmly, "Look here, Mr. Sloane, how the damned John Bulls have spoiled my hat!"

The last British flag having been hauled down, an officer was sent to take possession of the "Confiance." In walking along her gun-deck, he accidentally ran against a ratline, by which one of her starboard guns was discharged. At this sound, the British galleys and gunboats, which had been lying quietly with their ensigns down, got out oars and moved off up the lake. The Americans had no vessels fit for pursuing them, and they were allowed to escape. In the afternoon the British officers came to the American flag-ship to complete the surrender. Macdonough met them courteously; and, on their offering their swords, put them back, saying, "Gentlemen, your gallant conduct makes you worthy to wear your weapons. Return them to their scabbards." By sundown the surrender was complete, and Macdonough sent off to the Secretary of the Navy a despatch, saying, "*Sir*,—The Almighty has been pleased to grant us a signal victory on Lake Champlain, in the capture of one frigate, one brig, and two sloops-of-war of the enemy."

Some days later, the captured ships, being beyond repair, were taken to the head of the lake, and scuttled. Some of the guns were found to be still loaded; and, in drawing the charges, one gun was found with a canvas bag containing two round shot rammed home, and wadded, without any powder; another gun contained two cartridges and no shot; and a third had a wad rammed down before the powder, thus effectually preventing the discharge of the piece. The American gunners were not altogether guiltless of carelessness of this sort. Their chief error lay in ramming down so many shot upon the powder that the force of the explosion barely carried the missiles to the enemy. In proof of this, the side of the "Confiance" was thickly dotted with round shot, which had struck into, but failed to penetrate, the wood.

The result of this victory was immediate and gratifying. The land forces of the British, thus deprived of their naval auxiliaries, turned about, and retreated to Canada, abandoning forever their projected invasion. New York was thus saved by Macdonough's skill and bravery. Yet the

fame he won by his victory was not nearly proportionate to the naval ability he showed, and the service he had rendered to his country. Before the popular adulation of Perry, Macdonough sinks into second place. One historian only gives him the pre-eminence that is undoubtedly his due. Says Mr. Theodore Roosevelt, in his admirable history, "The Naval War of 1812," "But Macdonough in this battle won a higher fame than any other commander of the war, British or American. He had a decidedly superior force to contend against, and it was solely owing to his foresight and resource that we won the victory. He forced the British to engage at a disadvantage by his excellent choice of position, and he prepared beforehand for every possible contingency. His personal prowess had already been shown at the cost of the rovers of Tripoli, and in this action he helped fight the guns as ably as the best sailor. His skill, seamanship, quick eye, readiness of resource, and indomitable pluck are beyond all praise. Down to the time of the civil war, he is the greatest figure in our naval history. A thoroughly religious man, he was as generous and humane as he was skilful and brave. One of the greatest of our sea captains, he has left a stainless name behind him."

CHAPTER XIV.

ON THE OCEAN.—THE WORK OF THE SLOOP-OF-WAR.—LOSS OF THE "FROLIC."—FRUIT-
LESS CRUISE OF THE "ADAMS."—THE "PEACOCK" TAKES THE "EPERVIER."—THE CRUISE
OF THE "WASP."—SHE CAPTURES THE "REINDEER."—SINKS THE "AVON."—MYSTERIOUS
END OF THE "WASP."

THE opening of the year 1814 found the American coast still rigidly blockaded by the British men-of-war. Two or three of the enemy lay off the mouth of every considerable harbor, and were not to be driven from their post by the icy winds and storms of midwinter on the American coast. It was almost impossible for any American vessel to escape to sea, and a matter of almost equal difficulty for such vessels as were out to get into a home port. The frigate "President" had put to sea early in December, 1813, and after a cruise of eight weeks, during which the traditional ill-luck of the ship pursued her remorselessly, managed to dash into New York Harbor past the blockading squadron. At Boston the blockade was broken by the "Constitution." She left port on the 1st of January, ran off to the southward, and cruised

for some weeks in the West Indies. Here she captured the British man-of-war schooner "Pictou," fourteen guns, and several merchant-vessels. She also fell in with the British thirty-six-gun frigate "Pique," which fled, and escaped pursuit by cutting through a narrow channel during a dark and squally night. The "Constitution" then returned to the coast of the United States, and narrowly escaped falling into the clutches of two British frigates. She managed to gain the shelter of Marblehead Harbor, and there remained until the latter part of the year.

But, while the larger vessels were thus accomplishing little or nothing, two or three small sloops-of-war, of a class newly built, slipped through the enemy's lines, and, gaining the open sea, fought one or two notable actions. Of these, the first vessel to get to sea was the new sloop-of-war "Frolic;" but her career was short and inglorious, for she had been at sea but a few weeks when she fell in with the enemy's frigate "Orpheus" and the schooner "Shelburne." A chase ensued, in which the American vessel threw overboard her guns and anchors, and started the water; but to no avail, for she was overhauled, and forced to surrender. Her service afloat was limited to the destruction of a Carthaginian privateer, which sunk before her guns, carrying down nearly a hundred men.

The "Adams," a vessel that had suffered many vicissitudes, — having been built for a frigate, then cut down to a sloop-of-war, and finally been hewed asunder and converted into a corvette, — put to sea on the 18th of January, under the command of Capt. Charles Morris, formerly of the "Constitution." She laid her course straight to the eastward, and for some time cruised off the western coast of Africa and the Canary Isles. She met with but little success in this region, capturing only three brigs, — the cargo of one of which consisted of wine and fruit; and the second, of palm-oil and ivory. Abandoning the African coast, the corvette turned westward along the equator, and made for the West Indies. A large Indiaman fell in her way, and was brought to; but, before the Americans could take possession of their prize, a British fleet of twenty-five sail, with two men-of-war, hove in sight, and the "Adams" was forced to seek safety in flight. She put into Savannah for provisions and water, but, hearing that the enemy was in force near by, worked out to sea, and made sail for another cruise. Capt. Morris took up a position on the limits of the Gulf Stream, near the Florida coast, in the expectation of

cutting out an Indiaman from some passing convoy. The expected fleet soon came, but was under the protection of a seventy-four, two frigates, and three brigs, — a force sufficient to keep at bay the most audacious of corvettes. Morris hung about the convoy for two days, but saw no chance of eluding the watchful guards. He then crossed the Atlantic to the coast of Ireland. Here the "Adams" narrowly escaped capture; for she was sighted by a frigate, which gave chase, and would have overhauled her, had not the Americans thrown overboard some small cannon, and cut away their anchors. Thus lightened, the corvette sped away, and soon left her pursuers behind.

Continued ill-fortune now reduced the spirits of the sailors of the "Adams" to very low ebb. They were forced to struggle unceasingly against the fierce gales which in winter sweep the Atlantic. Their stock of food and water was giving out; and, to add to their distress, scurvy, the sailors' worst enemy, began to show itself in the ship. They had boldly run into the very waters in which the "Argus" had won so rich a reward, yet not a sail gladdened the eyes of the lookout on the "Adams." It was then with great disappointment that the jackies saw the prow of the corvette turned homeward, after a cruise that would bring them neither honor nor prize-money. The passage homeward was quickly made, and on the 16th of August the vessel was in soundings off the coast of Maine. Night fell, with a dense fog concealing all landmarks from view. Through the darkness the corvette sped on at a pace of eleven miles an hour, until, just as day was breaking, the cry of "Breakers ahead!" was followed by a heavy blow, indicating that the ship had struck. The force of the blow had not been sufficient to stave in the bottom, — a fortunate fact, for the hold was full of prisoners. Nevertheless, she was hard and fast aground, on a ledge of rock that lifted her bow six feet above her stern. Morris, who had rushed upon deck at the first alarm, was unable to make out the ship's position, and feared that they were on Cashes Ledge, a reef so far from the land that it would have been impossible to save in the boats more than half the crew. He had determined, however, to instantly lower the boats and send them off in search of land, when a gust of wind, blowing away the fog, showed a beetling cliff not a hundred yards away. Rugged and inhospitable as was the coast thus exposed, it was better than an expanse of ocean; and at once Morris set to work landing his

prisoners, and the sick, of whom the "Adams" had nearly sixty. With spare sails, tents were put up on the beach; and, stores having been landed, the comfort of all was assured, in case the ship should go to pieces. What the desolate shore was to which they were thus forced to turn for shelter, no one knew.

All hands now turned to at the capstan, in the hopes of getting the vessel off; and about noon, the tide having reached its flood, she gradually slid off the ledge into deep water. After trying the pumps, to see if any serious leak had been started, the difficult task of taking the ship out of the labyrinth of reefs in which she lay was begun. For more than two miles their course lay through a narrow and tortuous channel, bordered on either side with jagged reefs; but the corvette safely threaded her way between the rocks, and soon lay floating in deep water. The next morning the fog blew away; and the voyagers discovered to their astonishment that they were off Mount Desert, instead of near Portsmouth as they had expected.

To return into the cluster of reefs after the little colony of invalids and prisoners that had been left behind, would have been mere folly: so sending two fishing-boats to search out the shore party, and carry them to the nearest village, the "Adams" continued her course, intending to put into the Penobscot River. While making for this point, a sail was sighted, which proved to be the British brig-sloop "Rifleman." The corvette gave chase, but the Englishman kept well in the offing; and, as the condition of the American crew was such that to lead them into action would have been imprudent, Morris abandoned the pursuit, and, putting into the Penobscot, dropped anchor off Hampden. Here, for the present, we will leave the "Adams."

The "Peacock"—a second of the new sloops-of-war, bearing the name of a captured British vessel—put out from New York in March, and made her way to the southward, selecting as her cruising station the waters off the coast of Florida. For some time it seemed that the exertions of the sailors were to be of no avail. Not a sail was to be seen, and the chances for prize-money seemed to be small indeed. But on the 29th of March three merchant-vessels were made out in the offing; while a heavy-built, square-rigged, trim-looking craft that hovered about them was evidently a man-of-war. The strangers seemed to have sighted the

American vessel; for the merchantmen were seen to hastily haul up and run off to the north-east, while the man-of-war edged away for the American ship.

The stranger was His British Majesty's brig sloop-of-war "Epervier," of eighteen guns, and carrying a crew of one hundred and twenty-eight men. The "Peacock" was a ship-sloop of twenty-two guns, with a crew of one hundred and sixty-six men. The advantage, therefore, lay with the Americans; but, in the battle that ensued, the damage they inflicted upon the enemy was out of any proportion to their excess of strength.

The two ships bore down gallantly upon each other, and at a little after ten in the morning passed, exchanging heavy broadsides. The shot of each took effect in the rigging; but the "Peacock" suffered the more, having her foreyard totally disabled,—an injury that compelled her to run large during the rest of the action, and forego all attempts at manœuvring. The two vessels having passed each other, the "Epervier" eased off, and returned to the fight, running on a parallel course with the American ship. The interchange of broadsides then became very rapid; but the British marksmanship was poor, and few of their shot took effect. The "Epervier," on the contrary, suffered severely from the American fire, which took effect in her hull, dismounting several guns, and so injuring the brig that a British naval officer, writing of the action some years later, said, "The most disgraceful part of the affair was that our ship was cut to pieces, and the enemy hardly scratched."

The injury aloft which both vessels sustained caused the battle to take on the character of an action at long range. Under such conditions, the victory was assured to the side showing the best gunnery. For a moment only did it seem that the vessels were likely to come to close quarters, and the English captain seized that occasion to call up his boarders. But they refused, saying, "She's too heavy for us." And a few minutes later the Englishman hauled down his flag, having lost nine killed or mortally wounded, and fourteen wounded. The Americans had suffered but little; only two men being injured, and these but slightly. The shot of the enemy had passed through the rigging of the "Peacock," while the "Epervier" had been hulled forty-five times.

The "Epervier" proved to be a valuable prize. In her hold specie to the amount of one hundred and eighteen thousand dollars was found;

and, when the brig was sold to the United States Government, she brought fifty-five thousand dollars: so that the prize-money won by that action kept the sailors in good-humor for many months to come. But, before the prize could be safely carried into an American port, she had a gantlet to run, in which she narrowly escaped capture. After the wreck of battle had been cleared away, the brig and her captor made for Savannah, but were sighted and chased by two British frigates. The "Peacock," in the hope of drawing away the pursuers, left her prize, and headed out to sea. One frigate only followed her, and the other pressed on hotly after the "Epervier," which, to avoid capture, was forced to run into shallow water, whither the heavy frigate could not follow her. But she was not to escape so easily; for the boats of the frigate were lowered, filled with armed men, and set out in pursuit of the brig, which moved but slowly before the light breeze then blowing. The boats soon overhauled the fugitive, and escape seemed hopeless; for the "Epervier" was manned by a prize-crew of only sixteen men. But Lieut. Nicholson, who was in command, determined to try the effect of bluster. Accordingly he leaped upon the taffrail, with a speaking-trumpet in his hand, and shouted out orders as if calling a huge crew to quarters. The British, who were within easy range, stopped their advance, and, fearing a destructive broadside from the brig's guns, turned and fled precipitately. The "Epervier" continued her course, and reached Savannah in safety on the 1st of May. The "Peacock" reached the same port four days later.

At the moment when the captured "Epervier," flying the stars and stripes, was proudly making her way up the harbor of Savannah amid the plaudits of the people of the little city, there sailed from Portsmouth, N.H., a vessel that was destined to fight a good fight for the honor of that starry banner; and, after winning a glorious victory, to disappear forever from the face of the ocean, carrying to some unknown grave a crew of as brave hearts as ever beat under uniforms of navy blue.

This was the new sloop of war "Wasp," named after the gallant little craft that had been taken by the British after her capture of the "Frolic." She was a stanch three-master, carrying eleven guns to a broadside. Her crew was purely American, not a foreigner among them; but all trained seamen from the seaboard villages and towns of New England, — the homes at that time of probably the hardest seafaring population in the world.

Capt. Blakely, who commanded the vessel, had been attached to the "Enterprise" for some time, but had been ordered to the command of the "Wasp" a few days before the former vessel fought her successful battle with the "Boxer." Blakely, while in command of the "Enterprise," had greatly desired to meet an enemy worthy of his metal. Great, then, was his chagrin, when the "Enterprise," two weeks after he quitted her, fought her gallant battle. In a letter written in January, 1814, he says, "I shall ever view as one of the most unfortunate events of my life having quitted the 'Enterprise' at the moment I did. Had I remained in her a fortnight longer, my name might have been classed with those who stand so high. I cannot but consider it a mortifying circumstance that I left her but a few days before she fell in with the only enemy upon this station with which she could have creditably contended. I confess I felt heartily glad when I received my order to take command of the 'Wasp,' conceiving that there was no hope of doing any thing in the 'Enterprise.' But when I heard of the contest of the latter ship, and witnessed the great delay in the equipment of the former, I had no cause to congratulate myself. The 'Peacock' has ere this spread her plumage to the winds, and the 'Frolic' will soon take her revels on the ocean; but the 'Wasp' will, I fear, remain for some time a dull, harmless drone in the waters of her country."

Notwithstanding his impatience, Blakely was forced to endure the restraints of Portsmouth navy-yard for nearly three months, while the "Wasp" was fitting out; but when she did finally get to sea, on May 1, 1814, she proved herself to be far from a "dull, harmless drone." Slipping unobserved through the British blockading line, the "Wasp" made straight for the European coast before a fresh wind, and was soon cruising in the chops of the English channel, where the "Argus" had won her laurels and met with her defeat. Many English merchantmen were captured and burned, and the terror that spread in English shipping circles recalled the days of the "Argus."

At daylight on the 28th of June, the "Wasp" sighted two merchantmen, and straightway gave chase. Soon a third vessel was discovered on the weather-beam; and, abandoning the vessels first sighted, the American bore down upon the stranger. She proved to be the "Reindeer," a British brig-sloop of eighteen guns, carrying a crew of one hundred and eighteen men. Although the British vessel was by no means a match

in weight of metal for the "Wasp," her captain, William Manners, brought her into action with a cool gallantry which well justified his reputation as one of the bravest men in the British navy.

At ten o'clock in the morning the ships were near enough to each other to exchange signals, but several hours were spent in manœuvring for the weather-gage; so that it was not until after three in the afternoon that the action fairly opened. The day was admirably suitable for a naval battle. Light clouds floated across the sky, and the gentle breeze that was blowing had sufficient strength to propel the ships without careening them. The surface of the ocean was unusually calm for that quarter, in which a rather choppy sea is usually running. Before the light breeze the "Wasp" came down upon her foe, bows on, with her decks cleared for action, and the men at their quarters. On the top-gallant forecastle of the "Reindeer" was mounted a twelve-pound carronade, and the action was opened by the discharge of this piece. In the position she then held, the "Wasp" was unable to reply; and her crew had to bear five effective shots from this gun without being able to fire a shot in return,—an ordeal that less well-disciplined crews might not have endured. For nine minutes the Americans returned not a shot; but then the "Wasp" luffed up, firing the guns from aft forward as they bore. The two ships were now lying broadside to broadside, not twenty yards apart, and every shot told. For ten minutes this position was held, and the two crews worked like Furies in loading and firing the great guns. The roar of the cannon was incessant, and the recoil of the heavy explosions deadened what little way the ships had on when fire was opened. Capt. Manners was too old an officer not to know, that, in an artillery duel of that kind, the victory would surely rest with the side that carried the heaviest guns: so he ran his vessel aboard the "Wasp" on the starboard quarter, intending to board and carry the day with the stubborn, dashing gallantry shown by British seamen when once led to an enemy's deck. At the ringing notes of the bugle, calling up the boarders, the British gathered aft, their faces begrimed with gunpowder, their arms bare, and their keen cutlasses firmly clutched in their strong right hands. The Americans took the alarm at once, and crowded forward to repel the enemy. The marines, whose hard duty it is in long-range fighting to stand with military impassiveness, drawn up in line on deck, while the shot whistle by them, and now and then cut great gaps in

their straight lines, — the marines came aft, with their muskets loaded and bayonets fixed. Before them were sailors with sharp-pointed boarding-pikes, ready to receive the enemy should he come aboard ; while close under the bulwarks were grouped the boarders, ready with cutlass and pistol to beat back the flood of men that should come pouring over the side. The grating of the ships' sides told that the vessels were touching ; and the next instant

THE CAPTAIN OF THE "REINDEER."

the burly British seamen, looming up like giants, as they dashed through the dense murkiness of the powder-smoke, were among the Americans, cutting and firing right and left. From the deck of the "Reindeer" the marines kept up a constant fire of musketry, to which the sea-soldiers of the "Wasp" responded vigorously. Marksmen posted in the tops of each vessel picked off men from their enemy's decks, choosing generally the officers.

Sharp and bloody though the British attack was, the boarders could make no way against the stubborn stand of the Americans. Capt. Manners, seeing his men beaten back, sprang forward to rally them. He was desperately wounded. A gun-shot had passed through his thighs, and a grape-shot had cut across the calves of his legs; but, maimed and bleeding to death as he was, he leaped into the rigging, and, cheering and waving his sword, called to his men to follow him to the decks of the Yankee. The Britons rallied nobly under the encouragement of their brave captain, and again advanced to the assault. But the figure of the daring officer, as he stood thus before his men, waving his sword and calling on them to come on, caught the eye of one of the men in the "Wasp's" main-top; and the next instant a ball crashed into the captain's brain, and he fell heavily to the deck, with his dying eyes turned upwards toward the flag in whose service he had given his life.

Seeing the British captain fall and the men waver, Capt. Blakely with a cheer called up the boarders of the "Wasp;" and in an instant a stream of shouting sailors, cutlass in hand, was pouring over the hammock-nettings, and driving the foe backward on his own decks. The British still fought stubbornly; but their numbers were terribly thinned, and their officers had fallen one by one, until now the captain's clerk was the highest officer left. Seeing his men falling back before the resistless torrent of boarders, this gentleman finally struck the flag; and the battle ended, twenty-seven minutes after the "Reindeer" had fired the opening gun, and eighteen after the "Wasp" had responded.

The execution and damage done on the "Reindeer" by the "Wasp's" shot were appalling. Of her crew of one hundred and eighteen men, thirty-three were killed or fatally wounded, and thirty-four were wounded. The havoc wrought among her officers has already been mentioned. Evidence of the accuracy and skill of the American gunners was to be seen in the fact that the brig was completely cut to pieces in the line of her ports. Her decks were swept clean of boats, spars, and rigging. Her masts were badly shattered, and her fore-mast soon went by the board. The "Wasp" had suffered severely, but was in much better condition than her captured adversary. Eleven of her crew were killed or mortally wounded, and fifteen were wounded severely or slightly. She had been hulled by six round and many grape shot, and her fore-mast had

been cut by a twenty-four-pound shot. A few hours' work cleared from her decks all trace of the bloody fight, and she was in condition for another action. But it would have been folly to try to get the crippled "Reindeer" to port from that region, swarming with British cruisers: so Capt. Blakely took the prisoners on the "Wasp," put a few of the wounded on a neutral vessel that happened to pass, and, burning the

THE END OF THE "REINDEER."

prize, made his way to the harbor of L'Orient. He had fought a brave fight, and come out victor after a desperate contest. But, though defeated, the plucky British might well boast of the gallant manner in which they engaged an enemy so much their superior in strength. History nowhere records a more gallant death than that of the British captain, who fell leading his men in a dashing but vain attempt to retrieve the day by boarding. In its manœuvring, in the courage and discipline of the crews, and in the gallantry of the two captains, the action of the "Wasp" and the "Reindeer" may well go down to history as a model naval duel of the age of sails.

The "Wasp" remained in port for several weeks, occupying the time in refitting, and filling the gaps in her crew by enlistment from the American privateers which then were to be seen occasionally in every port of the world. She then put out to sea, and soon fell in with a convoy of ten British merchantmen, under the protection of the seventy-four "Armada." Though he had no intention of giving battle to the line-of-battle ship, Blakely determined to capture one of the merchantmen; and to this end the "Wasp" hung upon the skirts of the convoy, making rapid dashes now at one vessel, then at another, and keeping the seventy-four in constant anxiety. Finally the swift little cruiser actually succeeded in capturing one of the vessels, and escaping before the heavy seventy-four could get to the scene of the conflict. The prize proved to be a valuable one, for she was laden with iron and brass cannon and military stores.

Towards nightfall of the same day, Sept. 1, 1814, four more sail were sighted; and the "Wasp" at once made off in chase of the most weatherly. At eight o'clock the "Wasp" had gained so rapidly upon the chase, that the latter began firing with her stern chaser, and soon after opened with one of her lee guns. All the time the enemy kept up a vigorous signalling with rockets, lanterns, and guns. By half-past nine the "Wasp" was within hailing-distance, and an officer posted on the bow hailed the stranger several times; but as she returned no satisfactory answer, and refused to heave to, the "Wasp" opened upon her with a twelve-pound carronade, and soon after poured a broadside into her quarter. The two ships ploughed through the black water, under full sail, side by side. The Americans had no idea of the identity of their assailant, but, by the flashes of the guns, could see that she was a heavy brig. Her ports gleamed brightly with battle-lanterns; and the crowds of sailors in the tops, and the regularity of her fire, showed that she was a man-of-war with a well-disciplined crew, and no mere marauding privateer. For a time this running fight continued at such short range that the only American injured was struck by a wad from the enemy's cannon. The British gunners were poor marksmen, and the "Wasp" suffered but little; but it was evident that the American fire was taking effect, for gun after gun on the enemy was silenced. At ten o'clock the Americans, receiving no response to their carronade, stopped firing; and Capt. Blakely,

seizing a speaking-trumpet, shouted across the water, "Have you struck?" No answer came, and the enemy began a feeble fire. The "Wasp" let fly another broadside, and Blakely repeated the question. This time an affirmative response came through the darkness; and the "Wasp" stopped firing, and made preparations to take possession of her prize. Just as the boat was being lowered from the davits, the lookout's cry of "Sail, ho!" checked the proceedings. Through the black night a cloud of canvas could be seen far astern, denoting the presence of another ship, probably an enemy. The drums of the "Wasp" beat fiercely; and the men trooped back to their quarters, ready for a second battle. But in the mean time two more sail hove in sight, and there remained to the "Wasp" nothing but flight. She accordingly made off into the darkness, receiving one broadside from one of the newly arrived men-of-war as she departed. So suddenly was she forced to fly, that she was unable to learn the name and condition of the vessel she had forced to surrender.

It became known in the United States later that the "Wasp's" adversary in the battle in the darkness was the British sloop-of-war "Avon," of eighteen guns. She was badly cut up by the fire of the American gunners, losing her main-mast early in the action. At the time she surrendered, she was in a sinking condition; and, had it not been for the timely arrival of the brig-sloop "Castilian" and the "Tartarus," both British, the crew of the "Avon" would have been prisoners on the "Wasp," or carried to the bottom in the shattered hulk of their own ship. The loss on the "Avon" was ten killed and thirty-two wounded, while on the "Wasp" but three men were injured.

Of all this the gallant Capt. Blakely was ignorant; and, indeed, it is probable that he never knew with whom he had fought his last battle. For the subsequent history of the "Wasp" is more tragic in its unfathomable mystery than is the fate of the bravest ship ever sent to the bottom by the broadsides of an enemy. What was the end of the "Wasp," and where her bones now lie, no one knows. For some little time after her battle with the "Avon," her movements can be traced. Sept. 12, she captured the British brig "Three Brothers," and scuttled her; two days later, the brig "Bacchus" met the same fate at her hands. Sept. 21, she took the brig "Atlanta," eight guns; and, this being a valuable prize, Midshipman Geisinger of the "Wasp" was put on board, and took her

safely to Savannah. He brought the last news that was heard of the ill-fated cruiser for many years. Months passed, and lengthened into years; and still the "Wasp" came not into port, nor could any trace of her whereabouts be found. As time passed on, the attempts to account for her delay changed into theories as to the cause of her total disappearance. All sorts of rumors were afloat. According to one account, the ship was wrecked on the African coast, and her gallant lads were ending their weary lives as slaves to the turbaned Moors of Barbary. Another theory was based on the rumor that an English frigate went into Cadiz much crippled, and with her crew severely injured, and reported that she had been engaged with a heavy American corvette, which had so suddenly disappeared that she was thought to have sunk with all on board. But, as time passed on, the end of the "Wasp" was forgotten by all save a few whose hearts ached for some of the gallant lads thus blotted from the face of the earth.

Years after, the fate of the daring cruiser was again brought into remembrance by fresh news curiously found. When the officers and crew of the "Essex," after that vessel's gallant battle with the "Phœbe" and "Cherub," were sent to the United States under parole, two officers remained at Valparaiso, to give testimony before the prize-court. These gentlemen were Lieut. McKnight, and Mr. Lyman a master's mate. After going to Brazil in the "Phœbe," the two officers took passage in a Swedish brig bound for England. Months passed; and, nothing being heard from them, their friends became alarmed for their safety. In that time, before the day of the telegraph and steam transportation, many things might have easily detained the two officers for a year or more, and nothing be heard of them. But, when two years had passed, inquiries began to be made as to their fate, both by their friends and the naval authorities. The first step was to find the vessel upon which they had left Brazil. This was a work of time; so that it was many years after the disappearance of the officers when the brig was found lying at a London dock. She was the brig "Adonis," and the master proved to be the same who had commanded her when the two officers had taken passage. He readily recalled the circumstance, but claimed that the two passengers had left him in mid-ocean to go aboard an American man-of-war; and in proof of this he brought out the log-book, and, turning back to the year 1814, pointed out the following entries:—

"Aug. 23. — Left Rio de Janeiro ; Stephen Decatur McKnight and James Lyman, passengers for England.

"Oct. 9. — At eight o'clock in the morning discovered a strange sail giving chase to us, and fired several guns ; she gaining very fast. At half-past ten o'clock hove to, and was boarded by an officer dressed in an English doctor's uniform ; the vessel also hoisted an English ensign. The officer proceeded to examine my ship's papers, etc., likewise the letter-bags, and took from one of them a letter to the victualling office, London. Finding I had two American officers as passengers, he immediately left the ship, and went on board the sloop-of-war. He shortly after returned, took the American gentlemen with him, and went a second time on board the ship. In about half an hour he returned, with Messrs. McKnight and Lyman ; and they informed me that the vessel was the United States sloop-of-war 'Wasp,' commanded by Capt. Blakely, or Blake, last from France, where she had refitted ; had lately sunk the 'Reindeer,' English sloop-of-war, and another vessel, which sunk without their being able to save a single person, or learn the vessel's name ; that Messrs. McKnight and Lyman had now determined to leave me and go on board the 'Wasp ;' paid me their passage in dollars, at 5s. 9d. ; and, having taken their luggage on board, the 'Wasp' made sail to the southward. Shortly after they had left, I discovered that Lieut. McKnight had left his writing-desk behind ; and I immediately made signal for the 'Wasp' to return, and stood towards her. They, observing my signal, stood back, came alongside, and sent their boat on board for the writing-desk ; after which they sent me a log-line and some other presents, and made all sail in a direction for the line, and, I have reason to suppose, for the convoy that passed on Thursday previous."

And so the "Wasp," with her ill-fated crew thus re-enforced, passed forever from the sight of man. What was her course after leaving the "Adonis," none may ever know. Whether some chance spark, touching the deadly stores of her magazine, sent vessel and crew to a sudden but merciful death ; or whether, after gallantly battling with some fierce tropical hurricane, she drifted about the trackless ocean a helpless hulk, with a slowly dying crew, carried hither and yon before the winds and the currents, until her timbers, rotting asunder, gave a watery sepulchre to her crew of lifeless bodies, must remain a mystery until the day when the sea shall give up its dead. But, until that day comes, the gallant deeds done by vessel and crew for the flag under which they served should keep the names of the "Wasp" and her men ever memorable in the annals of the great nation whose infancy they so gallantly protected.

CHAPTER XV.

OPERATIONS ON THE NEW ENGLAND COAST.—THE BOMBARDMENT OF STONINGTON.—
DESTRUCTION OF THE UNITED STATES CORVETTE "ADAMS."—OPERATIONS ON CHESA-
PEAKE BAY.—WORK OF BARNEY'S BARGE FLOTILLA.—ADVANCE OF THE BRITISH UPON
WASHINGTON.—DESTRUCTION OF THE CAPITOL.—OPERATIONS AGAINST BALTIMORE.—
BOMBARDMENT OF FORT McHENRY.

THE remaining work of the British blockading squadrons along the Atlantic Coast demands some attention, and some account must be given of certain land actions which were inseparably connected with the course of naval events. This narrative can well be divided into two parts, each dealing with the operations of one section of the blockading fleet; thus tracing the course of events up to the close of the war on the New England coast, before taking up the proceedings on the Chesapeake station.

It will be remembered that Decatur had been checked in his attempt to break the blockade at the eastern end of Long Island Sound, and was forced to take the frigates "United States" and "Macedonian," and the sloop-of-war "Hornet," into New London Harbor. Early in December, 1813, he determined to try to slip out; and choosing a dark night, when wind and tide were in his favor, he dropped down the bay, and was about

LIEUT. RICHMOND PEARSON HOBSON, WHO SANK THE "MERRIMAC"
IN SANTIAGO HARBOR, JUNE 3, 1898

to put to sea, when bright blue lights blazed up on either side of the harbor's mouth, and the plan was exposed by the treachery of some party never detected. After this failure, the two frigates returned up the river, where they remained until the end of the war. The "Hornet" managed to get to sea, and did good service before peace was declared.

In April, 1814, the British blockaders on the New England coast began active operations by sending an expedition up the Connecticut River to Pautepaug Point, where the invaders landed, spiked the guns of a small battery, and destroyed twenty-two vessels. Thence they proceeded down the river, burning a few more craft on the way, and escaped safely to their ships; although a party of militia, and sailors and marines from Decatur's vessels, attempted to cut them off. Shortly after this occurrence, a fleet of American gunboats attacked the blockading squadron off New London, and succeeded in inflicting serious damages upon the enemy.

In June, the enemy's depredations extended to the Massachusetts coast. The little village of Warcham was the first sufferer. A sudden descent made by boats' crews from the frigates "Superb" and "Nimrod" so completely surprised the inhabitants, that the enemy burned the shipping at the wharves, set fire to a factory, and retreated before the villagers fully comprehended the blow that had fallen upon them. Like occurrences took place at other coast-wise towns; and, in every case, the militia proved powerless to check the enemy. All up and down the New England coast, from Maine to the mouth of the Connecticut River, the people were panic-stricken; and hardly a night passed without witnessing the flames of some bonfire kindled by the British out of American property.

In August, 1814, Commodore Hardy appeared off Stonington with a fleet of several vessels, headed by the seventy-four "Ramillies." Casting anchor near shore, he sent to the mayor and selectmen the following curt note: "Not wishing to destroy the unoffending inhabitants residing in the town of Stonington, one hour is granted them, from the receipt of this, to remove out of town." This message naturally caused great consternation; and, while messengers were sent in all directions to call together the militia, the answer was returned to the fleet: "We shall defend the place to the last extremity. Should it be destroyed, we will

perish in its ruins." And, having thus defied the enemy, the farmers and fishermen who inhabited the town set about preparing for its defence. The one battery available for service consisted of two eighteen-pounders and a four-pounder, mounted behind earth breastworks. The gunners were

THE DESCENT ON WAREHAM.

put under the command of an old sailor, who had been impressed into the British navy, where he served four years. The skill he thus acquired in gunnery, he now gladly used against his former oppressors. It was near nightfall when the British opened fire; and they kept up a constant cannonade with round shot, bombs, Congreve rockets, and carcasses until near midnight, without doing the slightest damage. The bursting shells, the fiery rockets, and the carcasses filled with flaming chemicals, fairly filled the little wooden village with fire; but the exertions of the people prevented the spread of the flames. The fleet ceased firing at midnight, but there was no peace for the villagers. Militiamen were pouring in from the country round about, laborers were at work throwing up breast-work, carriers were dashing about in search of ammunition, and all was activity, until, with the first gleam of daylight, the fire of the ships was re-opened. The Americans promptly responded, and soon two eighteen-pound shot hulled the brig "Despatch." For an hour or two a rapid

fire was kept up; then, the powder giving out, the Americans spiked their largest gun, and, nailing a flag to the battery flag-staff, went in search of more ammunition. The British did not land; and the Americans, finding six kegs of powder, took the gun to a blacksmith, who drilled out the spike, and the action continued. So vigorous and well directed was the fire of the Americans, that the "Despatch" was forced to slip her cables and make off to a place of safety. That afternoon a truce was declared, which continued until eight the next morning. By that time, the Americans had assembled in sufficient force to defeat any landing party the enemy could send ashore. The bombardment of the town continued; but the aim of the British was so inconceivably poor, that, during the three days' firing, no damage was done by their shot. A more ludicrous fiasco could hardly be imagined, and the Americans were quick to see the comical side of the affair. Before departing, the British fired over fifteen tons of lead and iron into the town. A quantity of this was picked up by the Americans, and offered for sale. In a New York paper appeared the advertisement, —

"Just received, and offered for sale, about three tons of round shot, consisting of six, nine, twelve, eighteen, twenty-four, and thirty-two pounds; very handsome, being a small proportion of those which were fired from His Britannic Majesty's ships on the unoffending inhabitants of Stonington, in the recent *brilliant* attack on that place. Likewise a few carcasses, in good order, weighing about two hundred pounds each. Apply," etc.

A popular bard of the time set forth in rollicking verse the exploits of the British gunners: —

"They killed a goose, they killed a hen,
Three hogs they wounded in a pen;
They dashed away, — and pray what then?
That was not taking Stonington.

"The shells were thrown, the rockets flew;
But not a shell of all they threw —
Though every house was full in view —
Could burn a house in Stonington."

With this affair, in which the British expended ammunition to the amount of fifty thousand dollars, and lost twenty men killed and fifty wounded, active offensive operations along the Connecticut coast ended. Farther north, however, the British still raided towns and villages, showing more spirit in their attacks than did Hardy at Stonington. Eastport, Me., was captured in July, and converted into a veritable British colony. The inhabitants who remained in the town were forced to take an oath of allegiance to Great Britain; fortifications were thrown up, and an arsenal established; King George's officials were placed in the custom-house, and thenceforward until the end of the war the town was virtually British. Encouraged by this success, the enemy undertook a more difficult task. A formidable fleet of men-of-war and transports, bearing almost ten thousand troops, was fitted out at Halifax for the purpose of reducing to British rule all that part of Maine lying between Passamaquoddy Bay and the Penobscot River. This expedition set sail from Halifax on the 26th of August, bound for Machias; but on the voyage down the coast of Maine the brig "Rifleman" was encountered, and from her the presence of the United States corvette "Adams" in the Penobscot River was learned. It will be remembered that the "Adams," before entering the river, had chased the British brig. Upon learning this, the British naval commander, Admiral Griffiths, pressed forward to the mouth of the Penobscot, and, anchoring there, despatched a land and naval expedition up the river for the capture of the corvette.

When the news of this advancing force reached Capt. Morris, the "Adams" was partially out of water, dismantled, and in the hands of the ship carpenters, who were repairing the injuries she had received on the rocks off Mount Desert. The ship herself was utterly defenceless, but Morris made strenuous attempts to collect a land force to defend her. He managed to rally a few hundred militia-men, who, with the sailors and marines, were routed by the enemy on the night of the 3d of September. Finding that the enemy's forces were not to be driven back by so small a body of men, Morris retreated, first setting fire to the corvette, which was totally destroyed before the British came up.

The retreating sailors were then forced to march over rugged roads to Portsmouth, N.H.; and, as walking was an exercise they were little accustomed to, many suffered severely from the unusual exertion. The difficulty

of getting provisions along the road led the men to separate into several parties; but, notwithstanding the opportunities thus afforded for desertion, all who were not broken down by the long march ultimately reported for duty at the Portsmouth navy-yard.

Along the Southern sea-board the course of the war was even more disastrous to the Americans. Intelligence which reached the national authorities in the spring of 1814 led them to believe that the British were planning an expedition for the capture of Washington. Grave as was the danger, the authorities were slow to move; and though in July the Government called for fifteen thousand troops, and gave their command to Gen. Winder, yet the actual defensive force about the national capital consisted of but a few hundred militia. The naval defence was intrusted to the veteran Commodore Barney, who had served with distinction in the Revolution, and during the early years of the second war with Great Britain had commanded the Baltimore privateer "Rossie." The force put under Barney's command consisted of twenty-six gun-boats and barges, manned by nine hundred men. Chiefly by his own energetic exertions, this force was ready for service in April; and by June the crews were drilled and disciplined, and the commanders schooled in the tactics of squadron evolutions. On the 1st of that month occurred the first brush with the enemy. The American flotilla was then lying in Chesapeake Bay, a little below the mouth of the Patuxent; and, a portion of the enemy's squadron coming within range, Barney ordered out his forces in chase. The British, outnumbered, fled down the bay; but, though Barney was rapidly overhauling them, he saw his hopes of victory shattered by the sudden appearance of His Britannic Majesty's seventy-four gun ship "Dragon." Thus re-enforced, it became the turn of the British to pursue; and the Americans retreated, firing constantly as they fled. The British continuing their advance, Barney was forced to take shelter in the Patuxent River; and he was gradually forced up that stream as far as the mouth of St. Leonard's Creek. The enemy then, feeling certain that the Americans were fairly entrapped, anchored at the mouth of the river, and awaited re-enforcements. These soon arrived; and on the 8th of the month the enemy's forces, consisting of a frigate, brig, and two schooners, moved up the river to the mouth of the creek. Farther they could not go, owing to shoal-water; but they fitted out a small flotilla of barges, and sent them on up the creek.

With this enemy Commodore Barney was ready to come to close quarters; and he moved down upon the British, who quickly retreated to the shelter of their ships. Two or three such sham attacks were made by the enemy, but not until the 10th of the month did they actually give battle to the Americans.

On the morning of that day the British advanced in force to the attack; and the peaceful little creek was ablaze with flags and bright uniforms, and the wooded shores echoed back the strains of martial music. Twenty-one barges, one rocket-boat, and two schooners formed the British column of attack, which moved grandly up the creek, with the bands playing patriotic airs, and the sailors, confident of victory, cheering lustily. Eight hundred men followed the British colors. Against this force Barney advanced with but five hundred sailors. His sloop and gun-vessels he left at anchor, as being too unwieldy for the narrow shoal-waters of St. Leonard's Creek; and he met the enemy's flotilla with but thirteen barges. The enemy opened the action at long range with rockets and howitzers. The former were terrible missiles in an action of this character, corresponding to the shells of modern naval warfare. Some idea of their destructiveness may be derived from the fact, that one of them, fired at long range, exploded and set fire to a boat, after having first passed through the body of one of her crew. Barney had no rockets; and, as the combat at long range was telling upon his men, he at once dashed forward into the midst of the enemy. Soon the barges were engaged in desperate hand-to-hand conflicts. The sailors, grappling with their adversary's craft, fought with pistol and cutlass across the gunwales. Barney, in a small barge with twenty men, dashed about, now striking a blow in aid of some overmatched American boat, then cheering on some laggard, or applauding some deed of gallantry that occurred in his sight. Major William Barney, son of the commodore, saw an American barge on fire, and deserted by her crew who feared the explosion of her magazine. Running his boat alongside, he jumped into the flaming craft; and by dint of bailing in water, and rocking her from side to side, he succeeded in saving the barge. For more than an hour the action raged, both sides fighting with great vigor and gallantry; but the Americans having pierced the British line, the enemy, falling into confusion, turned, and strained every muscle to gain the protection of their ship's guns. The Americans followed in hot pursuit; but their

course was abruptly checked at the mouth of the creek by a British schooner, whose eighteen guns commanded respect. For a moment the pursuing barges fell back; then, choosing advantageous positions, they opened fire upon the schooner with such effect that she soon turned to escape. She succeeded in getting under the protecting guns of the frigate and sloop-of-war, but was so cut to pieces in the short action that she was run aground and abandoned. The larger vessels now opened fire upon Barney's forces; and the flotilla, after a few shots of defiance, returned to its quarters up the creek.

For the next two weeks all was quiet along the shores of the Patuxent and St. Leonard's Creek. The enemy had learned wisdom from their late defeat, and contented themselves with blockading the mouth of the creek, and leaving Barney undisturbed in his retreat. But the doughty commodore had no idea of being thus confined, and during the time of quiet made preparations for an attempt to break the blockade. Land forces from Washington were sent down to aid in this attempt; and two pieces of artillery were to be mounted on a hill at the mouth of the creek, and thence throw red-hot shot into the enemy's ships. The land forces, however, rendered not the slightest assistance; and a too cautious colonel posted the battery at such a point that no shot could reach the enemy without first passing through a hill. Accordingly, when Barney led his flotilla gallantly down to the attack, he found that the issue of the conflict rested upon the sailors alone. From the battery, which was expected to draw the enemy's fire, not a single effective shot was fired. The sailors fought nobly, using their heavy long twelves and eighteens with great effect. But they were sadly hampered by their position; for the mouth of the creek was so narrow that but eight barges could lie abreast, and the others coming down from above soon packed the little stream from shore to shore, giving the enemy a mark that the poorest gunner could hardly miss. Against the storm of grape and canister that the British poured upon them, the sailors had absolutely no protection. The barges were without bulwarks, and the blue-jackets at the guns and at the oars were exposed to the full force of the British fire. Yet in this exposed situation the gallant fellows kept up the fight for nearly an hour, only withdrawing when the last ray of hope for help from the shore battery had vanished. Shortly after the Americans abandoned the attack, the blockad

ing squadron got under way and stood down the bay. From the way in which one of the frigates was working her pumps, the Americans saw that their fire had not been entirely without effect.

Barney's flotilla had now given the British so much trouble that they determined to destroy it without delay; and an expedition of more than five thousand men—composed of regulars, marines, and a few negroes—was carried up the Patuxent, and landed at Benedict, where an armed brig had been stationed to cover the disembarkation. It was early dawn when the signal to land was given, and the river was covered in an instant with a well-manned and warlike flotilla. It was hard work for the British sailors, for a strong current was running; but by three o'clock in the afternoon the whole army was landed, and encamped in a strong position on a hill overlooking the village. Though no American troops were anywhere in the vicinity, the landing was conducted with the utmost caution. As the prow of each boat grated on the sand, the soldiers leaped on the beach, and instantly drew up in line, ready to repel any attack. After the infantry was landed, about a hundred artillerymen followed, and the same number of sailors dragging howitzers.

It is easily understood that this powerful force was not organized solely to destroy Barney's pitiful little flotilla. The real purpose of the British commander was to press on into the interior, and capture Washington, which the Americans had foolishly left without any defences whatever. It came to Barney's ears that Admiral Cockburn had boasted that he would destroy the American flotilla, and dine in Washington the following Sunday. This news the American commodore sent off to the authorities at the capital, and they then began to make futile preparations to repel the invader. In the mean time the British commenced their march up the shores of the Patuxent, meeting with no opposition. Barney, knowing that the defence of the national capital was of far greater importance than the fate of his flotilla, landed with four hundred men, and hastened to the American lines before Washington. He left the barges under the command of the second lieutenant, Mr. Frazier, with instructions to set fire to every boat on the appearance of the enemy, and then join the commodore with all the men left under his charge. Accordingly, when the invading column reached Nottingham, Mr. Frazier took the flotilla still higher up the creek,—a move that vastly disconcerted the British, who

saw their prey eluding them. "But in the main object of our pursuit we were disappointed," wrote a British officer. "The flotilla which had been stationed opposite to Nottingham retired, on our approach, higher up the stream; and we were consequently in the situation of a huntsman who sees his hounds at fault, and has every reason to apprehend that his game will escape." But the game never fell into the hands of the ardent hunters; for the next day Mr. Frazier fulfilled his orders by setting fire to every barge, and, after seeing several of the larger boats blow up, mustered his men, and cut across the country, to join his superior officer.

SHARP-SHOOTERS.

The British naval forces soon after reached Pig Point, the scene of this destruction, and there remained; while the land forces immediately turned away from the river, and marched upon Washington.

It is not necessary to give in detail the incidents of the series of skirmishes by which the British fought their way to the American capital. They were opposed by raw militia, and the few sailors and marines under Barney. The former fled with promptitude at the very first fire, but the sailors and marines fought gallantly. The fighting was sharpest at Bladensburg; and here Barney's blue-jackets won praise from everybody,

even from the enemy whose advance they disputed. Barney himself led the Americans, and sighted a favorite gun of the sailors' battery, until he fell desperately wounded. This battery commanded the road by which the main column of British advanced; and by its hail of grape and canister it beat back the advancing regiments, and for some time checked their further progress. The British thereupon opened with rockets, and sent out sharp-shooters to pick off the Yankee gunners. One of these riflemen was observed by the Americans to deliberately build for himself a small redoubt of stones from an old wall; and, lying down behind it, he began a deliberate fire upon the Americans. His first bullet went through the cap of one of the sailors, and the second sent a poor fellow to his long account. The marines answered with their muskets; but the fellow's stone rampart saved him, and he continued his fire. Barney vowed to put an end to that affair, and, carefully sighting one of his cannon, pulled the lanyard. The heavy round shot was seen to strike the sharp-shooter's defence, and stones and man disappeared in a cloud of dust. Meantime, the enemy had thrown out flanking parties under cover of the woods, and had nearly surrounded the little band of sailors. A musket-ball struck Barney in the thigh, and he began to grow faint with loss of blood; and, finding that the militia had fled, and the sailors were becoming exhausted, the commodore ordered a retreat. The blue-jackets left the field in good order; but their gallant commander had gone but a few steps, when the pain of his wound forced him to lie down under a tree, and await the coming of the enemy. The British soon came up, led by Gen. Ross and Capt. Wainwright of the navy. After learning Barney's rank, and courteously offering to secure surgical aid, the general turned to his companion, and, speaking of the stubborn resistance made by the battery, said, "I told you it was the flotilla men." — "Yes. You were right, though I could not believe you," was the response. "They have given us the only fighting we have had."

Meanwhile, the British, having routed the Americans at every point, pressed on to Washington. The inhabitants fled before them, and the town was almost deserted when the British marched in with banners flying and bands playing. The enemy held the city for only a day; but in that time they did such deeds of vandalism, that even the people and the press of London cried out in indignation. The President's house, the Capitol, all

the public buildings except the Patent Office, were burned to the ground. The navy-yard, with the uncompleted ships on the stocks, was likewise burned; but in this the enemy only acted in accordance with the rules of war. It was their destruction of the public buildings, the national archives, and the Congressional library, that aroused the wrathful indignation of all fair-minded people, whether Americans or Europeans. "Willingly," said

THE MARCH ON WASHINGTON.

one London newspaper, "would we throw a veil of oblivion over our trans-actions at Washington. The Cossacks spared Paris, but we spared not the capital of America." A second English journal fitly denounced the proceedings as "a return to the times of barbarism."

But, if the invaders are rightly to be blamed for the useless vandalism

they encouraged, the American authorities are still more culpable for their neglect of the most ordinary precautions of war. That a national capital, close to the sea, should be left virtually unprotected while the enemy was massing his forces only a few miles away, seems almost unbelievable. But

it was with Washington; for five hundred flotilla men were forced to bear the brunt of the attack of five thousand British. True it is that the military authorities had massed seven thousand militia-men for the defence of the city; but such was the trepidation of these untrained soldiers, that they fled before the main body of the British had come into the fight. That the sailors and marines fought bravely, we have the testimony of the British themselves. Mr. Gleig, a subaltern in the attacking army, writes, "Of the sailors, however, it would be injustice not to speak in the terms which their conduct merits. They were employed as gunners; and not only did they serve their guns with a quickness and precision which astonished their assailants, but they stood till some of them were actually bayonneted with fuses in their hands; nor was it till their leader was wounded and taken, and they saw themselves deserted on all sides by the soldiers, that they quitted the field." Therefore, in the battle of Bladensburg, the blue-jackets won nothing but honor, though the results of the battle were so mortifying to the national pride of the people of the United States.

On the 25th of August the British left the smoking ruins of Washington behind them, and made for their fleet lying in the Patuxent. They feared that the outraged nation would rise upon them, and turn their march into a bloody retreat, like that of the British soldiery from the historic field of Lexington. Accordingly their departure was by night, immediately after a furious storm of rain and wind. Strict orders were issued to all the Americans in Washington, warning them, under penalty of death, not to leave their houses until the sun rose the next morning. Then the British stealthily marched out of the town. "No man spoke above his breath," says subaltern Gleig. "Our very steps were planted lightly, and we cleared the town without exciting observation." A two days' march brought them to Benedict, where the fleet lay in waiting for their reception.

In the mean time, a portion of the British fleet had ascended the Potomac as far as Alexandria, and, finding that town defenceless, proceeded to dictate to the inhabitants the terms upon which they could

save their village from desolation. The British demanded that all naval stores and ordnance, all the shipping and its furniture, all merchandise, and all provisions in the town should be surrendered. Several vessels had been scuttled, to prevent their falling into the hands of the enemy; these, the British demanded, should be raised, repaired, and delivered to them. Time, however, did not permit the fulfilment of this condition; but to the others, harsh and humiliating though they were, the inhabitants were forced to accede. Heavy laden with the spoils of the village, the pillagers weighed anchor and started down the Potomac. But they were not destined to carry away their booty unmolested. News of the expedition reached Baltimore, and a large party of the sailors at the navy-yard were sent to the banks of the Potomac to cut off the enemy's retreat. They were officered by four men famous in American naval annals,—Perry, Rodgers, Porter, and Creighton. At Indian Head, just below Mount Vernon, the Potomac River narrows and flows swiftly between densely wooded bluffs. At this point the Americans threw up redoubts, and, mounting all the cannon that could be gathered on such short notice, prepared to dispute the enemy's passage. When the British fleet hove in sight, they were greeted with a storm of shot from the unsuspected batteries; and they recoiled in confusion. Practised American hunters lined the woody shores, and picked off the British sailors with musket-balls. For some time the fleet was thus checked in its progress. Finally the admiral determined that only by a bold dash could he escape; and accordingly, massing his vessels and concentrating his fire on the chief battery, he dashed past, and rejoined his superior officer, Cockburn, not without paying dearly for his exploit at Alexandria.

While the British were thus devastating the shores of Chesapeake Bay, they cast more than one longing look toward the thriving city of Baltimore, which, by its violent patriotism, had done much to urge on the war. From the ship-yards of Baltimore came more than one stout naval vessel that had forced the enemy to haul down his colors. But that which more than any thing else aroused the hatred of the British was the share Baltimore took in fitting out and manning those swift privateers, concerning whose depredations upon British commerce we shall have something to say in a later chapter. "It is a doomed town," said Vice-admiral Warren. "The truculent inhabitants of Baltimore must be

tamed with the weapons which shook the wooden turrets of Copenhagen," cried the editor of a great London paper. But, nevertheless, Baltimore did not fall before the invader, although for some time the army and navy of the enemy were united in the attempt to bring desolation upon the obnoxious city.

After the fall of Washington, the depredations of the British along the shores of Chesapeake Bay redoubled, and the marauding expeditions thus employed were really feelers thrown out to test the strength of the defenses

PLANNING THE ATTACK.

of Baltimore. That the marauders found some opposition, is evident from a passage in the journal of a British officer. "But these hasty excursions, though generally successful, were not always performed without loss to the invaders." On one of these expeditions, Sir Peter Parker, captain of the frigate "Menelaus," lost his life. He had been ordered down to the mouth of the bay just after the fall of Washington. "I must

first have a frolic with the Yankees," said he. And accordingly, after a jovial dinner aboard his frigate, he led a night expedition of sailors and marines ashore, expecting to surprise a small body of Maryland militia stationed at Moorfields. Sir Peter's frolic turned out disastrously; for the Marylanders were on the watch, and received the invaders with a fierce volley. Sir Peter was gallantly cheering on his men, when a musket-ball cut the main artery in his thigh. "They have hit me, Pearce," he said faintly to his lieutenant; "but it's nothing. Push on, my brave boys, and follow me." But even thus cheering, he fell back, the words died away in his throat, and he bled to death before a surgeon could be found. It is but right to say, that, though he sailed in Cockburn's command, he had none of the cruel brutality which his admiral too often showed.

On the 12th of September a more serious assault was made upon Baltimore. The British naval and military forces united in the attack, which was made by land and sea. A force of nine thousand men, including two thousand marines and two thousand sailors, was landed fifteen miles from Baltimore, and under the command of Gen. Ross and Admiral Cockburn marched gayly inland, never doubting that they would find the Americans unprepared, and repeat their exploits at Washington. In this expectation they were sadly disappointed; for the Maryland militia, aided by a few regulars and seamen, outfought the British at every point, and checked their farther advance. Among the slain was Gen. Ross, who was shot down as he was leading the advance of the British skirmishers. In the mean time, the British fleet had been taking its share in the engagement by attempting to reduce Fort McHenry. A large flotilla of frigates, schooners, sloops, and bomb-ketches entered the Patapsco River on the morning of the 12th, and, casting anchor out of the reach of the fort's guns, opened a furious fire. The fort was manned by militia-men and a large detachment of the gallant sailors from Barney's flotilla. When the continual falling of shells within the fort told that the enemy had come within range, the guns of Fort McHenry opened in response. But, to the intense chagrin of the Americans, it was found that their works mounted not a single gun that would carry to the enemy's fleet. There then remained to the garrison only the trying duty of holding their post, and enduring without response a galling fire from the enemy. All the garrison stood to the guns without flinching; while the shrieking shells fell on all sides, and, exploding, scattered deadly missiles in all directions. One shell struck and dismounted one of the twenty-four-pounders, killing and wounding several of its men. Admiral Cochrane, who commanded the attacking fleet, saw this incident, and ordered three of his bomb-vessels to move up nearer to the fort. This gave the Americans the opportunity for which they had been longing, and instantly every gun in the fort opened upon the three luckless ketches. Half an hour of this fire sufficed to drive the three vessels back to their original station.

Night fell, but brought no cessation of the bombardment. But the enemy, while never slackening his fire, had determined to take advantage of the darkness to send out a landing party to take two small batteries on the banks of the Patapsco, and then assault Fort McHenry from the

rear. Twelve hundred and fifty men, with scaling-ladders and fascines, left the fleet in barges, and moved up the Patapsco towards Fort Covington and the City Battery. But their plan, though well laid, was defeated by the vigilance and courage of the garrisons of the two threatened positions,—sailors all, and many of them men from Barney's flotilla, a training-school which seems to have given to the region about Chesapeake Bay its most gallant defenders. Just as the storming party turned the prows of the barges towards the shore, they were discovered; and from McHenry, Covington, and the City Battery burst a thunderous artillery-fire, that shook the houses in Baltimore, and illumined the dark shores of the river with a lurid glare. Bold as the British sailors were, they could advance no farther under so terrible a fire. Two of the barges were shot to pieces, leaving their crews struggling in the water. A ceaseless hail of grape and canister spread death and wounds broadcast among the enemy; and, after wavering a moment, they turned and fled to their ships. Cochrane, seeing his plan for taking the American positions by assault thus frustrated, redoubled the fury of his fire; hoping that, when daybreak made visible the distant shore, nothing but a heap of ruins should mark the spot where Fort McHenry stood the night before.

A night bombardment is at once a beautiful and a terrible spectacle. The ceaseless flashing of the great guns, lighting up with a lurid glare the dense clouds of smoke that hang over the scene of battle; the roar of the artillery; the shriek of the shell as it leaves the cannon's mouth, slowly dying into a murmur and a dull explosion, as, with a flash of fire, the missile explodes far away,—combine to form a picture, that, despite the horrors of wounds and death, rouses the enthusiasm and admiration of the beholder. When viewed from the deck of one of an attacking fleet, the scene is even more impressive. At each discharge of the great guns, the vessel reels and trembles like a huge animal in agony. The surging waters alongside reflect in their black depths the flash of the cannon and the fiery trail of the flying shell. Far in the distance can be seen the flashes of the enemy's guns, each of which may mean the despatch of a missile bringing death and pain in its track. One who has witnessed such a spectacle can readily understand the fascination which men find in the great game of war.

Pacing the deck of the one of the British vessels was a young American,

RESPONSE TO THE CALL FOR VOLUNTEERS TO ACCOMPANY HOBSON
ON THE "MERRIMAC"

whose temperament was such that he could fully appreciate all the beauties of the scene, even though harassed by anxious fears lest the British should be successful. This man was Francis S. Key, who had visited the fleet with a flag of truce, but was unable to get away before the bombardment began. When the sun set on the evening of the 13th, Key saw his country's flag waving proudly over the ramparts at which the British guns had been so furiously pounding. Would that flag still be there when the sun should rise again? That was the question which Key asked himself as he anxiously walked the deck throughout the night, striving to pierce the darkness, and make out, by the lurid lightnings of the cannon, whether the flag was still there. As the night wore on, Key took an old letter from his pocket, and on the blank sheet jotted down the lines of the immortal national song, "The Star Spangled Banner." Its words merely voice the writer's thoughts; for often during that night he looked anxiously shorewards, to see if

"the rockets' red glare, the bombs bursting in air,
Gave proof, through the night, that our flag was still there."

When the anxiously awaited daylight came, Fort McHenry still stood; and over it waved defiantly the starry folds of the United States flag. The British saw that, by land and sea, their attack had failed; and early in the morning the fleet, after taking on board the remnant of the land forces, sailed suddenly away, and left Baltimore safe. They had bombarded Fort McHenry for twenty-five hours, throwing nearly two thousand shells. Yet, wonderful as it may appear, only four of the Americans were killed, and twenty-four wounded. With this failure the British ended their chief offensive operations along the shores of the Chesapeake. The greater part of the fleet and the soldiery then moved southward, to take part in the operations along the Gulf coast, that culminated in the disastrous defeat of the invaders at New Orleans.

CHAPTER XVI.

DESULTORY HOSTILITIES ON THE OCEAN.—ATTACK UPON FORT BOWYER.—LAFITTE THE PIRATE.—BRITISH EXPEDITION AGAINST NEW ORLEANS.—BATTLE AT THE RIGOLETS.—ATTACK ON NEW ORLEANS, AND DEFEAT OF THE BRITISH.—WORK OF THE BLUE-JACKETS.—CAPTURE OF THE FRIGATE "PRESIDENT."—THE "CONSTITUTION" TAKES THE "CYANE" AND "LEVANT."—THE "HORNET" TAKES THE "PENGUIN."—END OF THE WAR.

THE naval incidents of the latter part of 1814 conferred little honor upon either of the belligerents. Seldom did the meetings between hostile ships rise to the dignity of battles. One or two small American brigs fell a prey to British frigates; but in every instance the disparity of force was so great that the weaker surrendered without striking a blow. Such was the case with the sixteen-gun brig "Rattlesnake," which escaped from one British frigate by throwing overboard all her guns, only to immediately fall a prey to the "Leander." In July of the same year, the United States brig "Siren" was captured by the British frigate "Medway," off the coast of Africa, after a long chase, during which the American hove overboard every thing movable on the brig. Not all these petty encounters ended so favorably for the enemy. Off New York a cutting-out party of volunteers surprised and captured the British tender "Eagle," a small craft carrying one thirty-two-pound

howitzer, and fourteen men. Ten days later, the frigate "Tenedos," which had done such good service on the blockade, suffered the loss of her tender, which was gallantly carried away by the crew of a Yankee gunboat. Some very desperate combats between American privateers and British naval vessels were fought about this time, and will be duly noted in detail in the chapter treating of the exploits of the private armed navy.

As the autumn came on, the British naval forces began to rendezvous in the Gulf of Mexico, preparatory to the campaign before New Orleans. On Sept. 14, a squadron of four British sloops-of-war appeared off Mobile, and opened fire upon Fort Bowyer, which guarded the entrance to Mobile Bay. The attack was vigorous, and the defence determined. A British land expedition moved upon the fort from the landward side; and the little garrison found itself surrounded by enemies, many of whom were Indians, whose savage assistance the British had accepted from the very opening of the war. A small force, only, defended the fort. Percy, the British admiral, knew the weakness of the garrison; and, thinking of the ninety-two guns he could bring to bear against the twenty worked by the Americans, announced proudly, that he would give the garrison just twenty minutes to surrender. The twenty minutes passed quickly, and still the fort responded savagely to the fire of its assailants. The flag of the British ship "Hermes" was shot away; and soon after, a round shot cut her cable, and she drifted upon a sand-bank, and lay helpless, and exposed to a raking fire. Her captain, having set her afire, abandoned her; and she soon blew up. The other vessels kept up the attack gallantly for a time. The flag-staff of the fort was shot away; but the flag soon re-appeared, waving from a sponge-staff. The Americans then redoubled their fire, which soon told so severely upon the British ships that they were forced to withdraw. In the mean time, the assault of the Indians and troops had been checked, and the forces driven back in disorder, thus leaving the victory to the Americans.

It is not within the province of this work to treat of the military operations that led up to the battle of New Orleans. But the last months of 1814 witnessed a series of naval incidents trivial in themselves, but deriving importance from their connection with Gen. Jackson's great victory. Over certain incidents in the preparations of the Americans for repelling the invasion hangs a shade of romance.

To the southward of the quaint, rambling, rose-covered city of New Orleans, the tawny flood of the Mississippi winds towards the gulf in huge serpentine curves. The shores between which it flows rise scarce higher than the surface of the river itself; and a slight increase in the volume of water, or a strong wind, will serve to turn the whole region into a great, watery marsh. From the mouth of the great river, the whole coast of Louisiana, extending north and west, is a grassy sea, a vast expanse of marsh-grass, broken here and there by inlets of the Mexican Gulf, and sluggish, winding bayous that lead up into the higher lands of the State, — water-ways that lead even to the back door of the Crescent City herself, but known only to oyster-gatherers, or in 1814 to the adventurous men who followed the banner of Lafitte the Baratarian pirate.

Pirate he was called then; but it is doubtful whether his misdeeds ever exceeded smuggling, or, at worst, privateering under the protecting flag of some belligerent nation. When all nations were warring, what was easier than for a few gallant fellows, with swift-sailing feluccas, to lurk about the shores of the gulf, and now under the Spanish flag, now under the French, or any colors which suited the case, sally out and capture the richly laden Indiamen that frequented those summer seas? And when a power known as the United States Government, that had its quarters more than a thousand miles from the country of the Creoles, passed an outrageous law known as the embargo, what was more natural than that the Baratarians, knowing the mysterious water-ways that led up to the Crescent City, should utilize their knowledge to take ships and cargoes in and out without the formality of a custom-house examination? Such were the times that led to the formation and growth of the "piratical" colony of Barataria. Its leaders and rulers were John and Pierre Lafitte; one of whom lived in New Orleans in the character of a prosperous merchant, while the other led the expeditions which brought in merchandise to stock the former's stores. Under the influence of the warlike state of Europe, the trade of these worthies thrived, and their settlement at Grande Isle took on the appearance of a prosperous colony and naval station. Storehouses and dwellings stood close to the sea. The fertile face of the island was cut up into fruitful plantations and orange-groves. Breastworks, well dotted with the muzzles of cannon, commanded the approach by sea. More than once, from behind those ramparts, the Bar-

atarians had proved that they could fight, and that they acknowledged the authority of no flag. The Creoles of New Orleans looked indulgently upon the conduct of the outlaws; but the few Americans in the city were highly incensed to see the authority of the United States thus set aside, and vowed that when the war was over the audacious adventurers should be crushed. However, the end came even sooner.

On the 3d of September, a British armed brig anchored near the buccaneers' retreat, and sent a flag of truce ashore. Lafitte, with great dignity, received the envoys in his tent, and assured them of his protection, though the whole village was up in arms clamoring for the death of the intruders. The British officer then announced that he had come to secure the aid of Lafitte and his followers in the campaign against New Orleans. He offered the pirate captain forgiveness for all piracies committed against the British flag,—whereat the chief smiled sardonically,—also thirty thousand dollars in cash, a captain's commission in the British navy, and lands for himself and his followers. It was a tempting bribe; for at that moment Lafitte's brother lay in the *calaboza* at New Orleans awaiting trial for piracy, and the Americans were preparing rapidly for a descent upon the Baratarian stronghold. But, little as he liked the American flag, Lafitte liked the British still less: so, asking the Englishman to wait a few days for his answer, he sent a report of the occurrence to the New Orleans authorities, and offered to co-operate with the Americans, if he could be assured of pardon for all offences committed against the government. This document caused some hesitation at New Orleans; but the military authorities determined to refuse the offer, and break up the outlaws' nest. Accordingly, a few days later, the war schooner "Carolina," six gun-boats, a tender, and a launch, dropped down the Mississippi, and, rounding into the deep blue waters of the gulf, headed for Barataria. Lafitte had too many friends in New Orleans not to know of the force thus sent against him; and, when the Americans reached Grande Terre, they found the pirates at their batteries, and the Baratarian flotilla drawn up in order of battle. The contest was sharp, but ended in the rout of the Baratarians. Their village was burned, their fortifications razed; and, when the triumphant Americans returned to New Orleans, they brought in their train ten armed prizes and a number of prisoners, although Lafitte was not to be found among the latter. Thereafter, the Baratarians, as an organization, vanished from history.

Lafitte was afterwards occasionally heard of as a desperado on the more western shores of the Mexican Gulf ; and it is further noticeable, that two guns were served by Baratarians under their old lieutenant, Dominique Yon, on that bloody day when Packenham's forces were beaten back on the field of Chalmette.

Early in December the movement of the British upon New Orleans took definite shape. On the 8th of that month, the calm waters of the Gulf of Mexico, off the Chandeleur Islands, were the scene of a grand rendezvous of British naval and military forces. All the vessels of Cockburn's Chesapeake fleet were there, with other men-of-war, transports, and schooners, to the number of fifty vessels. At the head was the towering two-decker "Tonnant," carrying the Admiral's flag. Frigates, corvettes, and sloops-of-war came trooping in the rear ; and the transports bore seven thousand men for the capture of the Southern city. The British were in high good-humor as the anchors were let fall and the ships swung round with their heads to the tide. The voyage across the gulf from the rendezvous at Jamaica had been like a holiday trip. The weather had been fine, and the sea smooth ; and the soft air of that semi-tropical region was a never-ending source of delight to sailors who had been suffering the hardships of a Northern station.

The point at which the British fleet had come to anchor lay about fifty miles due east of New Orleans. In that day of sailing-vessels, no enemy could breast the waters of the rolling Mississippi and crush the resistance of the city's defenders, as did Farragut in 1862. Knowing that they could not hope to take their ships up to the levee of the city, the enemy determined to cast anchor near the entrance of Lake Borgne, and send through a chain of lakes and bayous a mammoth expedition in barges, to a point within ten miles of the city. But this well-laid plan had been betrayed to the Americans by Lafitte ; and a little band of American sailors, under the command of Lieut. Catesby Jones, had taken up a position at the Rigolets, and were prepared to dispute the farther progress of the invading forces. Five gunboats, and one hundred and eighty-five men, constituted the American force, which for a time held the British in check. Finally, the enemy, finding that the swift American cutters could easily evade the lumbering war-vessels, fitted out a fleet of forty-five barges, manned by a thousand veteran British sea-dogs, who had seen

service in half a dozen naval wars. The Americans had news of the contemplated attack, and made skilful preparations to meet it. The gunboats were moored in a fore and aft line, at a point near the Rigolets. Their broadsides bore upon the enemy, and the shallowness of the water was such that by no means could they be surrounded. The sailors were prepared for a desperate conflict, and spent the night before the battle in tricing up the boarding-nettings, sharpening cutlasses, and getting small-arms in good trim. In the morning the British came on to the attack. It was a long pull from the fleet to the place of battle: so their commander brought his flotilla to anchor just out of range of the American guns; and there the grim old veterans devoured their dinners, and took their rations of grog, with appetites undisturbed by the thought of the coming conflict. Dinner over, the enemy weighed anchor, and dashed forward, with long, swift strokes, into the very flashes of the Americans' cannon. The Americans knew that their one chance of victory was to keep the overwhelming forces of their foe out of boarding distance, and they worked their guns with a rapidity born of desperation. Musket-bullets, grape-shot, and canister poured in a murderous fire upon the advancing boats. But the sturdy old British veterans knew that the best way to stop that fire was to get at the base of it; and they pressed on undauntedly, responding vigorously, meanwhile, with their bow guns. Soon they were up to the gunwales of the American flotilla, and the grappling-irons were fixed; then, with sharp blows of cutlasses, deadly play of the pikes, and a ceaseless rattle of small-arms, they poured upon the decks of the Americans. The boarding-nettings could not long check so furious a foe, and fell before the fierce slash of the cutlasses. The decks once gained, the overpowering numbers of the Englishmen crushed all further resistance; and the flotilla was finally taken, after about one hundred of the enemy and fifty Americans had fallen.

The American flotilla being thus shattered, there remained no further obstacle to prevent the landing of the invading army. Of the advance of that brilliant body of veteran troops over sands and marshes, and through sluggish bayous and canals half-full of stagnant water, until they emerged on the bank of the river, nine miles below New Orleans, it is not my purpose to speak further. Nor does an account of Gen. Jackson's vigorous measures of defence and glorious victory come within the

province of this narrative. The interesting story of Jackson's creation of an army from leather-shirted Kentucky riflemen, gay Creoles from the Creole Quarter of the Crescent City, swarthy Spaniards and mulattoes, nondescript desperadoes from the old band of Lafitte, and militia and regulars from all the Southern States, forms no part of the naval annals of the war. It is enough to say that the flower of the British army, led by a veteran of the Peninsula, recoiled before that motley crew of untrained soldiers, and were beaten back, leaving their gallant leader and thousands of their brave men dead upon the field. The navy was not without some share in this glorious triumph. On the 23d of December the schooner "Carolina" dropped down from New Orleans, and opened fire upon the enemy. "Now, then, for the honor of America, give it to them!" sung out her commander, as the first broadside was fired. The attack, unexpected as it was, created a panic in the British camp. A feeble reply was made with rockets and musketry; but even this was soon discontinued, and the enemy took refuge under the steep bank of the levee, whither the plunging shot could not follow them. All night the "Carolina" kept up her fire; and, when at daybreak she moved away, she left the camp of the enemy in confusion. During the day she renewed the attack, and persisted in her fire until the British threw up a heavy battery on the river's bank, and replied. The lads of the "Carolina" promptly accepted the challenge thus offered, and for a time a spirited combat was maintained. But the battery threw red-hot shot, and the schooner was soon set on fire and destroyed. Meanwhile the corvette "Louisiana" had come down to the scene of action, and in the subsequent engagements did some effective work. When the final onslaught of the British was made, on Jan. 7, 1815, the guns of the "Louisiana" were mounted on the opposite bank of the river, and the practised sailors worked them with deadly effect, until the flight of the American militia on that side exposed the battery to certain capture. The sailors then spiked their guns, and marched off unmolested. The sailors of the "Carolina," on that day of desperate fighting, were in the centre of Jackson's line, between the Creoles and the swarthy Baratarians under Dominique Yon. Here they worked their howitzers, and watched the scarlet lines of the enemy advance and melt away before that deadly blaze; advance and fall back again in hopeless rout. And among the many classes of fighting men whom Jackson had rallied before

that British line, none did battle more valiantly for the honor of the nation and the safety of the flowery city of New Orleans than did those blue jackets ashore.

It is a fitting commentary upon the folly of war, that the battle of New Orleans was fought after the two warring nations had signed a treaty of peace. The lives of some hundreds of brave Englishmen and Americans were needlessly sacrificed in a cause already decided. Far across the Atlantic Ocean, in the quaint old Dutch city of Ghent, representatives of England and the United States met, and, after some debate, signed the treaty on the 24th of December, 1814. But there was then no Atlantic cable, no "ocean greyhounds" to annihilate space and time; and it was months before the news of the treaty reached the scene of war. In the mean time, the hostilities were continued by land and sea.

The year 1815 found the American navy largely increased by new vessels, though the vigilance of the British blockaders kept most of these close in port. The "Constitution" was at sea, having run the blockade at Boston. In New York Harbor were the "President," "Peacock," "Hornet," and "Tom Bowline," awaiting a chance to slip out for a cruise to the East Indies. It was decided that the vessels should run out singly, and the "President" was selected to make the first attempt. The night of the 14th of January was dark and foggy, and the blockading fleet was nowhere to be seen. Then, if ever, was the time for escape; and the Yankee tars weighed anchor and started out through the Narrows. In the impenetrable darkness of the night, baffled by head-winds and perplexing currents, the pilots lost their reckoning, and the orders to the man at the wheel were quick and nervous, until an ominous grating of the ship's keel, followed by the loss of headway, told that the frigate was aground. For a time the ship lay helpless, straining all her timbers as each wave lifted her slightly, and then let the heavy hull fall back upon the shoal. By ten o'clock the rising tide floated her off; but, on examination, Capt. Decatur found that she was seriously injured. To return to port was impossible with the wind then blowing: so all sail was crowded on, in the hopes of getting safely away before the blockading squadron should catch sight of the ship. As luck would have it, the blockaders had been forced from their posts by the gale of the day before, and the "President" had laid her course so as to infallibly fall

into their clutches. Before daylight the lookout reported two sail in sight, and at daybreak the ship was fairly surrounded by the enemy's vessels. All at once gave chase to the luckless American; and a few hours were enough to show that her sailing qualities were so seriously injured by her pounding on the bar, that the enemy was rapidly overhauling her. Decatur adopted every known expedient to increase his ship's speed, but to no avail. After she had been lightened by starting the water, cutting away boats and anchors, chopping up and heaving overboard the ponderous cables, together with spars and provisions, the enemy still gained; and the foremost pursuer, a razee, opened fire. The "President" responded with her stern-chasers, but her shot had no effect. "It is said that on this occasion," writes Cooper, "the shot of the American ship were observed to be thrown with a momentum so unusually small, as to have since excited much distrust of the quality of her gunpowder. It is even added, that many of these shot were distinctly seen, when clear of the smoke, until they struck." At six o'clock in the evening, the frigate "Endymion" led the British squadron in chase, and had gained a position so close upon the American's beam that her broadsides were rapidly crippling the fugitive. Thereupon Decatur determined upon a desperate expedient, that sounds like some of his reckless exploits in the war with Tripoli. His plan was to bring the "President" about, and run boldly alongside the enemy. Every thing was to be sacrificed to the end of getting to close quarters. When once the two ships had grappled, the Americans were to board, carry the British ship in a hand-to-hand battle, and then, abandoning the crippled "President," escape in the captured frigate. So desperate a plan needed the cordial co-operation of every man: so it was first presented to the commissioned officers, who gladly embraced the desperate project. The sailors were then sent aft, and Decatur addressed them from the quarter-deck.

"My lads," said he, "that ship is coming up with us. As our ship won't sail, we'll go on board of theirs, every man and boy of us, and carry her into New York. All I ask of you is to follow me. This is a favorite ship of the country. If we allow her to be taken, we shall be deserted by our wives and sweethearts. What, let such a ship as this go for nothing! 'Twould break the heart of every pretty girl in New York."

With hearty cheers, the jackies returned to their guns. All were ready for the coming struggle. Over the main hatch was mounted a howitzer, with its black muzzle peering down into the hold, ready to scuttle the ship when the boarders should spring upon the enemy's deck. The sun, by this time, had sunk below the horizon, and the darkness of night was gathering over the ocean. The two ships surged toward each other,—great black masses, lighted up on either side by rows of open ports, through which gleamed the uncertain light of the battle-lanterns. On the gun-deck the men stood stern and silent; their thoughts fixed upon the coming battle, or perhaps wandering back to the green fields and pleasant homes they had so recently left, perhaps forever. The gray old yeoman of the frigate, with his mates, walked from gun to gun, silently placing a well-sharpened cutlass, a dirk, and a heavy leather boarding-cap at each man's side. The marines were drawn up in a line amidships; their erect, soldierly air and rigid alignment contrasting with the careless slouchiness of the sailors. Butts for the sailors' ridicule as they were during a cruise, the marines knew that, in hand-to-hand conflicts, their part was as dashing as that of their tormentors of the forecastle.

When the "President" had come within a quarter of a mile of her adversary, Decatur perceived that his enemy was determined to decide the contest at long range. As the "President" hauled down nearer, the "Endymion" sheered off, keeping up meanwhile a vigorous cannonade. To this the Americans responded in kind; and so much superior was the gunnery of the Yankee tars, that the rigging of the enemy was seen to be fast going to pieces, while her guns were being silenced one by one. But her fire did sad havoc among the men of the "President," and particularly among the officers. The first broadside carried away Decatur's first lieutenant, Mr. Babbitt, who was struck by a thirty-two-pound shot, which cut off his right leg below the knee, and hurled him through the wardroom hatch to the deck below, fracturing his wounded leg in two places. Shortly after, Decatur was knocked to the deck by a heavy splinter. For some time he lay unconscious; then opening his eyes, and seeing a throng of anxious seamen about him, he ordered them to their stations, and resumed his duties. The fire of the "Endymion" then slackened; and she lay upon the water, with her sails cut

from the yards. At that moment Lieut. Howell turned to a midshipman standing at his side, and said gayly, "Well, we have whipped that ship, at any rate." A flash from the bow of the Englishman followed; and he added, "No: there she is again." The midshipman turned to reply, and saw Howell stretched dead at his feet, killed by the last shot of the battle.

The enemy was now helpless, and it would have been easy enough for the "President" to choose her position and compel her adversary to strike; but the presence of two more Englishmen, rapidly coming up astern, forced the Americans to abandon their prey and continue their flight. It was then late in the evening, and the night was dark and starless. Every light was extinguished on the American frigate, in the hope that by so doing she might slip away under cover of the night. But the British lookouts were sharp-eyed; and by eleven o'clock two frigates had closed in on the

THE "PRESIDENT" TRIES TO ESCAPE.

crippled ship, and a third was rapidly coming up astern. All were pouring in rapid broadsides, and the dark waters were lighted up like a fiery sea by the ceaseless flashing of the guns. Thus surrounded and overpowered, there remained open to the Americans no course but to surrender; and at eleven o'clock at night the "President" made signal that she had struck. Her fate, like that of the "Chesapeake," had accorded with the

superstitious sailors' notion that she was an unlucky ship. In the long running fight, neither the Americans nor the British had escaped without severe loss. On the "President" were twenty-four killed and fifty-six wounded; the first, second, and third lieutenants being among the slain. The "Endymion" had eleven men killed and fourteen wounded. The two frigates were ordered to proceed to Bermuda; but the "President's" bad luck seemed to follow her, for on the way she encountered a terrific gale, by which her masts were carried away, and her timbers so strained that all the upper-deck guns had to be thrown overboard to save the ship.

The loss of the "President," at the very mouth of the New York Harbor, was certainly a most inauspicious opening for the naval operations of 1815. The people of New York and Philadelphia, to whom had come neither the news of peace nor of the glorious success of the American arms at New Orleans, were plunged into despondency. "Now that Great Britain is at peace with Europe," thought they, "she can exert all her power in the task of subjugating America;" and mournful visions of a return to British rule darkened their horizon. But, even while they were thus saddened by Decatur's defeat, a gallant vessel—the monarch of the American navy—was fighting a good fight for the honor of the nation; and out of that fight she came with colors flying and two captive men-of-war following in her wake.

It will be remembered that the "Constitution" left Boston in December, 1814, for an extended cruise. The gallant frigate, always a favorite among man-o'-war's men, carried with her on this cruise a full crew of native Americans,—thorough seamen, and as plucky fighters as ever pulled a lanyard or carried a cutlass. Her course lay due east; and in January, 1815, she was in the Bay of Biscay, where she fell in with, and captured, two prizes. After this she cruised about for a month, without encountering an enemy. American privateers and cruisers had fairly driven British merchantmen from the seas, and the tars of the "Constitution" found their time hanging heavily on their hands. The captain was an able and considerate officer, and much freedom was allowed the jackies in their amusements. With boxing, broadsword, and single-stick play, drill and skylarking, the hours of daylight were whiled away; and by night the men off duty would gather about the forecastle lantern to play with greasy, well-thumbed cards, or warble tender ditties to black-eyed Susans far across

the Atlantic. Patriotic melodies formed no small part of Jack's musical *repertoire*. Of these, this one, written by a landsman, was for a long time popular among the tuneful souls of the forecastle, and was not altogether unknown in the wardroom.

"Now coil up y'r nonsense 'bout England's great navy,
And take in y'r slack about oak-hearted tars;
For frigates as stout, and as gallant crews have we,
Or how came their "Macedon" decked with our stars?
Yes, how came her "Guerriere," her "Peacock," and "Java,"
All sent broken-ribbed to old Davy of late?
How came it? Why, split me, than Britons we're braver;
And that they shall feel, too, whenever we meet.
Then charge the can cheerily,
Send it round merrily:
Here's to our country, and captains commanding;
To all who inherit
Of Lawrence the spirit
Disdaining to strike while a stick is left standing."

Many were the verses of this notable production; for, to be popular in the forecandle, a song must play a lengthy part in "teasing time." One verse, however, is enough to show the manly, if perhaps unreasoning, pride the blue-jackets took in the triumphs of the navy.

But the time of the sailors on this closing cruise of the war was not destined to be spent in sport and singing alone. The noble frigate was not to return to the stagnation of a season of peace in port, without adding yet another honor to her already honorable record. On the morning of the 20th of February, as the ship was running aimlessly before a light wind, some inexplicable impulse led Capt. Stewart to suddenly alter his course and run off some sixty miles to the south-west. Again the "Constitution's" good luck seemed to justify the sailors' belief, for at noon she ran into a group of vessels. The first vessel was sighted on the larboard bow, and, as the frigate overhauled her, proved to be a full-rigged ship. Soon after a second sail, also a ship, was sighted; and a few minutes more sufficed to show that both were men-of-war. The one first sighted was the frigate-built corvette "Cyane," of thirty-four guns; and the second was the sloop-of-war "Levant," of twenty-one guns. For either of

these vessels singly, the "Constitution," with her fifty-two guns and crew of four hundred and fifty men, was more than a match. Yet to attack the two was a bold movement, and this Stewart determined to undertake. Hardly had the character of the strangers been made out, when the corvette was seen making signals to the sloop; and the two vessels, then about ten miles apart, made all sail to get together before the enemy should overhaul them. This juncture was precisely what Stewart wished to prevent; and in a trice the shrill notes of the boatswain's whistle sent the sailors in swarms into the rigging, and the frigate was as if by magic clothed with a broad expanse of canvas. Quickly she felt the effect, and bounded through the water after the distant ships like a dolphin chasing a school of flying-fish. The old tars on the forecastle looked knowingly over the side at the foamy water rushing past, and then cast approving glances aloft where every sail was drawing. But their complacency was shattered by a loud crash aloft, which proved to be the main royal-mast which had given way under the strain. Another spar was rigged speedily, and shipped by the active tars, and soon the snowy clouds aloft showed no signs of the wreck. At sundown the three vessels were so near each other that their colors could be seen. Stewart ran up the stars and stripes, to which the strangers responded by setting the British flag at their mastheads.

The purpose of the enemy was to delay the opening of the action until night should give him opportunity to manœuvre unobserved; but the "Constitution," suspecting this, pressed forward hotly, and opened fire a few minutes after six o'clock. By skilful seamanship Stewart kept the windward gage of both enemies; and the fight opened with the "Cyane" on the port-quarter, and the "Levant" on the port-bow of the American frigate. Fifteen minutes of fierce cannonading followed, the combatants being within musket-shot most of the time. Every gun was engaged; and the heavy broadsides shook the ships, and thundered far over the placid surface of the ocean, which was now faintly illumined by the rising moon. The triangular space between the ships was filled with the dense sulphurous smoke of the burning powder; so that the gunners could see nothing of the enemy at whom they were hurling their ponderous iron bolts. The men in the tops could now and again catch a glimpse of the top hamper of the enemy's ships, but those on the gun-deck were working almost at random. After a few minutes of rapid

firing, the fire of the enemy slackened; and Stewart directed his gunners to cease until the smoke should have cleared away. At this command a silence, almost oppressive after the heavy cannonading, ensued, broken only by the occasional report of a gun from the unseen enemy, sounding like minute-guns of distress. Anxiously Stewart waited for the smoke to blow away. When it did so, the "Cyane" was seen luffing up, to come under the frigate's stern, and get in a raking broadside. The movement was discovered just in time to be checked. Stewart gave a heavy broadside to the "Levant;" then, bracing back his topsails, backed his ship down abreast of the "Cyane," pouring in rapid broadsides, before which the fire of the corvette died away. Two raking broadsides that crashed into the stern of the "Levant" sent that craft out of the action, to refit. The frigate then pressed down upon the "Cyane," and with a few heavy broadsides forced her to strike.

Capt. Douglass of the "Levant" then proved his bravery by standing by his captured consort; although he could have escaped easily, while the "Constitution" was taking possession of her prize. No thought of flight seems to have occurred to the gallant Briton, though he must have known that there was but little hope of his coming out of the combat victorious. Still he gallantly came back into the fight, meeting the "Constitution" ploughing along on the opposite tack. Broadside were exchanged at such close range that the Yankee gunners could hear the ripping of the planks on the enemy's decks as the solid shot crashed through beam and stanchion. Having passed each other, the ships wore, and returned to the attack; but the weight of the American's metal told so severely upon the "Levant" that her flag was hauled down, and, firing a gun to leeward, she gave up the fight.

As an exhibition of seamanship, this action is unrivalled in naval annals. For Stewart to have taken his ship into action with two hostile vessels, and so handle her as not only to escape being raked, but actually rake his enemies, was a triumph of nautical skill. The action was hard fought by both parties. The loss upon the British vessels has never been exactly determined; but it was undoubtedly large, for the hulls were badly cut up by the American's fire. The "Constitution" had but three men killed, and twelve wounded. The officers all escaped unhurt.

After a few hours' pause to repair damages, Stewart took his prizes

BATTLESHIP "MASSACHUSETTS"

into Porto Praya in the Cape Verde Islands, where they arrived on the 10th of March. The day after the ships reached port, a heavy fog settled over the water, cutting off vision in all directions. As the first lieutenant of the "Constitution" was walking the quarter-deck, he heard a young midshipman among the prisoners suddenly exclaim, "There's a large ship in the offing." The lieutenant peered about on every side, but could see nothing, until, looking upward, he saw the top-gallant sails of a large ship moving along above the fog-bank. Capt. Stewart was quickly notified; and, coolly remarking that the stranger was probably a British frigate, he ordered that the men be sent to quarters, and the ship prepared for action. The lieutenant hastened on deck to execute the orders, but had hardly reached his station when he saw the sails of two more ships gliding along above the fog-bank. Hastily he returned to the captain's cabin with the report. Stewart showed no emotion or alarm, although he knew well that the fact that he was in a neutral port would be no protection against the British, should they once discover his presence. The affair of the "Essex" was still fresh in his mind. Calmly he ordered the lieutenant to make sail and take the ship to sea, signalling to the two prizes to follow. The orders were given quietly on deck; and in fifteen minutes the "Constitution," under full press of sail, was making her way out of Porto Praya roads. On the shore were more than a hundred prisoners whom Stewart had landed under parole. Regardless of the dictates of honor, these men rushed to a Portuguese battery, and opened fire on the ships as they passed out. Hearing the cannonade, the lookouts on the enemy's vessels looked eagerly for its cause, and caught sight, above the fog, of the rapidly receding topsails of the fugitives. At this sight the British set out in pursuit; and the fog soon clearing away revealed to the Americans two ships-of-the-line and a frigate following fast in their wake. The "Constitution" and the "Cyane" easily kept out of reach of their pursuers; but the "Levant" dropped behind, and finally, at a signal from Stewart, tacked, and stood back for Porto Praya. The enemy then abandoned the pursuit of the two foremost vessels, and followed the "Levant," but failed to overhaul her before she entered the harbor. This, however, checked the British not a whit. For the laws of nations and the authority of the Portuguese flag that floated over the little town, they cared nothing. Or they came,

and opened fire on the "Levant," which had dropped anchor under what was supposed to be a neutral battery. The Americans soon discovered their error. Not only did the British disregard the neutrality of the port, but the paroled prisoners on shore took possession of the battery, and opened fire upon the beleaguered craft. Thus caught between two fires, no hope remained to the Americans; and, after a few minutes' gallant but useless defence, the flag of the "Levant" was hauled down, and she passed again into the hands of the British.

It was late in May before the "Constitution" reached New York. Peace had then been declared; but none the less were Stewart and his men feasted and honored. The old frigate had won for herself a name ever to be remembered by the people of the nation, in whose service she had received and dealt so many hard knocks. "Old Ironsides," they called her; and even to-day, when a later war has given to the navy vessels whose sides are literally iron, the "Constitution" still holds her place in the hearts of the American people, who think of her lovingly by the well-won title of "Old Ironsides."

While we have been following thus Stewart and his gallant frigate in their final cruise, some smaller vessels were doing good work for the credit of the American flag. It will be remembered, that, when the "President" left New York Bay on her short and disastrous cruise of January, 1815, she left behind her, at anchor, the "Peacock," the "Hornet," and the "Tom Bowline. These vessels, knowing nothing of the fate of their former consort, awaited only the coming of a gale sufficient to drive away the blockading squadron. On the 22d of January it came up to blow; and the three craft, under storm canvas, scudded over the bar, and made for the rendezvous at Tristan d'Acunha. On the way thither they separated, the "Hornet" cruising alone. On the 23d she sighted a strange sail on the horizon, and, clapping on all sail, bore down upon her. At the same time the stranger sighted the "Hornet," and made for her, evidently with hostile intent. The two vessels approached each other until within musket-shot, when the stranger hoisted English colors, and fired a gun. Capt. Biddle of the American ship was ready for the fray, and opened fire with a broadside. The response of the enemy was vigorous and effective. For fifteen minutes the firing was constant; but the enemy, seeing that the Americans were getting the better of the fight, then strove to close and

board. This Biddle determined to avoid, but called up the boarders to beat back the enemy, should they succeed in closing. "At the instant," he writes, in his official report, "every officer and man repaired to the quarter-deck, when the two vessels were coming in contact, and eagerly pressed me to permit them to board the enemy; but this I would not permit, as it was evident, from the commencement of the action, that our fire was greatly superior, both in quickness and effect. The enemy's bowsprit came between our main and mizzen rigging, on our starboard side, affording him an opportunity to board us, if such was his design; but no attempt was made. There was a considerable swell on; and, as the sea lifted us ahead, the enemy's bowsprit carried away our mizzen-shrouds, stern davits, and spanker-boom, and he hung upon our larboard quarter. At this moment an officer called out that they had surrendered. I directed the marines and musketry men to cease firing; and while on the taffrail, asking if they had surrendered, I received a wound in the neck."

This wound, to which the captain so casually alludes, merits more than a passing reference. The fire of both ships had ceased when Biddle stepped upon the taffrail; but he had stood there only a moment, when two or three of the officers on the quarter-deck cried out that a man on the Englishman was aiming at him. Biddle did not hear the caution; but two American marines saw the enemy's movement, and, quickly bringing up their muskets, sent two balls crashing into the brain of the English marksman. He fell back dead, but had fired his piece before falling. The bullet struck Biddle in the neck, inflicting a painful, but not serious, wound. The blood flowed freely, however; and two sailors, rushing up, were about to carry their commander to the cock-pit, when he stopped them. Determined to do something to stanch the flowing blood, a sailor tore his shirt into bandages, with which he bound up his captain's wound. But let us return to Biddle's narrative.

"The enemy just then got clear of us; and his foremast and bowsprit being both gone, and perceiving us wearing to give him a fresh broadside, he again called out that he had surrendered. It was with difficulty that I could restrain my crew from firing into him again, as he had certainly fired into us after having surrendered. From the firing of the first gun, to the last time the enemy cried out that he had surrendered, was exactly twenty-two minutes by the watch. She proved to be His Britannic Majesty's

brig "Penguin," mounting sixteen thirty-two-pound carronades, two long twelves, a twelve-pound carronade on the top-gallant forecastle, with a swivel on the capstan in the tops."

On boarding the prize, Biddle found that she had suffered too severely from the American fire to ever be of service again. He accordingly removed the prisoners and wounded to his own ship, and scuttled the "Penguin." Hardly was this operation accomplished, when two sail were sighted, bearing rapidly down upon the scene of action. Nothing daunted, the lads of the "Hornet" went to their guns, but were heartily glad to find that the two vessels approaching were the "Peacock" and "Tom Bowline." On their arrival, the latter vessel was converted into a cartel, and sent into Rio de Janeiro with prisoners; while the "Hornet" and "Peacock" cruised on toward the Indian Seas. On April 28 a heavy line-of-battle ship was sighted, and gave chase. In the flight the two sloops parted; the "Peacock" going off unmolested, while the "Hornet" fled, hotly pursued by the enemy. For a time it seemed as if the little craft must fall a prey to her huge pursuer, which had come up within a mile, and was firing great shot at the scudding sloop-of-war. Overboard went cables, guns, spars, shot, every thing that would lighten the "Hornet." The sails were wet down, and every thing that would draw was set. By consummate skill Biddle at last succeeded in evading his pursuer; and on the 9th of June the "Hornet" entered New York Bay, without a boat or anchor, and with but one gun left. But she brought the report that the last naval battle of the war had ended in victory for the Americans.

Meanwhile the "Peacock" was returning from a cruise not altogether void of interest. On parting with the "Hornet," she had struck off to the southward, and in the Straits of Sundra, between Borneo and Sumatra, had fallen in with the East India Company's cruiser "Nautilus," of fourteen guns. Between these two vessels an unfortunate and silly rencounter followed. The captain of the "Nautilus" knew of the declaration of peace; and, as the "Peacock" bore down upon his vessel, he shouted through a speaking-trumpet that peace had been declared. To this Capt. Warrington of the "Peacock" paid no attention, considering it a mere ruse on the part of the enemy, and responded by simply ordering the British to haul down their flag. This the Englishman very properly refused to do, and gallantly prepared for the unequal combat. Two

broadships were then interchanged, by which the "Nautilus" was severely cut up, and eight of her crew killed. She then struck her colors. Capt. Warrington, on sending a boat aboard his adversary, found that the declaration of peace was no ruse, but a truthful statement of facts. His conduct had been almost criminally headstrong; and, though he was profuse in formal apologies, the wrong done could never be righted. The "Peacock" then continued her homeward voyage.

When this vessel reached port, the last of the cruisers had returned; and the war was over in fact, as it had long been over technically. It has become the fashion to say that it was a useless war, that served no purpose, because the treaty by which it was ended contained no reference to the hateful doctrine of the right of search, which, more than any thing else, had brought on the conflict. Yet, though the conduct of the war had not led the British to formally renounce their claims in this respect, the exploits of the American navy had shown that the Yankee blue-jackets were prepared to, and would, forcibly resent any attempt on the part of the British to put those claims into practice. The British had entered upon the war gaily, never dreaming that the puny American navy would offer any serious resistance to Great Britain's domination upon the ocean. Yet now, looking back over the three years of the war, they saw an array of naval battles, in the majority of which the Americans had been victorious; and in all of which the brilliancy of American naval tactics, the skill of the officers, and the courage and discipline of the crews, put the younger combatants on a plane with the older and more famous naval service. Fenimore Cooper, in his "History of the Navy of the United States," thus sums up the results of this naval war: "The navy came out of this struggle with a vast increase of reputation. The brilliant style in which the ships had been carried into action, the steadiness and accuracy with which they had been handled, and the fatal accuracy of their fire on nearly every occasion had produced a new era in naval warfare. Most of the frigate actions had been as soon decided as circumstances would at all allow; and in no instance was it found necessary to keep up the fire of a sloop-of-war an hour, when singly engaged. Most of the combats of the latter, indeed, were decided in about half that time. The execution done in these short conflicts was often equal to that made by the largest vessels of Europe in general

actions; and, in some of them, the slain and wounded comprised a very large proportion of their crews. . . . The ablest and bravest captains of the English fleet were ready to admit that a new power was about to appear upon the ocean, and that it was not improbable the battle for the mastery of the seas would have to be fought over again."

CHAPTER XVII.

PRIVATEERS AND PRISONS OF THE WAR.—THE "ROSSIE."—SALEM PRIVATEERS.—THE "GEN. ARMSTRONG" GIVES BATTLE TO A BRITISH SQUADRON, AND SAVES NEW ORLEANS.—NARRATIVE OF A BRITISH OFFICER.—THE "PRINCE DE NEUFCHATEL."—EXPERIENCES OF AMERICAN PRISONERS OF WAR.—THE END.

NO narrative of the naval exploits of the Americans in the second war with Great Britain can be complete without some account of the achievements of the fleets of privateers which for three years swept the seas, destroying a vast amount of the enemy's property; and, while accomplishing their end by enriching their owners, did, nevertheless, much incidental good to the American cause. Seldom has the business of privateering been so extensively carried on as in the War of 1812. For this the reason lay in the rich bait offered by the world-wide commerce of Great Britain, whose fleets whitened every known sea. Privateering must ever be a weapon wielded by the weaker

nation against the stronger. And Congress, in the very Act by which it declared war, authorized the President to issue letters of marque and reprisal to private armed vessels.

The declaration of war had hardly been made public, when the hundreds of ship-yards from Maine to Savannah resounded with the blows of hammers and the grating of saws, as the shipwrights worked, busily refitting old vessels, or building new ones, destined to cruise against the commerce of "John Bull." All sorts of vessels were employed in this service. The Atlantic and Gulf Coasts fairly swarmed with small pilot-boats, mounting one long gun amidships, and carrying crews of twenty to forty men. These little craft made rapid sallies into the waters of the Gulf Stream, in search of British West Indiamen homeward bound. Other privateers were huge three-masters, carrying heavy batteries, and able to outsail any of the enemy's ships. On leaving port for a long cruise, these vessels would carry enormous crews, so that captured vessels might be manned and sent home. After a successful cruise, such a privateer returned to port seldom bringing more than one-fifth of the crew with which she had set out. But the favorite rig for a privateer was that of the top-sail schooner,—such a rig as the "Enterprise" carried during the war with France. The famous ship-yards of Baltimore turned out scores of clean-cut, clipper-built schooners, with long, low hulls and raking masts, which straightway took to the ocean on privateering cruises. The armament of these vessels generally consisted of six to ten carronades and one long pivot-gun, going by the pet name of "Long Tom," mounted amidships. The crew was usually a choice assortment of cut-throats and seafaring vagabonds of all classes,—ready enough to fight if plunder was to be gained, but equally ready to surrender if only honor was to be gained by fighting. Yet history records a few actions in which the privateersmen showed a steadiness and courage worthy of seamen of the regular service.

The limitations of this work do not permit a complete account of the work of the privateers during the war. Although an interesting subject, and one of historical importance, but a few pages can be devoted to it here. Properly treated, it would fill a volume; and, indeed, one of the most noted privateersmen has left a narrative of the exploits of the principal privateers, which forms a very considerable tome. The fact that

two hundred and fifty private armed cruisers under the American flag captured or destroyed over sixteen hundred British vessels will indicate the importance and extent of the subject. For us a mere sketch of the exploits of some of the principal privateers must suffice.

One of the first things to attract the attention of the reader, in the dingy files of some newspaper of 1812-15, is the grotesque names under which many of the privateers sailed. The grandiloquent style of the regular navy vanishes, and in its place we find homely names such as "Jack's Favorite," "Lovely Lass," "Row-boat," "Saucy Jack," or "True-blooded Yankee." Some names are clearly political allusions,—as the "Orders in Council" and the "Fair Trade." The "Black Joke," the "Shark," and the "Anaconda" must have had a grim significance for the luckless merchantmen who fell a prey to the vessels bearing these names. "Bunker Hill" and "Divided we fall," though odd names to sail under, seemed to bring luck to the two vessels, which were very successful in their cruises. "United we stand" was a luckless craft, however, taking only one prize; while the achievements of the "Full-blooded Yankee" and the "Sine qua non" were equally limited. Of the "Poor Sailor," certainly little was to be expected; and it is with no surprise that we find she captured only one prize.

Among the most successful privateers was the "Rossie" of Baltimore, commanded by the Revolutionary veteran Capt. Barney, who left her, finally, to assume command of the American naval forces on Chesapeake Bay. She was a clipper-built schooner, carrying fourteen guns, and a crew of one hundred and twenty men. The destruction wrought by this one cruiser was enormous. In a ninety days' cruise she captured, sunk, or otherwise destroyed British property to the amount of a million and a half dollars, and took two hundred and seventeen prisoners. All this was not done without some hard fighting. One prize—His Britannic Majesty's packet-ship "Princess Amelia"—was armed with nine-pounders, and made a gallant defence before surrendering. Several men were killed, and the "Rossie" suffered the loss of her first lieutenant. The prisoners taken by the "Rossie" were exchanged for Americans captured by the British. With the first body of prisoners thus exchanged, Barney sent a cool note to the British commander at New Brunswick, assuring him that before long a second batch of his captured countrymen should be sent in.

Several Northern seaports shared with Baltimore the business of fitting out and manning privateers. The hardy seamen of Maine and Massachusetts were ever ready for a profitable venture of this kind; and, as the continuation of the war caused the whale-fishery to languish, the sailors gladly took up the adventurous life of privateersmen. The profits of a successful cruise were enormous; and for days after the home-coming of a lucky privateer the little seaport into which she came rang with the boisterous shouts of the carousing sailors. "We still, in imagination, see our streets filled with privateersmen," writes a historian of Portsmouth, "in groups, with blue ribbons tied around their hats, inscribed in large letters, 'SUCCESS TO THE "Fox,"' or whatever vessel they were to sail in. And then another scene, of sailors paid off with so much money that they knew not what to do with it. It was one of these men that, in Market Square, put his arm around a cow, kissed her, and put a five-dollar bill in her mouth, for a good cud. Sometimes they might be seen, finely dressed, walking down the sunny streets, carrying parasols." One Portsmouth privateer came to grief in the West Indies, and was captured by a British vessel of heavier metal. In the hold of the privateer was a considerable sum of money in gold coin, the existence of which was known only to the captain and his body-servant, a bright negro. The British, on capturing the vessel, put a prize-crew on board, and, while taking the Yankee captain upon their own ship, left his negro servant on the prize. Watching his opportunity, the negro brought up the gold coin, and dropped it unobserved into a tub of greasy black slush with which he had been slushing down the masts. Some days later, the captured vessel reached the port to which she had been sent, and was tied up at a wharf to await condemnation. The faithful servant lingered about the ship for a time, saying that he had no place to go. At last he was gruffly ordered to leave; but, before going, he astonished the mate by begging for the tub of slush, which he said might enable him to earn a few cents along the docks. The mate carelessly told him to take the stuff, and be off; which he promptly did, carrying away with him his tub of slush, with its concealed treasure. It is worthy of note, that this negro, far from home and from the owners of the money, paid it into a bank to the credit of the captain whom he had served.

Salem, Mass., was another great port for privateers to hail from. Not

less than twenty-five of these predatory gentry fitted out at the quiet little seaside village; and, when the war was ended, few of the inhabitants were unable to tell some tale of personal adventures, cruising against the enemy. Indeed, Salem had the honor of receiving the first prize captured on the ocean after the declaration of war; for into the harbor came, on the 10th of June, 1812, the trim privateer schooner "Fame," followed close by two ships, from the halliards of which waved the British flag surmounted by the stars and stripes. Then the whole town turned out as one man to greet and cheer the captors; but, long before the war was ended, the appearance of a prize in the harbor aroused little excitement. One of the most successful of the rovers sailing from this port was the "Dolphin," whose record during the war shows a list of twenty-two captured vessels. Her faculty for making long cruises, and turning up in the most unexpected places, made her the dread of all British sea-captains. She was manned by a gallant set of lads, who had no fear of hard fighting; and many of her prizes were won at the cannon's mouth. In January, 1813, the "Dolphin" fell in with a British ship and brig cruising together off Cape St. Vincent. Though the enemy outnumbered the privateersmen, and carried heavier metal, yet the "Dolphin" went gallantly into the fight, and after a severe battle succeeded in taking both vessels. Great was the astonishment of the British at being thus snapped up by a Yankee privateer almost under the guns of the Rock of Gibraltar. The luckless Britons were carried to America as prisoners; but so kind was the treatment they met with at the hands of the privateers, that on leaving the "Dolphin," at Boston, they published a card in which they said, "Should the fortune of war ever throw Capt. Stafford or any of his crew into the hands of the British, it is sincerely hoped he will meet with similar treatment."

Perhaps the foremost of all the fighting privateers was the "Gen. Armstrong" of New York; a schooner mounting eight long nines and one long twenty-four on a pivot. She had a crew of ninety men, and was commanded on her first cruise by Capt. Guy R. Champlin. This vessel was one of the first to get to sea, and had cruised for several months with fair success, when in March, 1813, she gave chase to a sail off the Surinam River on the coast of South America. The stranger seemed to evince no great desire to escape; and the privateer soon gained

sufficiently to discover that the supposed merchantman was a British sloop-of-war, whose long row of open ports showed that she carried twenty-seven guns. Champlin and his men found this a more ugly customer than they had expected; but it was too late to retreat, and to surrender was out of the question: so, calling the people to the guns, Champlin took his ship into action with a steadiness that no old naval captain could have exceeded. "Close quarters and quick work," was the word passed along the gun-deck; and the "Armstrong" was brought alongside her antagonist at a distant of half pistol-shot. For nearly an hour the two vessels exchanged rapid broadsides; but, though the American gunners were the better marksmen, the heavy build of the sloop-of-war enabled her to stand against broadsides which would have cut the privateer to pieces. Capt. Champlin was hit in the shoulder early in the action, but kept his station until the fever of his wound forced him to retire to his cabin. However, he still continued to direct the course of the action; and, seeing that the tide of battle was surely going against him, he ordered the crew to get out the sweeps and pull away from the enemy, whose rigging was too badly cut up to enable her to give chase. This was quickly done; and the "Gen. Armstrong," though badly injured, and with her decks covered with dead and dying men, escaped, leaving her more powerful adversary to repair damages and make the best of her way home. Capt. Champlin, on his arrival at New York, was the hero of the hour. For a privateer to have held out for an hour against a man-of-war, was thought a feat worthy of praise from all classes of men. The merchants of the city tendered the gallant captain a dinner, and the stockholders in his vessel presented him with a costly sword.

But the "Gen. Armstrong" was destined to fight yet another battle, which should far eclipse the glory of her first. A new captain was to win the laurels this time; for Capt. Champlin's wound had forced him to retire, and his place was filled by Capt. Samuel C. Reid. On the 26th of September, 1814, the privateer was lying at anchor in the roadstead of Fayal. Over the land that enclosed the snug harbor on three sides, waved the flag of Portugal, a neutral power, but unfortunately one of insufficient strength to enforce the rights of neutrality. While the "Armstrong" was thus lying in the port, a British squadron, composed of the "Plantagenet" seventy-four, the "Rota" thirty-eight, and "Carnation"

eighteen, hove in sight, and soon swung into the harbor and dropped anchor. Reid watched the movements of the enemy with eager vigilance. He knew well that the protection of Portugal would not aid him in the least should the captain of that seventy-four choose to open fire upon the "Armstrong." The action of the British in coming into the harbor was in itself suspicious, and the American had little doubt that the safety of his vessel was in jeopardy. While he was pacing the deck, and weighing in his mind the probability of an assault by the British, he caught sight of some unusual stir aboard the hostile ships. It was night; but the moon had risen, and by its pale light Reid saw four large barges let fall from the enemy's ships, and, manned by about forty men each, make toward his vessel. In an instant every man on the privateer was called to his post. That there was to be an attack, was now certain; and the Americans determined not to give up their vessel without at least a vigorous attempt to defend her. Reid's first act was to warp his craft under the guns of a rather dilapidated castle, which was supposed to uphold the authority of Portugal over the island and adjacent waters. Hardly had the position been gained, when the foremost of the British boats came within hail, and Capt. Reid shouted, "Boat ahoy! What boat's that?" No response followed the hail; and it was repeated, with the warning, "Answer, or I shall fire into you." Still the British advanced without responding; and Reid, firmly convinced that they purposed to carry his ship with a sudden dash, ordered his gunners to open on the boats with grape. This was done, and at the first volley the British turned and made off. Capt. Reid then warped his vessel still nearer shore; and bending springs on her cable, so that her broadside might be kept always toward the enemy, he awaited a second attack. At midnight the enemy were seen advancing again, this time with fourteen barges and about five hundred men. While the flotilla was still at long range, the Americans opened fire upon them with the heavy "Long Tom;" and, as they came nearer, the full battery of long nine-pounders took up the fight. The carnage in the advancing boats was terrible; but the plucky Englishmen pushed on, meeting the privateer's fire with volleys of musketry and carronades. Despite the American fire, the British succeeded in getting under the bow and quarter of the "Armstrong," and strove manfully to board; while the Americans fought no less bravely to keep them back. The attack became a furious hand-to-hand

battle. From behind the boarding-nettings the Americans thrust pikes, and fired pistols and muskets, at their assailants, who, mounted on each other's shoulders, were hacking fiercely at the nettings which kept them from gaining the schooner's deck. The few that managed to clamber on the taffrail of the "Armstrong" were thrust through and through with pikes, and hurled, thus horribly impaled, into the sea. The fighting was fiercest and deadliest on the quarter; for there were most of the enemy's boats, and there Capt. Reid led the defence in person. So hot was the reception met by the British at this point, that they drew off in dismay, despairing of ever gaining the privateer's deck. Hardly did Reid see the enemy thus foiled on the quarter, when a chorus of British cheers from the forecastle, mingled with yells of rage, told that the enemy had succeeded in effecting a lodgement there. Calling his men about him, the gallant captain dashed forward and was soon in the front rank of the defenders, dealing furious blows with his cutlass, and crying out, "Come on, my lads, and we'll drive them into the sea." The leadership of an officer was all that the sailors needed. The three lieutenants on the forecastle had been killed or disabled, else the enemy had never come aboard. With Reid to cheer them on, the sailors rallied, and with a steady advance drove the British back into their boats. The disheartened enemy did not return to the attack, but returned to their ships, leaving behind two boats captured and two sunk. Their loss in the attack was thirty-four killed and eighty-six wounded. On the privateer were two killed and seven wounded.

But the attack was not to end here. Reid was too old a sailor to expect that the British, chagrined as they were by two repulses, were likely to leave the privateer in peace. He well knew that the withdrawal of the barges meant not an abandonment, but merely a short discontinuance, of the attack. Accordingly he gave his crew scarcely time to rest, before he set them to work getting the schooner in trim for another battle. The wounded were carried below, and the decks cleared of splinters and wreckage. The boarding-nettings were patched up, and hung again in place. "Long Tom" had been knocked off his carriage by a carronade shot, and had to be remounted; but all was done quickly, and by morning the vessel was ready for whatever might be in store for her. The third assault was made soon after daybreak. Evidently the enemy despaired of

his ability to conquer the privateersmen in a hand-to-hand battle; for this time he moved the brig "Carnation" up within range, and opened fire upon the schooner. The man-of-war could fire nine guns at a broadside, while the schooner could reply with but seven; but "Long Tom" proved the salvation of the privateer. The heavy twenty-four-pound shots from this gun did so much damage upon the hull of the brig, that she was forced to draw out of the action; leaving the victory, for the third time, with the Americans.

But now Capt. Reid decided that it was folly to longer continue the conflict. The overwhelming force of the enemy made any thought of ultimate escape folly. It only remained for the British to move the seventy-four "Plantagenet" into action to seal the doom of the Yankee privateer. The gallant defence already made by the Americans had cost the British nearly three hundred men in killed and wounded; and Reid now determined to destroy his vessel, and escape to the shore. The great pivot-gun was accordingly pointed down the main hatch, and two heavy shots sent crashing through the bottom. Then applying the torch, to make certain the work of destruction, the privateersmen left the ship, giving three cheers for the gallant "Gen. Armstrong," as a burst of flame and a roar told that the flames had reached her magazine.

This gallant action won loud plaudits for Capt. Reid when the news reached the United States. Certainly no vessel of the regular navy was ever more bravely or skilfully defended than was the "Gen. Armstrong." But, besides the credit won for the American arms, Reid had unknowingly done his country a memorable service. The three vessels that attacked him were bound to the Gulf of Mexico, to assist in the attack upon New Orleans. The havoc Reid wrought among their crews, and the damage he inflicted upon the "Carnation," so delayed the New Orleans expedition, that Gen. Jackson was able to gather those motley troops that fought so well on the plains of Chalmette. Had it not been for the plucky fight of the lads of the "Gen. Armstrong," the British forces would have reached New Orleans ten days earlier, and Packenham's expedition might have ended very differently.

The "Plantagenet" and her consorts were not the only British men-of-war bound for New Orleans that fell in with warlike Yankee privateers. Some of the vessels from the Chesapeake squadron met a privateer, and

a contest ensued, from which the American emerged with less glory than did the lads of the "Gen. Armstrong." A young British officer in his journal thus tells the story:—

"It was my practice to sit for hours, after nightfall, upon the taff-rail, and strain my eyes in the attempt to distinguish objects on shore, or strange sails in the distance. It so happened that on the 30th I was tempted to indulge in this idle but bewitching employment even beyond my usual hour for retiring, and did not quit the deck till towards two o'clock in the morning of the 31st [of October]. I had just entered my cabin, and was beginning to undress, when a cry from above of an enemy in chase drew me instantly to the quarter-deck. On looking astern I perceived a vessel making directly after us, and was soon convinced of the justice of the alarm, by a shot which whistled over our heads. All hands were now called to quarters, the small sails taken in; and having spoken to our companion, and made an agreement as to position, both ships cleared for action. But the stranger, seeing his signal obeyed with so much alacrity, likewise slackened sail, and, continuing to keep us in view, followed our wake without approaching nearer. In this state things continued till daybreak,—we still holding our course, and he hanging back; but, as soon as it was light, he set more sail and ran to windward, moving just out of gun-shot in a parallel direction with us. It was now necessary to fall upon some plan of deceiving him; otherwise, there was little probability that he would attack. In the bomb, indeed, the height of the bulwarks served to conceal some of the men; but in the transport no such screen existed. The troops were therefore ordered below; and only the sailors, a few blacks, and the officers kept the deck. The same expedient was likewise adopted in part by Capt. Price of the 'Volcano;' and, in order to give to his ship a still greater resemblance than it already had to a merchantman, he displayed an old faded scarlet ensign, and drew up his fore and main sail in what sailors term a lubberly manner.

"As yet the stranger had shown no colors, but from her build and rigging there was little doubt as to her country. She was a beautiful schooner, presenting seven ports of a side, and apparently crowded with men,—circumstances which immediately led us to believe that she was an American privateer. The 'Volcano,' on the other hand, was a clumsy, strong-built

ship, carrying twelve guns; and the 'Golden Fleece' mounted eight: so that in point of artillery the advantage was rather on our side; but the American's sailing was so much superior to that of either of us, that this advantage was more than counter-balanced.

"Having dodged us till eight o'clock, and reconnoitred with great exactness, the stranger began to steer gradually nearer and nearer, till at length it was judged that she was within range. A gun was accordingly fired from the 'Volcano,' and another from the transport; the balls from both of which passed over her, and fell into the sea. Finding herself thus assaulted, she now threw off all disguise, and hung out an American ensign. When putting her helm up, she poured a broadside with a volley of musketry into the transport, and ran alongside of the bomb, which sailed to windward.

"As soon as her flag was displayed, and her intention of attacking discerned, all hands were ordered up; and she received two well-directed broadsides from the 'Volcano,' as well as a warm salute from the 'Golden Fleece.' But such was the celerity of her motion, that she was alongside of the bomb in less time than can be imagined, and actually dashing her bow against the other, attempted to carry her by boarding. Capt. Price, however, was ready to receive them. The boarders were at their posts in an instant; and Jonathan finding, to use a vulgar phrase, that he had caught a Tartar, left about twenty men upon the 'Volcano's' bowsprit, all of whom were thrown into the sea, and filling his sails sheered off with the same speed with which he had borne down. In attempting to escape, he unavoidably fell somewhat to leeward, and exposed the whole of his deck to the fire of the transport. A tremendous discharge of musketry saluted him as he passed; and it was almost laughable to witness the haste with which his crew hurried below, leaving none upon deck except such as were absolutely wanted to work the vessel.

"The 'Volcano' had by this time filled and gave chase, firing with great precision at his yards and rigging, in the hope of disabling him. But, as fortune would have it, none of his important ropes or yards were cut; and we had the mortification to see him in a few minutes beyond our reach."

An exploit of yet another privateer should be chronicled before the subject of the private armed navy can be dismissed. On the 11th of October,

1814, the brigantine privateer "Prince de Neufchatel," seventeen guns, was encountered near Nantucket by the British frigate "Endymion," — the same ship which was so roughly handled by the "President" in her last battle. About nine o'clock at night, a calm having come on, the frigate despatched a boarding party of a hundred and eleven men in five boats to capture the privateer. The latter vessel was forty men; but this handful of Yankee tars the attack. The guns were charged with boarding-nettings triced up, and cutlasses the crew. As the British came on, the notwithstanding which the enemy dashed fiercely to gain the deck.

But in this they were foiled by the gallantry of the defenders, who fought desperately, and cut down the few British who managed to gain a foothold. The conflict was short, and the discomfiture of the enemy complete.

PRISON CHAPLAIN AND JAILOR.

After but a few minutes' fighting, one boat was sunk, one captured, and the other three drifted helplessly away, filled with dead and dying. The total loss of the British in this affair was twenty-eight killed and thirty-seven wounded. Of the crew of the privateer, seven were killed, and nine only remained unhurt.

A narrative of the exploits of, and service done by, the American sailors in the War of 1812 would be incomplete if it said nothing of the sufferings of that great body of tars who spent the greater part of the war season confined in British prisons. Several thousand of these were thrown into confinement before the war broke out, because they refused to serve against their country in British ships. Others were prisoners of war. No exact statistics as to the number of Americans thus imprisoned have ever been made public; but the records of one great prison—that at Dartmoor—show, that, when the war closed, six thousand American seamen were imprisoned there, twenty-five hundred of whom had been detained from long before the opening of the war, on account of their refusal to join the ranks of the enemy. As I write, there lies before me a quaint little book, put out anonymously in 1815, and purporting to be the “Journal of a Young Man captured by the British.” Its author, a young surgeon of Salem, named Waterhouse, shipped on a Salem privateer, and was captured early in the war. His experience with British prisons and transport-ships was long; and against his jailors he brings shocking charges of brutality, cruelty, and negligence.

The Yankee seamen who were captured during the war were first consigned to receiving-prisons at the British naval stations in America. Sometimes these places of temporary detention were mouldering hulks, moored in bays or rivers; sometimes huge sheds hastily put together, and in which the prisoners were kept only by the unceasing vigilance of armed guards. “The prison at Halifax,” writes Waterhouse, “erected solely for the safe-keeping of prisoners of war, resembles an horse-stable, with stalls, or stanchions, for keeping the cattle from each other. It is to a contrivance of this sort that they attach the cords that support those canvas bags or cradles, called hammocks. Four tier of these hanging nests were made to hang, one above the other, between these stalls, or stanchions. . . . The general hum and confused noise from almost every hammock was at first very distressing. Some would be lamenting their hard fate at being shut up like negro slaves in a Guinea ship, or like fowls in a hen-coop, for no crime, but for fighting the battles of their country; others, late at night, were relating their adventures to a new prisoner; others, lamenting their aberrations from rectitude, and disobedience to parents, and headstrong wilfulness, that drove them to sea,

contrary to their parents' wish; while others, of the younger class, were sobbing out their lamentations at the thoughts of what their mothers and sisters suffered after knowing of their imprisonment. Not unfrequently the whole night was spent in this way; and when, about day-break, the weary prisoner fell into a doze, he was waked from his slumber by the grinding noise of the locks, and the unbarring of the doors, with the cry of '*Turn out! All out!*' when each man took down his hammock, and lashed it up, and slung it on his back, and was ready to answer to the roll-call of the turnkey."

From prisons such as this, the prisoners were conveyed in droves to England, in the holds of men-of-war and transports. Poorly fed, worse housed, and suffering for lack of air and room, their agony on the voyage was terrible. When they were allowed a few hours' time on deck, they were sure to arouse the anger of the officers by turbulent conduct or imprudent retorts. "One morning as the general and the captain of the '*Regulus*' (transport) were walking as usual on the quarter-deck, one of our Yankee boys passed along the galley with his kid of burgoon. He rested it on the hatchway while he adjusted the rope ladder to descend with his swill. The thing attracted the attention of the general, who asked the man how many of his comrades eat of that quantity for their breakfast. 'Six, sir,' said the man, 'but it is fit food only for hogs.' This answer affronted the captain, who asked the man in an angry tone, 'What part of America he came from?' 'Near to Bunker Hill, sir, if you ever heard of that place,' was the answer." On another occasion, a Yankee and a slightly wounded British marine got into a dispute, and came to blows. The British captain saw the occurrence, and accused the American of cowardice in striking a wounded man. "I am no coward, sir," said the Yankee. "I was captain of a gun on board the '*Constitution*' when she captured the '*Guerriere*,' and afterward when she took the '*Java*.' Had I been a coward, I should not have been there."

On one occasion the prisoners on the transport "*Crown Prince*," lying in the River Medway, took an uncontrollable dislike to the commander of a second transport lying close alongside. Their spite was gratified quickly and with great effect. The rations served out to the luckless captives at that time consisted of fish and cold potatoes. The latter edible being of rather poor quality, the prisoners reserved for missiles; and the obnoxious

officer could not pace his quarter-deck without being made a mark for a shower of potatoes. Vainly did he threaten to call up his marines and respond with powder and lead: the Americans were not to be kept down; and for some days the harassed officer hardly dared to show himself upon deck.

The place of final detention for most of the prisoners taken in the war with America was Dartmoor Prison; a rambling collection of huge frame buildings, surrounded by double walls of wood. The number of prisoners confined there, and the length of time which many of them had spent within its walls, gave this place many of the characteristics of a small State, with rulers and officials of its own. One of the strangest characters of the prison was King Dick, a gigantic negro, who ruled over the five or six hundred negro prisoners. "He is six feet five inches in height," says one of the prisoners, "and proportionally large. This black Hercules commands respect, and his subjects tremble in his presence. He goes the rounds every day, and visits every berth, to see if they all are kept clean. When he goes the rounds, he puts on a large bear-skin cap, and carries in his hand a huge club. If any of his men are dirty, drunken, or grossly negligent, he threatens them with a beating; and if they are saucy they are sure to receive one. They have several times conspired against him, and attempted to dethrone him; but he has always conquered the rebels. One night several attacked him while asleep in his hammock: he sprang up, and seized the smallest by his feet, and thumped another with him. The poor negro, who had thus been made a beetle of, was carried the next day to the hospital, sadly bruised, and provokingly laughed at." King Dick, to further uphold his dignity as a monarch, had his private chaplain, who followed his royal master about, and on Sundays preached rude but vigorous sermons to His Majesty's court. On weekdays the court was far from being a dignified gathering. King Dick was a famous athlete, and in the cock-loft, over which he reigned, was to be seen fine boxing and fencing. Gambling, too, was not ruled out of the royal list of amusements; and the cries of the players, mingled with the singing of the negroes, and the sounds of the musical instruments upon which they played, made that section of the prison a veritable pandemonium.

But although some few incidents occurred to brighten momentarily the dull monotony of the prisoners' lot, the life of these unfortunate men,

while thus imprisoned, was miserable and hateful to them. Months passed, and even years, but there seemed to be no hope for release. At last came the news of the declaration of peace. How great then was the rejoicing! Thoughts of home, of friends and kindred, flooded the minds of all; and even strong men, whom the hardships of prison-life had not broken down, seemed to give way all at once to tears of joy. But the delays of official action, "red-tape," and the sluggishness

THE LAST VOLLEY OF THE WAR.

of travel in that day, kept the poor fellows pent up for months after the treaty of peace had been announced to them. Nor were they to escape without suffering yet more severely at the hands of their jailors. Three months had passed since peace had been declared; and the long delay so irritated the prisoners, that they chafed under prison restraint, and showed evidences of a mutinous spirit. The guards, to whom was intrusted the difficult task of keeping in subjection six thousand impatient

and desperate men, grew nervous, fearing that at any moment the horde of prisoners would rise and sweep away all before them. An outbreak was imminent; and the prisoners were like a magazine of gunpowder, needing but a spark of provocation to explode. On April 6, 1815, matters reached a crisis. The soldiers, losing all presence of mind, fired on the defenceless Americans, killing five men and wounding thirty-four. Thus the last blood shed in the War of 1812 was the blood of unarmed prisoners. But the massacre, horrible and inexcusable as it was, had the effect of hastening the release of the survivors; and soon the last of the captives was on his way home to the country over which peace at last reigned again.

CHAPTER XVIII.

THE LONG PEACE BROKEN BY THE WAR WITH MEXICO.—ACTIVITY OF THE NAVY.—CAPTAIN STOCKTON'S STRATAGEM.—THE BATTLE AT SAN JOSÉ.—THE BLOCKADE.—INSTANCES OF PERSONAL BRAVERY.—THE LOSS OF THE "TRUXTON."—YELLOW FEVER IN THE SQUADRON.—THE NAVY AT VERA CRUZ—CAPTURE OF ALVARADO.

THE period of peace which followed the close of the War of 1812 was, perhaps, the longest which any nation has ever enjoyed. For the navy of the United States, it was a time of absolute peace, inactivity, even stagnation. The young nation was living literally up to Washington's rule of avoiding entanglements abroad, and its people looked with suspicion on the naval branch of the service which had rendered such a good account of itself in the war with Great Britain. They feared to build and man ships lest possession of a navy might prove an incentive to war. And so when war did come—war, not with Europe, but with our nearest neighbor—the United States had little floating force to join in. Fortunately, little was needed.

Though war was not declared by the United States against Mexico until May, 1846, it had been a possibility ever since the establishment of the Texan Republic by the defeat of the Mexicans at San Jacinto in 1834, and it had been a great probability since 1841, when it was discovered that both England and France were holding out prospects of assistance to the Mexi-

cans in case of conflict with the United States. Neither of these European powers was sincere in the diplomatic game which deceived the proud but ignorant Mexicans, but neither did either of them scruple to foment a quarrel out of which some selfish, though indefinite, advantage might be gained. Indeed they played the diplomatic game so skilfully that they deceived a considerable minority in the United States and made these believe that the admission of Texas to the United States would be unwise and inexpedient, and the probable war with Mexico a wickedness dire and dreadful. Even General Grant, when he wrote his book, said that such were his views at the time, though he was then an army officer and trusting to war for advancement. But when hostilities were begun, and victory for American arms followed victory, the protests of the peace party were unheard amid the enthusiastic shoutings of those who took a saner view of the conditions which led to the conflict.

Mexico claimed title not only to Texas, but to California, and if the United States had not gone to war in regard to the former, she would have had to do so in defence of her conquest of the latter. In securing California the navy bore a conspicuous part, and as early as 1842, Captain Thomas Ap-Catesby Jones, commanding the Pacific squadron, was as active as though war had already been declared. In September of that year, with his squadron of four ships, he was at anchor in the harbor of Callao, and noticing the suspicious conduct of the British frigate "Dublin," which shoved off the port and then bore away, he concluded to follow her and see just what game she sought, as he had been informed by the Navy Department that England was plotting in Mexico against the United States; he had also read in a Mexican newspaper that war was likely to be declared, if indeed hostilities had not already begun. Captain Jones reached Monterey on the 19th of October, and though he saw nothing of the "Dublin," he at once insisted on the surrender of the place. The next day he learned that his action had been premature and made what amends he could. So the navy really struck the first official blow that led to this war.

When war had been declared, the Pacific squadron did not learn of it until after the victories of Palo Alto and Resaca de la Palma. Captain Sloat, in command, at once took prompt action. Landing two hundred and fifty seamen and marines under Captain Mervine, he captured Monterey on

the 2d of July. A week later he formally took possession of the splendid bay of San Francisco and the neighboring country. He also occupied Sutter's Fort, on Sacramento River, and the towns of Bodega and Sonoma. In this war it will be noticed throughout this narrative that the naval forces were constantly required to do shore duty, a duty to which they were unaccustomed but which they performed with entire efficiency. The Mexicans had no navy worthy of the name and the American sailors were auxiliary to the soldiers. Though untrained to this kind of service, and though it was always hard, and sometimes quite ungrateful, they responded to orders with entire cheerfulness; when the service was most perilous then the blue-jackets entered upon it with a gayety that laughed at danger.

On the 19th of July, Fremont and his corps of topographical engineers met Captain Sloat and thereafter co-operated with him. In the "Cyane," Commander Du Pont, Fremont was sent to San Diego with one hundred and fifty riflemen and that place was occupied. On the 30th of July, the "Congress" took possession of San Pedro, the port of Los Angeles, the seat of the Mexican government in California. About this time the command of the Pacific squadron devolved upon Captain Robert F. Stockton, who was not a whit less vigilant than his predecessors had been. Having all the California seaports, Captain Stockton planned an expedition against Los Angeles before the well-armed Mexican soldiers in the province could be brought together. He landed three hundred and fifty sailors and marines and established a camp at San Pedro. Captain Stockton's biographer says: "There were only about ninety muskets in the whole corps. Some of the men were armed with carbines, others had only pistols, swords, or boarding-pikes. They presented a motley and peculiar appearance, with great variety of costume. Owing to their protracted absence from home the supplies of shoes and clothing had fallen short, and the ragged and diversified colors of their garments, as well as the want of uniformity in their arms and accoutrements, made them altogether a spectacle both singular and amusing." The Mexican forces at Los Angeles outnumbered Captain Stockton's land forces three to one, so he resorted to a stratagem to deceive the enemy as to his force. A flag of truce having appeared on the hills, "he ordered all his men under arms and directed them to march three or four abreast, with intervals of considerable space between each squad, directly in the line of vision of the approaching messengers; to

the rear of some buildings on the beach, and thence to turn in a circle and continue their march until the strangers had arrived. Part of the circle described in the march was concealed from view, so that to the strangers it would appear that a force ten times greater than the actual number was defiling before them. When the two bearers of the flag of truce had arrived he ordered them to be led up to him alongside of the artillery, which consisted of several six-pounders and one thirty-two-pound carronade. The guns were all covered with skins so as to conceal their dimensions except the huge mouth of the thirty-two-pounder at which the captain was stationed to receive his guests. . . . As his purpose was intimidation he received them with much sternness." They asked for a truce, but Stockton demanded and secured an immediate and absolute surrender, as the evident object of the Mexicans was to gain time. Stockton at once began his tedious march to Los Angeles, his men dragging the cannon through the sand. On the 12th of August, he received a message from the Mexican general, saying "if he marched on the town he would find it the grave of his men." He replied: "Then tell your general to have the bells ready to toll at eight o'clock in the morning. I shall be there at that time." He was as good as his word. The next morning he was joined by Fremont and his men, who had come up from San Diego and they entered Los Angeles unopposed. He organized a civil government for the entire state, with Major Fremont as the head of it, and returning to his ships sailed northward on the 5th of September, 1846. The news of these operations was sent to Washington overland by the famous scout, Kit Carson.

Meantime the other ships of the Pacific squadron were cruising along the coast and capturing everything with a semblance of Mexican ownership. But Captain Stockton was much disconcerted in October to learn that two Mexican generals, released on parole after the fall of Los Angeles, had gathered a force and were besieging the small garrison there. The "Savannah" at once went to the scene. At San Pedro it was learned that the garrison had been compelled to capitulate and was awaiting an American cruiser. Captain Mervine, of the "Savannah," landed a detachment of sailors and marines and began the march to the capital. He could not cope with the superior force and had to retire. Indeed nearly all the places captured by the active sailors seemed likely now to fall into the hands of the Mexicans again.

The garrison at Monterey was threatened by an uprising of the people; the garrison at San Diego was besieged; Los Angeles was in the hands of the enemy, and the force at the enemy's camp at San Bernardino was getting stronger each day. But Captain Stockton was equal to all demands upon him and made up for inadequate forces by celerity of movement. Just when matters were most critical the naval forces learned of the repulse of General Stephen Kearny by the Mexicans under Pico. It was indeed with great difficulty that Kearny and his dragoons were rescued by the sailors from their invested position near San Bernardino.

Having got what men he could together, Captain Stockton determined to recapture Los Angeles. On the 29th of December, 1846, he began his march of 145 miles to the capital. There were no roads, but the route was through deep ravines, sand-hills, and deserts. The men were poorly armed and badly clothed, and there were few horses to assist in drawing the artillery. Never did an American commander have before him a more disagreeable prospect. The men, many of them without foot-covering, became worn-out in the march and begged to rest, but the captain insisted that they must go on, as the Mexicans were getting stronger every day. The men responded as best they could.

On the 7th of January, the intrepid Stockton found that the enemy was intrenched between him and the San Gabriel River. The Mexican general changed his mind and crossed the river with the object of interrupting the crossing. But Stockton would not be denied, and repulsed the enemy on every side, though outnumbered three to one. This was on the 8th of January, the anniversary of the battle of New Orleans. The next day he fought again, resisting three furious charges of the enemy. On the 10th he entered Los Angeles unopposed, and on the 15th he was joined there by Fremont and his corps. These seaports in California were not seriously harassed during the remainder of the war, but they needed to be garrisoned, while the whole coast required watching. A part of the squadron was sent south and also into the Bay of California. Before the end of 1847 every Mexican gun on the western coast, save those at Acapulco, had been silenced. Loreto, La Paz, Mazatlan, San Blas, Manzanilla, San Antonio, Guaymas, and Mulye fell to the squadron. Sometimes it only needed for a ship or two to appear before a town and it would surrender, but generally an assault or the

appearance of a storming party on land was necessary. But the seamen and marines were always invincible in this part of the war, where they were entirely without aid from the army.

The most serious predicament in which the Americans found themselves in this Pacific Coast campaign was when Lieutenant Heywood, of the "Dale," with four midshipmen and twenty marines, were shut up in the Mission House at San José, a small village near San Lucas. He was surrounded by a large force before he knew it, and two of his midshipmen were taken unawares and captured by an enemy not known to be near. Lieutenant Heywood maintained himself from the 19th of November, 1847, till the 17th of February, 1848, when Commander Du Pont, in the "Cyane," came to his rescue. A party of ninety-four seamen and marines, under Lieutenant Rowan, went ashore and fought its way against six hundred Mexicans until they were defeated and Heywood and his men rescued. There was nothing after this on the western coast more serious than guerilla forays.

The operations on the western coast were probably, in result, much more important than those of the home squadron in the Mexican Gulf and the Rio Grande River. But the latter squadron was the larger, and as it was in constant co-operation with the conquering armies which finally captured the capital of the country, much more has been heard of the doings of the fleet in the east, which was at first commanded by Commodore David Conner and then by Commodore Matthew C. Perry. The operations on this coast also came in for much criticism, for the various ships were filled with young men overflowing with valor and mad with desire of glory. They were also comparatively close to home and saw the newspapers from New York, Washington, and New Orleans. In these papers the army was accorded all the glory while the navy was almost ignored. This neglect rankled in the minds of the madcaps, and they blamed Commodore Conner, an officer of much experience and distinguished record, for not storming every fort and citadel near the coast instead of carrying out his instructions to maintain an efficient blockade of the ports and to co-operate with the army whenever possible. These duties, tiresome and inglorious as they seemed, were of the first importance to the scheme of the campaign, and they were performed with a patience which rose superior to weariness, sickness, and death. The duty required of the blockaders did not require much fighting, but the men were in danger of

the coast fevers all the time, and hundreds died. And then at some seasons the fleet was likely to be blown ashore by the fierce "northers" which prevailed. Many accidents resulted during these storms, the most serious being the capsizing of the brig "Somers," Lieutenant Raphael Semmes (afterward commanding the Confederate ship "Alabama") commanding, and the loss of more than half her crew.

When the war began at Palo Alto, Commodore Conner was with his squadron off Point Isabel, at the mouth of the Rio Grande River. Not knowing the issue of the battle, five hundred seamen and marines were sent to strengthen the garrison at Point Isabel, where the army supplies were stored, while Captain Aulick, of the "Potomac," with two hundred men, pulled up the Rio Grande in boats for fifteen miles and until a junction with the army was established at Barita. At this time the squadron consisted of the frigates "Cumberland" (flagship), "Potomac," and "Raritan"; the steam frigate "Mississippi"; the sloops-of-war "Falmouth," "John Adams," and "St. Mary's"; the steam-sloop "Princeton"; and the brigs "Lawrence," "Porpoise," and "Somers." Before the close of the war some of these ships were recalled, at least one was wrecked, and the squadron was from time to time largely reinforced.

The squadron, now that war had begun, was ordered to blockade the ports of Matamoras, on the Rio Grande; Tampico, on the Tampico River; Alvarado, on the Alvarado; Coatzacoalcas, on the river of the same name; Tabasco, on the Tabasco River; and Vera Cruz, on the Gulf. The rivers mentioned, except the Rio Grande, are mere creeks, not fit for vessels of any size, and their mouths simply open roadsteads. Vera Cruz was the only place with anything like a harbor. The ports in Yucatan, such as Laguna and Campechy, were only visited for supplies of fresh meat. The State of Yucatan was not assisting in the war and did not need to be blockaded. By the time General Taylor took possession of Matamoras, Commodore Conner's fleet had been considerably augmented by the addition of the sloops-of-war "German-town," "Albany," "Saratoga" and "Decatur"; the steamers "Spitfire," "Vixen," "Alleghany," "Scorpion" and "Scourge"; the brig "Truxton"; the gunboats "Reefer," "Bonita," and "Rebel." A little later, and just before the bombardment of Vera Cruz, the "Ohio," with seventy-four guns, joined, together with the bomb-vessels "Vesuvius," "Hecla," and "Strom-

boli." There were also a number of small steamers and gunboats to operate in shallow water. These constituted what was called the "mosquito fleet." With so formidable a fleet the sailors felt they were equal to anything, and whenever a larger part of it was operating at one place, it was difficult to restrain the men. The youngsters even thought Commodore Conner's prudence and conservatism to be timidity, and the writer has before him now a book written twenty-five years after these events, by one who was a midshipman on the flagship, and he quotes the familiar lines about daring to put things to the touch. All this was most unfair, but it indicated that the blue jackets of the Mexican War were buttoned over hearts that knew no fear.

The blockade of the Mexican ports that was maintained was not by any means a paper blockade. It was actual, and the very opposite of the merely formal closing of ports which the United States had so long protested against in other countries. The hardships of the men and officers were fearful and the casualties very great. The tediousness of the service was relieved now and again by daring expeditions into the rivers and ports, where boats were cut out and taken away from beneath batteries on shore. The record of such ventures shows that the navy in 1846 and 1847 was no whit inferior in dash to the one which made the flag glorious some years before in the war with England. One instance of such a venture is quoted from the "Recollections of a Naval Officer," by Captain William Harwar Parker. He was telling of the blockade at Vera Cruz in 1846. He says: "One of the finest fellows in the service I often met on Green Island. I allude to Passed Midshipman Hynson, of Maryland. He was drowned in the brig 'Somers,' when she capsized in the fall of this year. At the time of her sinking, Hynson had both of his arms bandaged and in a sling, and was almost helpless. It was said that when the brig sank he managed to get hold of a spar with another man, and finding it would not support two he deliberately let go his hold. It was like him. The way he happened to have his arm in a sling was this: While the 'Somers' was maintaining the blockade of Vera Cruz, a vessel managed to slip in—I think she was a Spanish schooner. The Mexicans moored her to the walls of the Castle of San Juan for safety; but the officers of the 'Somers' resolved to cut her out or burn her. Hynson was the leading spirit in the affair, though Lieu

tenant James Parker, of Pennsylvania, was the senior officer. They took a boat one afternoon and pulled in to visit the officers of an English man-of-war lying under Sacrificios Island. It was quite usual to do this. After nightfall they left the British ship and pulled directly for the schooner, which they boarded and carried. This, he it observed, was directly under the guns of the castle and the muskets of its garrison. The crew was secured, and finding the wind would not serve to take the vessel out, it was resolved to burn her. Her captain made some resistance, and the sentinel on the walls called out to know what was the matter. Parker, who spoke Spanish remarkably well, replied that his men were drunk and he was putting them in irons. The party then set fire to the vessel and got safely away with their prisoners. It was in setting fire to the schooner that Hynson got so badly burned."

In regard to the personal heroism shown by Hynson and others when the "Somers" went down, Lieutenant Raphael Semmes, in his book, "Service Afloat and Ashore During the Mexican War," said: "Those men who could not swim were selected to go into the boat. A large man by the name of Seymour, the ship's cook, having got into her, he was commanded by Lieutenant Parker to come out, in order that he might make room for two smaller men, and he *obeyed the order*. He was afterward permitted to return to her, however, when it was discovered that he could not swim. Passed Midshipman Hynson, a promising young officer, who had been partially disabled by a bad burn received in firing the 'Creole' a few days previously, was particularly implored to go into the boat. A lad by the name of Nutter jumped out of the boat and offered his place to Hynson, and a man by the name of Powers did the same thing. Hynson refusing both offers, these men declared that then others might take their places, as they were resolved to abide in the wreck with him. Hynson and Powers were drowned. Nutter was saved. When the plunge was made into the sea, Sailing-Master Clemson seized a studding-sail boom, in company with five of the seamen. Being a swimmer, and perceiving that the boom was not sufficiently buoyant to support them all, he left it and struck out alone. He perished—the five men were saved."

Just about this time the first of the gunboats reached the squadron, and the young men of the steerage were intensely amused at the smallness of the

NEW U.S. TORPEDO-BOAT "TALBOT"

vessel. A midshipman from the flagship visited the "Reefer." He went alongside of her in the barge, and, not knowing any better, stepped over her port-quarter. Lieutenant Sterrett, in command, said in his least gentle voice: "Sir, there is a gangway to this vessel!" Before long even the youngsters learned to respect these little steamers. Commodore Conner now made an expedition to capture Alvarado, but just as he was about ready to begin a bombardment his pilots predicted a "norther," and he hoisted the signal, "Return to the anchorage off Vera Cruz." This was popularly regarded as a *fiasco*, but doubtless the Commodore was entirely right, as Alvarado might be taken at any time, and subsequently was taken in a manner which has been a joke in the navy ever since. Of this something will presently be said. Tampico, a town of 7,000 inhabitants, 210 miles north of Vera Cruz, was next proceeded against. The bar at the mouth of the Tampico River is considered the most dangerous on the coast, and the larger vessels did not try to cross it. But the smaller steamers and gun-boats of the "mosquito fleet" went in, and the town was surrendered without firing a shot. It was then occupied by the army. The next movement was against Frontera, at the mouth of the Tabasco River, and Tabasco, some seventy miles up that little stream. Frontera was taken by surprise, and Commodore Perry, now second in command to Commodore Conner, moved up the stream with vessels of too heavy draught. He came near losing the "Cumberland" in the mud, and, as it was, she was so disabled that when she was pulled from her perch on a bar she had to be sent home for repairs. Perry, however, defeated the Mexican flotilla and captured all the boats. Two of the prizes had to be blown up, but the "Champion," a fast river boat, which had run between Richmond and Norfolk, was taken out and afterward usefully employed as a despatch-boat. In this expedition there was considerable fighting and also some losses both of officers and men.

In blockading the port of Tuspan, some 120 miles northwest of Vera Cruz, the brig "Truxton," Captain Carpenter, was stationed. The ship was blown ashore and was under the Mexican guns. The Captain sent a boat to tell the Commodore of the disaster, but before relief could reach him he surrendered. In doing this he was opposed bitterly by all his officers, and the quartermaster on duty positively refused to obey the order to haul down the flag. Lieutenant Bushrod Hunter, who first went for assistance, reached

the squadron off Vera Cruz, as did also Lieutenant Otway Berryman, with a boat's crew, which left before the surrender had been effected. The remainder of the crew were taken to Vera Cruz as prisoners of war. As soon as Commodore Conner heard of the disaster he sent Captain Engle with the "Princeton" to Tuspan. He made short work of it. He drove the Mexicans out of the brig, took what armament was left, and then burned her. The guns taken out of the "Truxton" were placed in forts erected to protect Tuspan. But these were captured next year by Commodore Perry and Captain Breese. The officers and men of the navy had a grudge against Tuspan, and the landing detachment which carried the works fought as though each man in it were a demon. It lost three killed, while five officers and six seamen were wounded.

During the summer of 1847, the men of the squadron operating in the Gulf suffered severely from yellow fever and also from scurvy brought on by a lack of fresh food. It was so bad on the "Mississippi" that she had to be sent to Pensacola. Commodore Perry was himself stricken, but he refused to leave, and changed his flag to the "Germantown," which remained. This was after the fall of Vera Cruz, and when the duty of the naval forces was once again only that of blockaders. The investment of Vera Cruz was the most considerable single piece of work performed by the navy during the war. Commodore Conner had gathered at Vera Cruz all his available forces and anxiously awaited the coming of General Scott and his army, who were at Lobos Island, 150 miles north of Vera Cruz. General Taylor, with 5,000 men, had just defeated Santa Anna with 20,000 men at Buena Vista, and two days later, that is, on the 24th of February, 1847, General Scott gave his final orders to his fleet of transports which was to take his army to Vera Cruz. Early in March the transports with 12,600 men arrived in front of Vera Cruz. Captain Parker, in his book previously quoted, says: "No words can express our excitement as ship after ship crowded with enthusiastic soldiers successively came in; some anchoring near us and others continuing on for the anchorage at Anton Lizardo. We had been so long on our ships, and for some months so inactive, that we were longing for something to do. I cannot answer for others, but the scene of that day—and I recollect that it was Sunday—is so vivid, and the events so firmly fixed in my memory, that I can almost see

the ship "Diadem" as she grazed our spanker-boom in her desire to pass near enough to speak us, and I can to this day whistle the waltz played by an infantry band on board a transport anchored near us that night, though I have never heard it since."

Indeed, the naval contingent was most anxious to be in some of the heavy fighting, and the chance seeming near, all was enthusiasm aboard the ships of the squadron. A few days after General Scott's arrival he and Commodore Conner and a large number of principal officers, including Captain Joseph E. Johnston, of the "Engineers," made a reconnaissance to decide on the best place to land the army. They selected the mainland abreast of Sacrificios Island.

On the 9th of March, the steamers "Spitfire" and "Vixen" and several gunboats ran close in-shore and shelled the sand-hills and chaparral in which the enemy might be concealed. Only a few horsemen were made to scamper away. The Government for this very landing had sent out a number of surf-boats, flat on the bottom and sharp at both ends. Each of these carried one hundred men with their arms and accoutrements. They proved most admirable for the service, as the whole army was landed with out a mishap, and, singularly enough, the Mexicans did not molest the Americans in the least while this important movement was in progress. By midnight of the 9th of March the whole of the army was ashore. Landing the troops having been accomplished, the work of taking the artillery pieces, the ammunition, and supplies was begun, and this consumed a week, each day lasting from four in the morning till ten at night.

While this was in progress, General Scott was so arranging his troops that he should entirely invest the city, and by the 20th of March the bombardment began. General Scott summoned the authorities to surrender, and gave them a chance to send the women and children out of the city. Both invitation and opportunity were declined. And so it came about that many non-combatants were killed in the siege that followed. The sailors not only had to land the army and the materials of war, but they were obliged to help get the siege guns in place. The blue-jacket ashore is nearly always alive to the importance of having a lark, and even in this arduous service they acted very much as though they were on a spree. On one occasion a "norther" came up, and for several days the seamen could

not get back to their ships. Being idle they had a good time to their hearts' content. It is said that before the end of the first day every Jack of them had a horse and was a mounted marine. One of these, a very tough old salt, had for his charge: donkey, and on this animal he rode by General Scott's quarters in great pride. "Some officers standing by observing that he was, as they thought, seated too far back, called out to him to shift his seat more amidships." 'Gentlemen,' said Jack, drawing rein, 'this is the first craft I ever commanded, and it's d—d hard if I can't ride on the quarter-deck.'"

But there was more serious work immediately in store for the navy than fetching and carrying for the army and rewarding themselves in boyish pranks. The day before the serious bombardment began the squadron was notified by signal from the flagship: "Commodore Perry commands the squadron." There was rejoicing at this, for Perry was regarded as a man who preferred a fight for its own sake rather than to have no fight at all. In this command he proved that he was a good fighter, but he proved also that he knew how to be conservative when necessity made such a course wise. Commodore Conner went home because his health demanded that he should. The Navy Department was not dissatisfied with him. But the opportunity for heavy fighting came after Perry took the command. From the beginning of the siege the fleet kept up a heavy firing on the city and castle so as to divert the fire from the land forces.

General Scott soon saw that his guns were not strong enough to batter down the walls of the city, so he requested Commodore Perry to send him some heavy guns. The Commodore's gallant reply was: "Certainly, General, but I must fight them." And fight them he did, as we shall see. Six heavy pieces of ordnance were landed, and about 200 seamen and volunteers were attached to each gun. Three of these were sixty-eight-pounder shell guns and three thirty-two-pounder solid-shot guns. Each of these guns weighed about three tons. Now each of these had to be dragged through the loose sand, almost knee-deep, for something like three miles before it could be put in the position the engineers had assigned to it. This battery, by the way, was protected by bags of sand piled on each other, and this was the first time that this device had been used. When the battery was in position the officers and men of the ships were so anxious to fight it that, to prevent

jealousy, the officers first to be assigned drew lots for the honor. The first day Captain Aulick commanded, and the next day Captain Mayo. The naval battery fired with such precision that they did amazing damage to the enemy's works, and on the second day the guns in Vera Cruz were silenced. Then began a parley as to terms, but on the 28th there was an unconditional surrender. Now Scott had a foothold in the part of Mexico which counted for something, and he was able to begin that masterly march through the Valley of Mexico and on to the capital of the country. But he never could have obtained this foothold without the assistance of the navy. The country did not recognize this at once, and the newspapers being printed by landmen, all of the immediate glory was bestowed on General Scott.

Now that Vera Cruz had fallen and General Scott's plans called for a movement toward the interior, it was most desirable for him to have better cavalry. But he lacked horses. Singular as it may seem, he called upon the navy to assist in supplying this deficiency. It was known that there were Mexican horsemen in and about Alvarado, so it was determined to proceed against this place by land and sea, so that the town could be reduced, and the horses secured at the same time. General Quitman, with a brigade, was sent by land, so as to keep the horsemen from running away, while the "Potomac," Captain Aulick, and the "Scourge," Lieutenant Charles G. Hunter, were sent to appear in front of Alvarado. It was evidently intended that Captain Aulick and General Quitman would move on the place on some appointed day. Lieutenant Hunter did not know what the plans were, and as his boat was much faster than the "Potomac" he arrived in front of Alvarado long before Captain Aulick. When the "Potomac" did come in sight, a great commotion was noticed in the harbor. The "Albany," which had been doing blockading service, came out and informed Captain Aulick that Alvarado had been taken.

"By whom?" asked the Captain.

"By Lieutenant Hunter, in the 'Scourge,'" was the reply.

The "Scourge," it should be explained, was a very small steamer, carrying one gun and forty men. Hunter went up pretty close and observing indications of flinching, he fired three guns and dashed boldly in and captured the place. The horsemen, the capture of whom was the main object of the expedition, were frightened off before General Quitman could intercept

them. Having taken possession of Alvarado, Lieutenant Hunter placed in the town a garrison consisting of a midshipman and two men, and hurried his steamer up the river to a place called Tlacotalpan, which he also captured. When General Quitman arrived in Alvarado with his brigade and the place was gravely handed over to him by Passed Midshipman William G. Temple (afterward a very distinguished officer of high rank) he was greatly amused and laughed heartily. But Commodore Perry was annoyed and angry. As soon as he could get hold of Hunter—not an easy matter, as Hunter had gone on his conquering way still further up the river with the intention of taking all the rest of Mexico not subjugated by Taylor and Scott—he placed him under arrest and preferred charges against him. When Hunter was shortly tried by court-martial, he was sentenced to be reprimanded by the Commodore, the reprimand to be read from the quarter-deck of every vessel in the squadron.

The reprimand, prepared by Commodore Perry, was thought by pretty nearly all the officers of the squadron to be entirely too severe. A military offence had been committed, but it amounted to a mere trifle, and the time was ripe for the people to laugh over such an occurrence. In effect the reprimand was something like this: "Who told you to take Alvarado? You were sent to watch Alvarado, not to take it. You have taken Alvarado with but a single gun and not a marine to back you!" Then the announcement was made that the squadron would soon move against Tabasco, and that Hunter should not accompany it, but that he should be dismissed the squadron. And he was sent home. In New York the people made a hero of him, giving him swords and dinners, and securing for him the command of the schooner "Taney," in which he made a roving cruise to the Mediterranean. As long as he lived he was always spoken of as "Alvarado" Hunter. A sense of humor is sometimes a dangerous cargo for a public man to carry; but the absence of it also is often dangerous. In this instance Commodore Perry, because he did not see the amusing aspect of Hunter's escapade, made himself so ridiculous that he came near cutting short his own career, which, as will afterward be seen in this history, was destined for greater achievements than any in the past.

The next objective point for the navy was Tuspan, where the "Truxton" had been lost. The bar at Tuspan is dangerous, and even the small steamers

of the squadron had their masts hoisted out of them to lighten them. Commodore Perry hoisted his flag on the "Spitfire" and led the way up the river with the boats of the squadron in tow. The first fort on the river below the town, called the Pana, was silenced by the gun of the "Spitfire" and then stormed by the sailors; two other forts were taken in the same way and the town was occupied. The Mexicans made a spirited defence, but did little damage, only one man being killed. Among the wounded were Captain Tatnall, Commander Whittle, and Lieutenant James Parker. The guns taken from the "Truxton" were found in one of the forts and restored to the fleet.

The last naval operation of the war was against Tabasco. Commodore Perry took all of the fleet which could possibly go up the river from Frontera. This town was easily captured, but when the ascent of the river began the boats were continually fired upon from the trees and chaparral along the banks. At a place called Devil's Bend, the passage of the river was interrupted by a surken obstruction, technically called a *chevaux de frise*. Commodore Perry did not mean to let this stop him, so he organized a land force of seamen and marines and concluded to march to Tabasco. He had numerous skirmishes, but was not stopped. One day his own ships passed him, the *chevaux de frise* having been raised by attaching rubber bags to it and then inflating them with air. When Perry arrived at Tabasco he found the American flag flying, the town having fallen without resistance to his own ships. So his own arduous march across country had been all for nothing. This was the last work of the sailors, but the marines of the navy still saw glorious service, as a detachment of them was with General Scott, participating in the attack on Chapultepec. They were also among the first to enter the City of Mexico when that capital surrendered.

The navy in the War with Mexico did itself credit as it always had before, and reflected honor upon the country, whose flag was upheld with brilliant courage and untiring zeal.

CHAPTER XIX.

THE NAVY IN PEACE.—SURVEYING THE DEAD SEA.—SUPPRESSING THE SLAVE TRADE.—THE FRANKLIN RELIEF EXPEDITION.—COMMODORE PERRY IN JAPAN.—SIGNING OF THE TREATY.—TROUBLE IN CHINESE WATERS.—THE KOSZTA CASE.—THE SECOND FRANKLIN RELIEF EXPEDITION.—FOOTE AT CANTON.—“BLOOD IS THICKER THAN WATER.”

AFTER the Mexican War the navy engaged for twelve years in works of peace varied by a little exciting police duty on the high seas. Much was done for commerce and for civilization in the years immediately succeeding 1848, but the story, though important, is not exciting, and is therefore little known. The records of these years afford a fair suggestion of what a navy may do when actual fighting is not necessary, and when its vessels, with the trained sailors and scientists who man them, may be utilized in utilitarian work.

Shortly after the close of the Mexican War, the armed ship “Supply,” under command of Lieutenant Lynch, sailed on an expedition to the Dead Sea. The start was made from New York, and the vessel arrived in the Mediterranean only a few weeks after peace had been declared with Mexico. At Smyrna, Lieutenant Lynch left the “Supply,” and went to Constantinople to obtain permission to enter the Turkish domains. This having been granted, the party sailed for Haifa. Arriving at this port on the 21st of March, they left their ship, and set out for the Sea of Galilee by an overland route, carrying on trucks the boats which had been specially built for naviga-

tion in the river Jordan. Upon reaching Tiberias, on the western shore of the Sea of Galilee, the party divided, one detachment embarking in the boats to navigate the Sea of Galilee, and the other mounting camels and horses to make the trip by land, with the intention of keeping those who had sailed in view as much as possible, and protecting them from attacks by wandering Arabs or aiding them if necessary in the passage of the tortuous and turbulent Jordan. Eight days were consumed in making this passage, and a distance covered of 200 miles, although if the trip had been made in a straight line instead of along the winding course of the river, it would have been necessary to have traversed only sixty miles. An encampment was established on the desolate banks of the Dead Sea, and several exploring and scientific expeditions in the neighborhood were made. Among the interesting facts gathered was the exact depression of the Dead Sea below the level of the ocean. This was found to be 1,312 feet.

The western coast of Africa was the scene of the next important activity on the part of the American cruisers. The slave-trade, which in the eighteenth century had assumed extensive proportions, still flourished to a degree which made the condition upon the coast a disgrace to civilization. It was a notorious fact, moreover, that a large proportion of the vessels in the trade were of American build and sailed under the Stars and Stripes. The United States Government was anxious to wipe out this blot upon the nation's fair fame; and consequently, in 1849, sent Lieutenant Foote, in command of the brig "Perry," to African waters. The lieutenant, who, by the way, afterward became the distinguished Admiral Foote, at once began active cruising off Ambrig, a notorious slave mart. The "Perry" was constantly at sea, chasing and boarding suspicious vessels, and very often her boats passed through the surf and ran up the jungle-bordered rivers to the slave barracoons. Many large slavers were captured, and when, in 1851, the "Perry" was succeeded on the African coast by the squadron under Commander Gregory, Lieutenant Foote had effectually checked the slave trade. He was thanked for his services by the Secretary of the Navy.

While Lieutenant Foote was sailing under the blazing sun of Africa, another lieutenant, Edwin J. De Haven, in command of the brigs "Rescue" and "Advance," was pushing his way northward through the ice of the Arctic

Ocean. The Navy Department had considered it proper and fitting to aid England in her search for the British commander, Sir John Franklin and his men, who had sailed into the Arctic regions on an exploring expedition, and had been gone so long as to warrant the belief that they were in grave peril, if not already dead. Volunteers for the relief expedition had been called for by the department. Lieutenant De Haven and others had responded, and on May 24th, 1850, started on their errand of mercy. In July, the party was in Baffin's Bay, and here the brigs remained embedded in the ice for twenty-one days. On the 29th of July, by a sudden movement of the floe, an opening at the north presented itself; a northeast breeze sprang up at the same time, and with press of sail the brigs were able to force their way into clear water.

For a month afterward there was continual battling with the ice, and slow progress northward. On August 27th, Lieutenant De Haven, having in the mean time fallen in with several English relief expeditions, decided to make a search on the shores adjacent to a Lancaster Sound. Here were found three graves, and various signs that Franklin and his companions had spent a winter somewhere thereabouts; but there were no indications of the course his vessels, the "Erebus" and the "Terror," had taken when they had sailed away. Throughout the winter the search was continued, and the "Rescue" and the "Advance" were often in imminent danger of destruction in the masses of ice which pressed against the sides of the ships with enormous force. "Every moment," said Lieutenant De Haven, in his report, "I expected the vessels would be crushed or overwhelmed by the masses of ice forced up far above our bulwarks." But at last, on June 6th, they forced their way again into the open sea; and as the instructions had been not to spend a second winter in the Arctic regions, sail was set for home, and late in the summer of 1851 the brigs arrived at New York.

The sending of the frigate "Mississippi," commanded by Captain Matthew G. Perry, to the coast of Halifax, in 1852, averted what threatened to be serious trouble. A dispute had arisen among the American and Canadian fishing schooners in those waters, and seven American vessels had been seized by the British cruisers.

This caused intense indignation in New England; but Captain Perry poured oil upon the troubled waters, and in 1854, as a result of his visit,

a reciprocity treaty between the United States and Canada was signed, and this lasted for ten years.

Captain Perry performed his most important services for the government, however, in Japan. The early fifties were an era of exploring expeditions for the navy. There were trips up the rivers into unknown regions of South America and Africa. The Isthmus of Darien was explored, and an ambitious scheme to cut a ship-channel through was found to be impracticable. It was very natural, during this activity in penetrating little-known parts of the world, that attention should have been given to Japan, which was a land of mystery to the world at large because of the exclusion of foreigners from that country. In 1852, Captain Perry was assigned the command of the squadron cruising in the East Indies, and was empowered, in addition to his ordinary duties, to make a display of force in the waters of Japan in order to obtain better treatment for American seamen cast upon Japanese shores, and to gain entry into Japanese ports for vessels seeking supplies. He bore a letter, moreover, from the President of the United States to the Emperor of Japan, written with a view to obtaining a treaty providing for friendly intercourse and commerce with the haughty island kingdom. On the 8th of July, the squadron, comprising the frigates "Mississippi," "Susquehanna," and "Powhatan"; the corvette "Macedonian"; the sloops-of-war "Plymouth," "Saratoga," and "Vandalia"; and the store-ships "Supply," "Southampton," and "Lexington," anchored off the city of Uraga, in the Bay of Jeddo, Japan. Captain Perry decided that the proper course to pursue with the Japanese was to assume a very lofty and commanding tone and bearing. He therefore ordered away from the sides of his vessel the boats which swarmed around it, and allowed none but government officials of high rank to come on board. He himself remained in seclusion in his cabin, treating with the Japanese through intermediaries. He moved his squadron nearer the capital than was allowable, and then demanded that a special commission, composed of men of the highest rank, be appointed to convey his letter from the President to the Emperor. The close proximity of the ships-of-war to the capital, and Captain Perry's peremptory demand, were not at all to the liking of the Japanese; but they were greatly impressed with his apparent dignity and power, and at last consented to receive and consider the letter. Fearing treachery, Captain Perry moved his ships up so that their guns would com-

mand the building prepared for his reception, and on the 14th of July went ashore with an escort of 400 officers and men, who found themselves, on landing, surrounded by about 6,000 Japanese soldiers under arms.

Three months were given to the Japanese officials to reply to the letter, and Captain Perry sailed with his squadron for the coast of China. He returned after an interval of three months, and anchored his ships beyond Uraga, where the previous conference had been held, and nearer the capital, despite the fact that a place twenty miles below had been appointed for the second meeting. The Japanese demurred at this, being so exclusive that they did not wish their capital nor their country even to be seen by foreigners. Instead of respecting these wishes, Captain Perry approached still nearer, until he was only eight miles from Tokio. This high-handed policy had the desired effect. Five special Japanese commissioners met Captain Perry, and in a building within range of the ships' guns, negotiations were carried on. They resulted, on March 31st, in the signing of a treaty by the Japanese, in which they promised to open two of their ports to American vessels seeking supplies; to give aid to seamen of the United States wrecked upon their shores; to allow American citizens temporarily residing in their ports to enter, within certain prescribed limits, the surrounding country; to permit consuls of the United States to reside in one of the open ports; and, in general, to show a peaceful and friendly spirit toward our government and citizens. This treaty is important, because it opened the door for the peoples of the world to a country which has since proved to be possessed of vast wealth and resources. Captain Perry received high praise for his firmness and diplomacy in the conduct of the difficult negotiations.

One vessel of Captain Perry's fleet, the "Plymouth," had remained at Shanghai when the squadron returned to Japanese waters, and she played a very active though brief part in the troubles which then existed in China. Imperial and revolutionary troops were fighting for supremacy, and the former showed a hostile disposition to the American and English residents of Shanghai. An American pilot was captured by an Imperial man-of-war, but was retaken in a most spirited manner from the Chinese by Lieutenant Guest, and a boat's crew from the "Plymouth." The Chinese manifestations of hostility toward foreign residents continued, and on the 4th of April,

1854, about ninety men from the "Plymouth" and American merchant-ships, under the leadership of Commander Kelly, went ashore, and in conjunction with one hundred and fifty men from a British man-of-war, began an attack upon the Imperial camp. The Americans had two field-pieces and a twelve-pound boat-howitzer, which, together with the muskets, were used so effectively that, after ten minutes of sharp fighting, the Chinese fled in great disorder, leaving a number of dead and wounded upon the field. The American loss was two killed and four wounded.

Piracy was rampant in the China seas during this period, and so bold and ferocious were the Chinese desperadoes that their junks were a great terror to merchant vessels, and seriously interfered with commerce. The "Powhatan," another of Captain Perry's squadron, and the English sloop "Rattler," joined forces against a fleet of piratical junks off Khulan, in 1855, and completely destroyed them, killing many of the pirates in the attack and taking a large number of prisoners. In Happy Valley, Hong-Kong, a monument was erected to commemorate the eight English and American sailors who were killed in the conflict.

While the East India squadron was performing these important and gallant services off the coasts of Japan and China, the other vessels of the navy were by no means idle. Among the conspicuous naval events of the time was the spirited action of Commander Ingraham at Smyrna, in 1854. A young Austrian, Martin Koszta, had lived in New York city two years before, and had declared his intention of becoming an American citizen. He had gone to Smyrna on business, and having incurred the displeasure of the Austrian government, had been seized, and was a prisoner on board the Austrian man-of-war "Hussar." Commander Ingraham, commanding the sloop-of-war "St. Louis," demanded that Koszta be surrendered, on the ground that he was an American citizen. This being refused, Ingraham cleared for action, although the "Hussar's" force was much superior to his own. His bold stand brought the Austrians to satisfactory terms, and the threatened engagement was averted by the surrender of Koszta.

There were two Arctic expeditions in addition to that of the "Rescue" and the "Advance" in the early fifties. Both of them grew out of the ill-fated Arctic explorations of Sir John Franklin. Lady Franklin, his wife, was anxious, upon the failure of the first relief expeditions, to send another, and

she asked that a surgeon of the United States Navy, Dr. Kane, be permitted to command it. The Navy Department granted the request, and in June, 1853, the expedition, composed of eighteen men under orders from the department and the patronage of Henry Grinnell, of New York, and George Peabody, the American merchant, of London, began the northwest journey. This search for Sir John Franklin's ships was also unsuccessful, and the relief party was for a long time in imminent danger of a fate similar to Franklin's. After living for two winters imprisoned in the ice in Smith's Sound, they abandoned their vessel, which had been largely broken up to provide fuel, and started on a journey over the ice in sledges. After eighty-four days of extreme privation and thrilling adventure, they reached Driscoll Bay, where they were found by Commander Hartstone and Lieutenant Simms, commanding respectively the "Release" and the "Arctic," which vessels had been fitted out by order of Congress to rescue them. In October, 1855, the united party reached New York.

In November, 1855, the presence of the United States ship "German-town," commanded by Captain Lynch, in the harbor of Montevideo, prevented an extensive massacre. There had been a rebellion in Paraguay, and the insurrectionists had capitulated. The government troops rushed upon them with the intention of despatching them, when a detachment of United States marines interfered and put an end to the sanguinary scene. Three years afterward the marines performed efficient services in Montevideo in protecting foreign residents against the insurgents in another rebellion.

The rather curious episode of a battle-ship fighting Indians occurred in 1856. The sloop-of-war "Decatur," Commander Gansevoort, anchored off Seattle, Washington, to protect the settlers from attacks from a large body of Indians. The savages appeared, and fought the marines, who had landed, with much spirit for six hours. At nightfall they disappeared in the woods, having suffered the loss of a large number of braves.

One of the most gallant and important of the minor operations of the navy took place in November of the same year. Trouble having arisen between the Chinese authorities of the City of Canton and the English officials in the vicinity, it was thought that American interests might be injured, and in consequence Commander Foote stationed his vessel, the sloop-of-war "Portsmouth," of the squadron under Flag-Officer Armstrong, near

the island of Whampoa, and thence proceeded, in several armed boats, to ascend the river to Canton to establish an armed neutrality. Several Americans, however, joined the British in an attack upon the governor's palace, and planted the flag beside the English colors on the wall of the city. Commander Foote disavowed this act, but as he was returning from an interview with the flag-officer at Whampoa, several shots of grape and canister were fired from the forts upon his boat, although it displayed the American flag. The next day the "Portsmouth" and the "Levant," which had come up the river to lend her aid, proceeded to the Canton barrier forts to avenge the insult. The "Levant" grounded before coming in range of the forts; but the "Portsmouth," under a sharp fire, sailed on until within about 500 yards of the nearest fort; then she opened fire. After she had thrown about 200 shells, the Chinese ceased firing. Then followed four days of unsatisfactory parley with Yeh, the Governor of Canton, after which Commander Foote renewed the attack. The "Levant" now joined the "Portsmouth," and the vessels began a cannonade, which was returned with spirit for an hour. Then 208 men, in ten boats, were landed, and stormed the nearest fort, which was taken. Five thousand pigtail-wearing soldiers afterward attempted to recapture it, but were repulsed. In like manner, on the following morning, the next fort was taken, with an American loss of but three men. During the afternoon the defenders of the third fort fled. The next morning, in the face of a heavy fire, the fourth and last fort was carried by a rapid assault. The little company of Americans was now in possession of four modern forts constructed by European engineers, which had been defended, moreover, by thousands of men. The insult had been avenged, and the affair resulted in a treaty of friendship and commerce with China.

There was little love between Americans and Chinese, however, and three years afterward Captain Josiah Tatnall rendered valuable aid to the English and French gunboats when fired upon by the Chinese forts. The boats, under the command of Sir James Hope, were attempting to remove obstructions in the Peiho River when the forts suddenly opened a destructive fire. A desperate conflict followed, in which several hundred of the English were killed. Captain Tatnall commanded the chartered steamer "Toey-Wan," which was in the harbor. He forgot his neutrality as he watched the scene. With the exclamation, "Blood is thicker than water!" he jumped

into his launch and steamed for the British flagship. The boat was struck with a ball, and before its trip was ended sunk, the coxswain being killed and Lieutenant Trenchart severely wounded. The others who had manned her were rescued, and they helped the English at the guns. Captain Tannall afterward used the "Toey-Wan" to tow up and bring into action the British reserves. His action was a clear violation of the treaty and the neutrality law. He received but slight punishment, however, and gained great popularity in Great Britain.

At Eaya, in the Feejee Islands, in 1858, a sharp conflict took place between the natives and forty men under Lieutenant Caldwell, who had been sent to destroy the principal village as retribution for the murder of two American citizens. The natives were sent fleeing inland. The Secretary of the Navy said of the affair, "The gallantry, coolness, and bravery displayed by officers and men was in the highest degree commendable." A somewhat similar episode occurred in the vicinity of Kisémbó, on the west coast of Africa, in 1860. The natives threatened the property and lives of American citizens, and would undoubtedly have put their threats into effect had it not been for the presence and prompt action of Commander Brent of the sloop-of-war "Marion." When an insurrection occurred in the neighborhood of Panama, in July, 1860, Commander Porter landed a body of marines and sailors from his ship, the "St. Mary's," which was then stationed on the western coast of Mexico. The governor gave up the city of Panama to the joint occupancy of the forces of the "St. Mary's" and the British ship-of-war "Clio," and tranquillity was quickly restored.

PART III
BLUE JACKETS OF '61

BLUE-JACKETS OF '61.

CHAPTER I.

THE OPENING OF THE CONFLICT.—THE NAVIES OF THE CONTESTANTS.—DIX'S FAMOUS DESPATCH.—THE RIVER GUNBOATS.

THE story of the naval operations of the civil war is a record of wonderful energy and inventive skill in improvising and building war-vessels, vigilance and courage in handling them, and desperate bravery and dash displayed by officers and seamen in the great engagements in which vessels of either side took part. Yet of the immense body of literature dealing with the war, the greater part is given to telling the story of the great armies of the North and South. The details of the great land battles are familiar to many who have but a vague idea of the service done by the "blue jackets" of the North, and the daring deeds performed by the navies of both sides.

When the first mutterings of the storm of war began to be heard, the United States Government had at its disposal sixty-nine vessels-of-war, of which twenty-seven were laid up for repairs, or, sailors would say, "out of commission." Of the forty-two vessels in commission, twenty-six were

absent on missions to the East Indies, the African coast, and other distant quarters of the globe. Long months must elapse before the most hasty orders could reach them. Many were sailing-vessels, and must consume many months of precious time before they could reach the shores of the

THE "HARTFORD," FARRAGUT'S FLAGSHIP.

United States. Indeed, though on the inauguration of President Lincoln on March 4, 1861, all these vessels were immediately recalled, not one arrived before the middle of June, and many were delayed until late in the following winter. Of the vessels at home, many were old-fashioned sailing-frigates; beautiful with their towering masts and clouds of snowy canvas, but almost useless in that day when steam had become known as the only means of propelling vessels-of-war.

In officers and men the navy was almost as deficient as in vessels. A

long peace had filled the lists of officers with old men past that age in which may be expected the alertness and energy that must be possessed by Jack afloat. The lower grades were filled by boyish officers from the Naval Academy, who had never seen a gun fired in anger. The service was becoming rusty from long idleness.

Such was the condition of the navy of the United States when Abraham Lincoln was made President. Four years later the navy of the United States consisted of six hundred and seventy-one vessels. No nation of the world had such a naval power. The stern lessons of the great war had taught shipbuilders that wooden ships were a thing of the past. The little 'Monitor' had by one afternoon's battle proved to all the sovereigns of Europe that their massive ships were useless. And all this had been done by a people grappling in deadly strife with an enemy in their very dwellings. The world's history contains no more wonderful story of energy and invention.

When President Lincoln began his term of office, he appointed Gideon Welles of Connecticut Secretary of the Navy. South Carolina had seceded from the Union. Mississippi, Georgia, Florida, Alabama, and Louisiana had followed South Carolina. Anderson, with a handful of United States troops, was holding Fort Sumter, expecting every minute to see the puff of smoke from the distant casement of Fort Moultrie, and hear the shriek of the shell that should announce the opening of the attack. At Washington, politicians were intriguing. The loyalty of no man could be regarded as certain. Officers of the army and navy were daily resigning, and hastening to put themselves under the command of their various States. In the South all was activity. In the North the popular desire for a compromise hampered the authorities so that no decided stand against the spread of the rebellion could be made. The new Secretary of the Navy found himself face to face with the certainty of a long and bloody war, yet had under his command a navy hardly adequate for times of peace. To add to his perplexity, many of the oldest and most skillful officers in the navy resigned, saying that their duty to their States was greater than to the United States as a whole. A few revenue officers even went so far as to deliver to the State authorities the vessels of which they were in command. One commander, a Georgian, bringing his ship back from foreign waters, hesitated long whether to take it to the navy-yard at

DEPARTURE OF A NAVAL EXPEDITION FROM PORT ROYAL.
566

New York, or to deliver it to the Southern leaders. He finally decided to obey orders, and the ship remained with the United States. Some days afterward the commander told his lieutenant of his hesitation. "We all saw it," said the younger officer; "and had you turned the ship's prow towards Charleston, you would have been instantly put in irons."

The surrender of another naval vessel called forth that famous despatch from John A. Dix that will ever be linked with his name. The United States revenue cutter "McClelland" was lying at New Orleans, under the command of Capt. Breshwood. The revenue service is distinct from the regular navy, and is under the general command of the Secretary of the Treasury. John A. Dix, then Secretary of the Treasury, suspected that Capt. Breshwood was about to surrender his vessel to the Confederates, and sent an agent to order him to take the vessel to New York. Breshwood refused, and instantly Dix sent the despatch: "Tell Lieut. Caldwell to arrest Capt. Breshwood, assume command of the cutter, and obey the order through you. If Capt. Breshwood, after arrest, undertakes to interfere with the command of the cutter, tell Lieut. Caldwell to consider him as a mutineer, and treat him accordingly. *If any man attempts to haul down the American flag, shoot him on the spot.*" This despatch was intercepted by the Confederates, and the cutter was surrendered. But Dix's determined words reverberated through the North, and thrilled all hearts with the hope that the time for delay was past, and that the growing rebellion would be put down with a firm hand.

So at the opening of the war we find the North with a navy consisting of but a few old-fashioned ships, few sailors, officers everywhere resigning, and a general feeling of distrust of brother officers in all grades.

The condition of the South as regards the navy was even worse. The Southern States had never done any great amount of ship-building. The people were almost all engaged in farming. The crops of cotton and sugar that they raised were shipped in vessels built in Maine, and manned by sailors from the sea-faring villages of New England. At the time the war broke out, there was hardly a ship-yard in the confines of the Confederacy. A few vessels were gained by the treachery of United States officers. The capture of the Norfolk navy-yard brought them large quantities of naval stores, and by wonderful activity a few vessels were built for service on inland sounds and rivers. But at no time could the Confederacy have

been said to have a navy; and, keeping this fact in view, the record the Confederates made with two or three vessels is most wonderful. In war-vessels for service on that wonderful net-work of rivers that make up the water-ways of the Mississippi Valley, the South was not so deficient as in ships of the sea-going class. The long, crescent-shaped levee at New Orleans is lined throughout certain seasons of the year by towering river-steamers which ply up and down the Mississippi and connecting streams, taking from the plantations huge loads of cotton, sugar, and rice, and carrying to the planters those supplies which can only be furnished by the markets of a great city. The appearance of one of these towering river transports as she comes sailing down the turbid stream of the great Father of Waters, laden to the water's edge with brown bales of cotton, and emitting from her lofty, red crowned smoke-stacks dense clouds of pitchy black smoke, is most wonderful. Unlike ocean-steamers, the river-steamer carries her load upon her deck. Built to penetrate far towards the head-waters of rivers and bayous that in summer become mere shallow ditches, these steamers have a very light draught. Many of them, whose tiers of white cabins tower sixty or seventy feet into the air, have but three feet of hull beneath the river's surface. The first deck, when the vessel is but lightly loaded, stands perhaps two feet out of water. Above this, carried on rows of posts twenty feet high, comes the first cabin. All between is open to the air on either side; so that, as one of the huge river-monsters passes at night, the watcher on the bank can see the stalwart, black, half-naked bodies of the negro stokers, bending before the glowing furnace doors, and throwing in the soft coal, that issues in clouds of smoke from the towering chimneys seventy feet above. The lights in three rows of cabin windows glow; and the unceasing beat of the paddle-wheels mingles with the monotonous puff of the steam from the escape-pipes, and the occasional bursts of music from the open cabin doors. One who for the first time looks on one of these leviathans of the Mississippi, pursuing its stately course at night, does not wonder at the frightened negro, who, seeing for the first time a night-steamboat, rushed madly from the river's bank, crying that the angel Gabriel had come to blow the last trump.

When these boats have taken on their full load of cotton, they present a very different appearance. Then all the open space beneath the cabins

is filled by a mass of cotton-bales. The hull is so sunken in the water that the lowest tier of cotton-bales is lapped by the little waves that ruffle the surface of the river. The stokers and furnaces are hid from view, and the cabins appear to be floating on one huge cotton bale. Generally a great wooden stern-wheel propels this strange craft, adding to the grotesqueness of the sight.

It may readily be understood, that vessels of this class, in which strength was subordinated to lightness, and economy to gingerbread decoration, seemed to be but poor materials for vessels-of-war. The tremendous recoil of a rifled cannon fired from one of those airy decks, meant to stand no ruder shock than the vibration caused by dancing pleasure-parties, would shake the whole frail structure to pieces. Yet the ingenuity born of necessity, and the energy awakened by the immediate prospect of war, led the Confederate engineers to convert some of these pleasure-palaces into the most terrible engines of destruction chronicled in the annals of war. The first step was to sweep off all the towering superstructure of decks, cabins, and saloons; tear away all the fanciful mouldings, the decorated staterooms, and carved and gilded stairways. This left a long, shallow hull, with a powerful engine in the centre, and great paddle-wheels towering on either side; the whole so light that the soldiers of Grant's army, when they first saw one, stoutly averred that "those boats could run on a heavy dew." The hull was then thinly plated with iron, and the prow lengthened, and made massive, until it formed the terrible "ram," fallen into disuse since the days of the Greek galleys, to be taken up again by naval architects in the nineteenth century. Then on the deck was built a pent-house of oak and iron, with sloping sides just high enough to cover the engine. The two towering smoke-stacks, the pride of the old river-steamers, were cut down to squat pipes protruding a foot or two above the strange structure. In the sides were embrasures, from which, when open, peered the iron muzzles of the dogs of war, ready to show their teeth and spit fire and iron at the enemy. This was the most powerful type of the river gunboat, and with them the Confederacy was fairly well provided; though it was not long before the war department of the United States was well supplied with similar ships. It was these iron-clad gunboats that used to rouse the anger of the doughty Admiral Farragut, who persisted in declaring them cowardly engines of destruction, and predicted that as they

came into use, the race of brave fighting jack-tars would disappear. On one occasion the admiral was ploughing his way up the Mississippi above New Orleans, in one of Commodore Bailey's river iron-clads. The batteries of the enemy on either hand were pounding away at the ascending ships, hurling huge bolts of iron against their mailed sides, with a thunder that was deafening, and a shock that made the stricken ships reel. The admiral stood in the gun-room of one of the iron-clads, watching the men working the guns, in an atmosphere reeking with the smoke of the powder. A look of manifest disapproval was on his face. Suddenly an unusually well-directed shot struck a weak point in the armor, and, bursting through, killed two men near the admiral's position. He looked for a moment on the ghastly spectacle, then turning to an officer said, "You may stay here in your iron-clad room if you wish: as for me, I feel safer on deck." And on deck he went, and stayed there while the fleet passed through the hail of shot and shell.

The scarcity of iron in the Southern States prevented the naval authorities of the newly organized Confederacy from equipping a very large fleet of iron-clads. At the outbreak of the war, the Tredegar Iron Works at Richmond was the only place in the South where iron plates of a size suitable for plating vessels could be rolled. The demand was of course far in excess of the facilities of the factory, and many were the make-shifts that ship-builders were forced to. Some vessels were plated only about the centre, so as to protect the boiler and engines. Others bore such a thin coat of iron that they were derisively called "tin-clads" by the sailors, who insisted that a Yankee can-opener was all that was necessary to rip the vessel up. Sometimes, when even a little iron was unattainable, bales of cotton were piled up around the sides, like breastworks, for the protection of men and engines. The vessel which captured the United States ship "Harriet Lane," at Galveston, was thus provided; and the defence proved very valuable. One great objection to the cotton-bale bulwarks was the very inflammable nature of the material, since a red-hot shot from the enemy, or a bit of blazing wadding from a gun, would set it smouldering with a dense black smoke that drove the men from their guns until the bales could be thrown overboard; thus extinguishing the fire, but exposing the men to the fire of the enemy.

One of the most striking features of the war of secession was the

manner in which private citizens hastened to contribute towards the public defence. This was so no less in naval than in military circles. Perhaps the greatest gift ever made by a citizen to his Government was the gift by "Commodore" Vanderbilt to the United States of a magnificently equipped ship-of-war, which was named "The Vanderbilt" in honor of her donor, and did efficient service in maintaining the blockade on the Atlantic coast. Mr. James Gordon Bennett, the present owner of the "New-York Herald," put his yacht at the service of the Government, and was himself commissioned a lieutenant in the revenue service.

CHAPTER II.

FORT SUMTER BOMBARDED.—ATTEMPT OF THE "STAR OF THE WEST" TO RE-ENFORCE ANDERSON.—THE NAVAL EXPEDITION TO FORT SUMTER.—THE RESCUE OF THE FRIGATE "CONSTITUTION."—BURNING THE NORFOLK NAVY-YARD.

THE first purely warlike event of the civil war was the bombardment and capture of Fort Sumter in Charleston Harbor, by the troops of the State of South Carolina. At the time when it first became evident that civil war was inevitable, Fort Sumter was vacant. The only United States troops stationed at Charleston were two companies of artillery under Major Robert Anderson. The fortifications of Charleston Harbor consisted of Fort Moultrie on the main land (in which Anderson's command was stationed), Fort Pinckney, and Fort Sumter standing massive and alone in the centre of the harbor. Anderson, with his handful of troops in the most vulnerable of the three forts, saw day by day the secession sentiment growing stronger. Almost daily some of the privileges of the soldiery were cut off; such as the right of passing through the city, and the right to buy supplies in the public markets. Daily could be heard the drum and the tread of the newly organized bodies of State soldiers. Anderson saw that his position was a weak one, but could get no orders from headquarters. Finally he decided to assume the responsibility of evacuating Fort Moultrie and occupying Fort Sumter. To-day it hardly seems as though he could have thought of doing otherwise, but

at that time it was a grave responsibility for a man to assume. The whole voice of the North was for compromise, and it was his part to commit the first overt act of war. But he was nobly upheld in his decision by his Northern brethren. Having decided, he lost no time in carrying his plan

FORT MOULTRIE.

into effect. His little corps of troops was drawn up at midnight on the parade, and for the first time informed of the contemplated movement. The guns of Fort Moultrie were hurriedly knocked from their trunnions, and spiked; the gun-carriages were piled in great heaps, and fired; and every thing that might in any way be used against the United States Government was destroyed. Then the work of evacuation was begun. A small fleet of row-boats carried the troops to the entrance of the great, sullen fort, standing alone in the middle of the harbor, and made frequent trips bringing supplies and ammunition from the deserted fortress. All

ANDERSON'S COMMAND OCCUPYING FORT SUMTER.

was done silently: the oars were muffled, and the commands of the officers were whispered, that no tidings should be told of the movement under way. Before sunrise all was completed; and when the rays of the rising sun fell upon the stars and stripes floating from the flagstaff of Sumter, the people of Charleston turned their eyes from the starry flag to the clouds of smoke arising from Fortress Moultrie, and comprehended that the war had begun. Newspaper correspondents and agents of the Federal Government, and the Southern leaders, rushed for the telegraph-wires; and the news soon sped over the country, that Sumter was occupied. The South Carolinians at once began to build earthworks on all points bearing on the fort, and were evidently preparing to drive Anderson and his troops out. Anderson promptly telegraphed to Washington for supplies and re-enforcements, and expressed his intention of staying as long as the walls stood. The Government was dilatory, but finally concluded to re-enforce the fort, and to that end secured the steamer "Star of the West," and began the work of provisioning her for the voyage. It was decided that she should carry no guns: that would look too much like war; and accordingly, on the 8th of January, this helpless vessel set out to the aid of the beleaguered garrison of Fort Sumter. The news was at once telegraphed to Charleston; and the gunners in the Confederate trenches shotted their guns, and awaited the appearance of the steamer. She hove into sight on the morning of the 12th, and when within range was notified, by a shot across her bows, that she was expected to stop. This signal being disregarded, the firing began in earnest; and the shot and shell fell thick about the ship, which kept pluckily on her course. But it was useless to persist. One shot struck the steamer near the bows, others whizzed through her rigging, and finally her captain saw a tug putting out from the land, towing a schooner crowded with armed men to cut off the "Star's" retreat. He gave the command "Hard a port." The ship's head swung round, and she steamed away, leaving the garrison to their fate. An old gunner who stood in a casemate of Fort Sumter, with the lanyard of a shotted gun in his hand, tells the story of how he begged Major Anderson to let him fire on the rebel batteries. "Not yet; be patient," was the response. When the shells began to fall thick about the steamer, he again asked permission to retaliate, but met the same response. Then when he saw the white splinters fly from the bow, where the enemies' shell had struck, he cried, "Now, surely, we can return

that!" but still the answer was, "Be patient." When the "Star of the West," confessing defeat, turned and fled from the harbor, Anderson turned and walked away, curtly saying there was no need to fire then, but to save

the load for the necessity that was coming.

MAJOR ROBERT ANDERSON.

The first naval operation of the war was the expedition fitted out to relieve Fort Sumter. In itself, this expedition was but an insignificant affair, ending in failure; but as the first warlike action on the part of the United States Government, it attracted the greatest attention throughout the nation. In preparing the vessels for sea, great care was taken to

keep their destination secret, so that no warning should reach the Confederates, who were lying in their batteries about Sumter, awaiting the first offensive action of the United States authorities to begin shelling the fortress. While the squadron was fitting out, it was generally supposed that it was intended to carry troops and munitions of war to Fort Pickens in Pensacola Harbor, which was invested by the Confederates. When the fleet finally sailed, each commander carried sealed orders, upon opening which he first found that the expedition was bound for Charleston Harbor. Notwithstanding all this secrecy, the destination of the fleet was telegraphed to the Confederates almost as soon as the last vessel dropped past Sandy Hook;

THE "MORRIS"—TORPEDO-BOAT OF THE SMALLEST TYPE—464 TONS DISPLACEMENT,
800 HORSE-POWER

and the fire from the circle of batteries about the doomed fort in Charleston Harbor began immediately. When the fleet arrived at its destination, the bombardment was well under way. To attempt to land troops or stores under the withering fire concentrated upon the fort, would have been madness. The only vessel of sufficient strength to engage the batteries, the "Pawnee," had been separated from the fleet by a gale a few nights before, and had not yet arrived. Sadly the sailors gave up the attempt, and, beating up and down outside the harbor bar, awaited the inevitable end of the unequal conflict. When, finally, after a heroic resistance of several days, Major Anderson and his little band, worn with constant vigilance and labor, destitute of provisions, and exposed to a constant hail of iron missiles from without and a raging fire within, agreed to capitulate, the United States steamship "Baltic," of the Fort Sumter expedition, took him on board and bore him safely to New York. The main purpose of the expedition had failed, it is true; but the Government had made its first decisive move, and public sympathy and confidence were excited.

The preparations for the coming struggle were now being pressed forward on every hand. An incident which occurred soon after the fall of Sumter awakened the greatest enthusiasm throughout the North. The United States frigate "Constitution" was lying at Annapolis, where she was being used by the authorities of the naval academy there for a school-ship. Although the State of Maryland had not seceded from the Union, yet secessionists were to be found in great numbers in all parts of the State. A number of them determined to seize the ship. Besides being a war-vessel of considerable strength, the "Constitution"—or "Old Ironsides," as she was affectionately called—was famous for her many exploits, and dear to the hearts of Americans for her long service under the stars and stripes. "If we can but capture the vessel, and turn her guns against the Union," thought the conspirators, "we will strike a heavy blow at the Northern sympathizers." And, indeed, it would have been a heavy blow to the nation had they captured the old frigate that did such service under Preble in the war with Tripoli; and that in the War of 1812 forced the British to strike their colors, and gave to the United States navy an equal place on the high seas with any nation of the world. The plans of the conspirators were well laid. The ship was manned by but twenty men, and lay above a bar, over which she could only be carried by the aid of a steam-tug

Fortunately the officers and crew were all loyal. For four days and four nights they watched the preparations being made on shore for their capture. Mysterious signals flashed from the surrounding hills. Armed bodies of men were seen drilling on the shore. All seemed to tend toward certain capture. Yet with no chance of escape the brave men kept vigilant guard, with guns shotted and always primed.

Near Annapolis was stationed the Eighth Massachusetts Infantry, with Gen. Butler in command. News was carried to the general of the perilous position of the "Constitution," and he at once determined to hasten to her relief. Just as the crew of the old frigate had abandoned all hope, the steamer "Maryland" entered the harbor, her guards and decks crowded with the men of the Eighth Massachusetts. Quickly the "Constitution" was prepared for sailing. Her anchors were slipped, all useless weight cast overboard, and, with the "Maryland" as tug, the stately frigate passed slowly over the bar, and out of the grasp of the conspirators.

The "Constitution" was not the only United States vessel that the Confederates were planning to seize. Soon after she escaped from their hands, an event occurred by which a vast quantity of naval stores, and the mutilated but still valuable hulls of some of the most powerful war-vessels in the United States navy, fell into their hands. The United States navy-yard at Norfolk was one of the most valuable of all the governmental possessions. In the great yard was government property amounting to more than twenty millions of dollars. Machine-shops, foundries, dwellings for officers, and a massive granite dry-dock made it one of the most complete navy-yards in the world. An enormous quantity of cannon, cannon-balls, powder, and small-arms packed the huge storehouses. In the magnificent harbor were lying some of the most formidable vessels of the United States navy, including the steam frigate "Merrimac," of which we shall hear much hereafter. Small wonder was it, that the people of Virginia, about to secede from the Union, looked with covetous eyes upon this vast stock of munitions of war lying apparently within their grasp. It did not take long for them to persuade themselves that they were right in seizing it; and, once decided, their movements were vigorous and open. Of their ability to capture the yard, and gain possession of all the property there, they felt no doubt. The first thing to be done was to entrap the ships so that they should be unable to get out of the harbor. Accordingly,

on the 16th of April, three large stone-vessels were sunk directly in the channel, apparently barring the exit of the frigates most effectually. Indeed, so confident of success were the plotters, that in a despatch to Richmond, announcing the successful sinking of the stone-ships, they said: "Thus have we secured for Virginia three of the best ships of the navy." But later events showed, that, in boasting so proudly, the Virginians were committing the old error of counting chickens before they were hatched.

The condition of affairs within the navy-yard now seemed desperate. There appeared to be no chance of getting the vessels beyond the obstructions. The militia of Virginia was rapidly gathering in the town. Among the naval officers on the ships great dissension existed, as many were Southerners, about to resign their posts in the United States service to enter the service of their States. These men would, of course, give no active aid to any movement for the salvation of the United States property in the yard. Any assistance must come from the outside; the beleaguered could but passively await the course of events.

At seven o'clock on the night of April 21, the United States steamer "Pawnee," which had been lying under the guns of Fortress Monroe, hoisted anchor, and headed up the bay, on an errand of destruction. It was too late to save the navy-yard with its precious stores. The only thing to be done was to burn, break, and destroy every thing that might be of service to an enemy. The decks of the "Pawnee" were black with men,—soldiers to guard the gates, and complete the work of destruction within the yard; blue-jacketed tars to do what might be done to drag the entrapped vessels from the snare set them by the Virginians. It was a bright moonlight night. The massive hull of the ship-of-war, black in the cold, white rays of the moon, passed rapidly up the Elizabeth River. The sunken wrecks were reached, and successfully avoided; and about nine o'clock the "Pawnee" steamed into the anchorage of the navy-yard, to be greeted with cheers from the tars of the "Cumberland" and "Pennsylvania," who expected her arrival. The townspeople seeing the war-vessel, with ports thrown open, and black muzzles of the guns protruding, took to their houses, fearing she would open fire on the town. Quickly the "Pawnee" steamed to her moorings. The marines were hurriedly disembarked, and hastened to guard the entrances to the navy-yard. Howitzers were planted so as to rake every street leading to the yard. Thus secure against attack, the world

of the night began. Nearly two thousand willing hands were set hard at work, cannon were dismounted and spiked, rifles and muskets dashed to pieces; great quantities of combustibles were piled up in the mammoth buildings, ready to be fired at a given signal. In the mean time, the blue-jackets were not idle. It was quickly decided, that, of all the magnificent vessels anchored in the harbor, the "Cumberland" was the only one that could be towed past the obstructions in the river. All hands were set to work removing every thing of value from the doomed vessels to the "Cumberland." Gunpowder and combustibles were then arranged so as to completely destroy the vessels when ignited. When the moon went down at twelve o'clock, the preparations were complete. All the men were then taken on board the "Cumberland" and "Pawnee," save a few who were left to fire the trains. As the two vessels started from the moorings, the barracks were fired, the lurid light casting a fearful gleam upon the crowded yards and shrouds of the towering frigate. A little way out in the stream a rocket was sent up from the "Pawnee." This was the signal for the firing of the trains. The scene that followed is thus described by an eye-witness:—

"The rocket sped high in air, paused a second, and burst in showers of many colored lights; and, as it did so, the well-set trains at the ship-houses, and on the decks of the fated vessels left behind, went off as if lit simultaneously by the rocket. One of the ship-houses contained the old 'New York,' a ship thirty years on the stocks, and yet unfinished; the other was vacant. But both houses, and the old 'New York,' burned like tinder. The vessels fired were the 'Pennsylvania,' the 'Merrimac,' the 'Germantown,' the 'Plymouth,' the 'Raritan,' the 'Columbia,' and the 'Dolphin.' The old 'Delaware' and 'Columbus,' worn-out and disabled seventy-fours, were scuttled, and sunk at the upper docks on Friday.

"I need not try to picture the scene of the grand conflagration that now burst like the day of judgment on the startled citizens of Norfolk, Portsmouth, and all the surrounding country. Any one who has seen a ship burn, and knows how like a fiery serpent the flame leaps from pitchy deck to smoking shrouds, and writhes to their very top around the masts that stand like martyrs doomed, can form some idea of the wonderful display that followed. It was not thirty minutes from the time the trains were fired, till the conflagration roared like a hurricane, and the flames from land

and water swayed and met and mingled together, and darted high, and fell and leaped up again, and by their very motion showed their sympathy with the crackling, crashing war of destruction beneath.

"But in all this magnificent scene the old ship 'Pennsylvania' was the centre piece. She was a very giant in death, as she had been in life. She was a sea of flame; and when the iron had entered her soul, and her bowels were consuming, then did she spout forth from every porthole of every deck torrents and cataracts of fire, that to the mind of Milton would have represented her a frigate of hell pouring out unending broadsides of infernal fire. Several of her guns were left loaded, but not shotted; and as the fire reached them they sent out on the startled morning air minute-guns of fearful peal, that added greatly to the alarm that the light of the fire had spread through the country round about. The 'Pennsylvania' burned like a volcano for five hours and a half before her mainmast fell. I stood watching the proud but perishing old leviathan as this emblem of her majesty was about to come down. At precisely half-past nine o'clock the tall tree that stood in her centre tottered and fell, and crushed deep into her burning sides."

During this fearful scene the people of the little town, and the Virginia militia-men who had been summoned to take possession of the navy-yard, were no idle spectators. Hardly had the "Pawnee" steamed out into the stream, when the great gates were battered down, and crowds of men rushed in, eager to save whatever arms were uninjured. Throughout the fire they worked like beavers, and succeeded in saving a large quantity of munitions of war to be used by the Confederacy. The ships that had been fired all burned to the water's edge. One was raised, and re-appeared as the formidable "Merrimac" that at one time threatened the destruction of the whole Union navy.

A great amount of valuable property was saved for the Virginians by the coolness of a young boy, the son of one of the citizens of the town. This lad was within the gates of the navy-yard when the troops from the ships rushed in, and closed and barricaded them against the townspeople. He was frightened, and hid himself behind a quantity of boards and rubbish, and lay there a silent and immensely frightened spectator of the work of destruction. An officer passed near him directing the movements of two sailors, who were laying a train of gunpowder to an immense pile of

explosives and combustibles in the huge granite dry-dock. The train passed over a broad board; and the boy, hardly knowing what he did, drew away this board, leaving a gap of eight inches in the train. When all the trains were fired, this was of course stopped at the gap; and the dry-dock was saved, and still remains in the Norfolk Navy-Yard.

CHAPTER III.

DIFFICULTIES OF THE CONFEDERATES IN GETTING A NAVY.—EXPLOIT OF THE "FRENCH LADY."—NAVAL SKIRMISHING ON THE POTOMAC.—THE CRUISE OF THE "SUMTER."

THE disparity of maritime importance between the North and the South, and the consequent difficulties to be overcome by the latter in getting a navy, have been already alluded to. As it has been stated, in river-steamers and ponderous rams the South was fairly well supplied; but what was really needed were ocean-going ships, to break the rigid blockade that was slowly starving the Confederacy into submission,—swift cruisers to prey on the commerce of the enemy, and powerful line-of-battle ships, which, by successfully coping with the vessels of the United States on the high seas, should secure for the Confederacy recognition, and possibly assistance, from the great powers of Europe. But how to get these without ship-yards, ship-builders, or seamen, was a task that baffled the ingenuity of the best minds in the South. Immediately upon the organization of the Confederate cabinet, an agent was sent to England to negotiate for vessels and guns. But, though this agent was a man of wonderful resources and great diplomacy, he found an almost insuperable obstacle in the universally recognized law of nations, to the effect that no neutral nation shall sell vessels or munitions of war to belligerents. It is true that this agent, Capt. Bulloch, did succeed in secur-

ing three ships,—the “Florida,” the “Shenandoah,” and the celebrated “Alabama;” but to do so cost an immense amount of diplomacy and the sacrificing of the strength of the vessels to the necessity which existed for making them appear to be merchantmen. To build an iron-clad in a foreign port, was out of the question; and consequently ships so obtained were forced to fly from any well-equipped war-vessel, and only venture to attack unarmed merchantmen.

The United States vessels which were delivered into the hands of the Confederates by their officers were mainly small revenue cutters, of little use in naval warfare and soon given up or destroyed. Not a single ship of this class made any record of distinguished service for the Confederacy. Several merchant-vessels were captured by the Confederates, who concocted the most ingenious plans to secure success. One bright July morning the steamer “St. Nicholas” was lying at her dock in Baltimore, with steam up, and all prepared for her regular trip down the Chesapeake. Quite a large number of passengers had bought tickets, and lounged about the decks, waiting for the voyage to begin. Among the passengers were a number of mechanics, with tools in their hands, going down the bay in search of work. Shortly before the signal to cast off was given, a carriage was driven down the wharf, and a lady, heavily veiled, alighted, assisted by two gentlemen. The gentlemen stated that she was a French lady, and in ill-health. Accordingly she was at once assigned a stateroom, to which she retired. Soon after, the vessel cast off and headed down the bay. When fairly out of the harbor, the stateroom door opened, and instead of the frail, heavily veiled widow who went in, out strode a black-whiskered man, armed to the teeth. He had no trouble now in speaking English, and at once demanded the surrender of the ship. The honest mechanics dropped their tools, and, drawing concealed weapons, rallied around their leader. They had found the work they started out to seek. The ship was captured, and a new privateer was ready to prey on Northern merchant-ships. Once in the hands of the conspirators, the vessel was run into a little port where the passengers were landed, and a hundred and fifty more Confederates taken aboard. Under the command of Capt. Thomas (the “French lady”), the vessel proceeded to Fredericksburg, where she, and three brigs captured on the way, were delivered to the Confederate leaders. This adventure so favorably terminated, Thomas,

with his officers, started back to Baltimore, to lay plans for the capture of some other unsuspecting craft. But fortune, which had thus far favored him, deserted him at last. On the vessel upon which the conspirators took passage were two police-officers of Baltimore. One of these officers recognized Thomas, and quietly laid plans for his capture. In the harbor at Baltimore stands Fort McHenry. Under its frowning casemates the ships of the United States could lie without fear of attack from the thousands of discontented men who made of Baltimore a secession city. The captain of the "Mary Washington" was ordered by Lieut. Carmichael, the officer of police, to bring the ship into the anchorage, under the guns of the fort. This soon came to the ears of Thomas, who with his men rallied on the deck, and, with revolvers drawn, seemed prepared to make a desperate resistance. They were soon convinced that the officers had ample power behind them, and therefore submitted. On arriving at the fort, a company of soldiers was sent aboard the boat, and the prisoners were marched ashore. But Thomas was not to be found. Search was made in all parts of the boat, without avail; and the officers had decided that he had jumped overboard, with the desperate intention of swimming ashore. Just as they were about to give up the search, a noise was heard that seemed to come from a bureau in the ladies' cabin. Search was made, and there, coiled up in a narrow bureau-drawer, lay the leader of the band. He had been there two hours, and was helpless from cramp and exhaustion. He was placed in a cell at Fort Lafayette; but later, having been given the privilege of walking about the fort, managed to escape by making floats of empty tomato-cans, and with their aid swimming almost two miles. He was afterwards recaptured, and remained a prisoner until released by reason of an exchange of prisoners between the North and South. Soon after his capture, the Federal authorities at Baltimore learned that plans had been made to capture other passenger steamers in the same way; but the ringleader being locked up, there was no difficulty in defeating the plans of the band.

During the first few weeks of the war, before active hostilities had fairly commenced, events of this nature were of almost daily occurrence. On the Potomac particularly, small cruisers were in continual danger of being captured, and put into commission under the Confederate flag. A trading schooner loaded with garden-produce, dropping lazily down the river to the bay, would suddenly be boarded by four or five armed men, her crew

driven below, and the vessel run into some convenient port on the Virginia shore, to re-appear in a day or two with a small rifled cannon mounted on the fore-castle, and a crew thirsting to capture more vessels for the Confederacy. On one occasion a party of congressmen from Washington started down the Potomac for an excursion to Hampton Roads. Their vessel was a small tug, which carried a bow-gun carefully screened from observation by tarpaulin. A short distance down the river, a boat with a howitzer was seen putting out into the stream, and shaping its course directly across the bows of the tug. As the two boats drew nearer together,

BLOCKADING THE MOUTH OF THE MISSISSIPPI.

a demand came from the smaller that the tug should be surrendered "to the State of Virginia." Apparently yielding, the captain of the tug slowed up his vessel, and waited for his assailants to come alongside, which they did until suddenly confronted with the muzzle of a cannon, trained directly on their boat, and a loud voice demanding that they surrender at once, which they accordingly did, and were taken to Washington by their triumphant captors. Many such trivial events are chronicled by the newspapers of the time. The advantage gained by either side was small, and the only effect was to keep the war sentiment at fever-heat.

The first regularly commissioned man-of-war of the Confederate States was the "Sumter," an old passenger steamer remodelled so as to carry five guns. This vessel, though only registering five hundred tons, and smaller

than many a steam-yacht of to-day, roamed over the high seas at will for more than a year, burning and destroying the merchant-vessels of the North, and avoiding easily any conflicts with the Northern men-of-war. Her exploits made the owners of American merchant-vessels tremble for their property; and the United States authorities made the most desperate attempts to capture her, but in vain. In his journal of Dec. 3, 1861, Capt. Semmes of the "Sumter" writes with the greatest satisfaction: "The enemy has done us the honor to send in pursuit of us the 'Powhattan,' the 'Niagara,' the 'Iroquois,' the 'Keystone State,' and the 'San Jacinto.'" Any one of these vessels could have blown the 'Sumter' out of water with one broadside, but the cunning and skill of her commander enabled her to escape them all.

It was on the 1st of June, 1861, that the "Sumter" cast loose from the levee at New Orleans, and started down the Mississippi on her way to the open sea. For two months workmen had been busy fitting her for the new part she was to play. The long rows of cabins on the upper deck were torn down; and a heavy eight-inch shell-gun, mounted on a pivot between the fore and mainmasts, and the grinning muzzles of four twenty-four pounder howitzers peeping from the ports, told of her warlike character. The great levee of the Crescent City was crowded with people that day. Now and again the roll of the drum, or the stirring notes of "Dixie," would be heard, as some volunteer company marched down to the river to witness the departure of the entire Confederate navy. Slowly the vessel dropped down the river, and, rounding the English turn, boomed out with her great gun a parting salute to the city she was never more to see. Ten miles from the mouth of the river she stopped; for anchored off the bar below lay the powerful United States steamer "Brooklyn," with three other men-of-war, each more than a match for the infant navy of the Confederacy. Eleven days the "Sumter" lay tugging at her anchors in the muddy current of the great river, but at last the time of action arrived. The news came that the "Brooklyn" had started in chase of a vessel, and the mouth of the river was clear. Quickly the "Sumter" got under way, and with all steam up made for the channel over the bar. She was still six miles from the bar when the "Brooklyn" caught sight of her, and abandoning her first chase strove desperately to head her off. It was a time of intense excitement. Each vessel was about equally distant from the bar for which

each was steaming at the highest possible speed. For the "Sumter," it was escape or die. It was too late to fly up the river to the sheltering guns of Fort St. Philip. Should the "Brooklyn" get within range, the "Sumter" was doomed. The "Brooklyn" was the faster vessel of the two, but had the wind in her teeth; while the "Sumter" had the advantage of wind and current. At length the pass was reached, and the "Sumter" dashed over the bar, and out on the smooth blue water of the Gulf of Mexico, well ahead of her powerful foe. The "Brooklyn" quickly rounded to, and a quick puff of smoke from amidships told the crew of the flying vessel that the terrible pivot-gun of their enemy had sent a warning message after them. But there was but a second of suspense, when a great jet of water springing from the surface of the gulf told that the bolt had fallen short. The "Brooklyn" then quickly crowded on all sail, and started in hot pursuit, but after four hours abandoned the chase, put up her helm, and started sullenly back for the river's mouth; while the tars of the "Sumter" crowded shrouds and bulwarks, and cheered heartily for the navy of the young Confederacy.

The "Sumter" was now fairly embarked on her career. The open sea was her territory, and all ships floating the stars and stripes at the mast-head were to be her prey. She was not a strong vessel; and her orders were to avoid any battles with the powerful ships of the "Yankee" navy, but to seize and destroy all merchantmen that should come in her way. Her first purpose was to capture these vessels, and by selling them in neutral ports profit by the prize. But the neutral nations soon refused to admit all rebel prizes to their ports; and, as all the ports of the Confederacy were closed by the blockade, nothing was left but to burn the vessels when captured. Many a floating bonfire marked the way of the little "Sumter," and great was the consternation among the ship-owners of the North.

When four days out, the "Sumter" captured her first prize. She was a fine ship, the "Golden Rocket" of Maine, six hundred and ninety tons. With the United States flag fluttering at the peak, she came sailing proudly towards her unsuspected enemy, from whose peak the red flag of England was displayed as a snare. When the two vessels came within a mile of each other, the wondering crew of the merchantman saw the English flag come tumbling down, while a ball of bunting rose quickly to the peak of

the mysterious stranger, and catching the breeze floated out, showing a strange flag, — the stars and bars of the Confederacy. At the same minute a puff of smoke from the "Long Tom" amidships was followed by a solid shot ricochetting along the water before the dismayed merchantman, and conveying a forcible, but not at all polite, invitation to stop. The situation dawned on the astonished skipper of the ship, — he was in the hands of "the Rebels;" and with a sigh he brought his vessel up into the wind, and awaited the outcome of the adventure. And bad enough the outcome was for him; for Capt. Semmes, unwilling to spare a crew to man the prize, determined to set her on fire. It was about sunset when the first boat put off from the "Sumter" to visit the captured ship. The two vessels were lying a hundred yards apart, rising and falling in unison on the slow rolling swells of the tropic seas. The day was bright and warm, and in the west the sun was slowly sinking to the meeting line of sky and ocean. All was quiet and peaceful, as only a summer afternoon in Southern seas can be. Yet in the midst of all that peace and quiet, a scene in the great drama of war was being enacted. Nature was peaceful, man violent.

For a time nothing was heard save the measured thump of the oars in the rowlocks, as the boats plied to and fro between the two ships, transporting the captured crew to the "Sumter." Finally the last trip was made, and the boat hoisted to the davits. Then all eyes were turned toward the "Golden Rocket." She lay almost motionless, a dark mass on the black ocean. The sun had long since sunk beneath the horizon; and the darkness of the night was only relieved by the brilliancy of the stars, which in those latitudes shine with wondrous brightness. Soon the watches on the "Sumter" caught a hasty breath. A faint gleam was seen about the companionway of the "Rocket." Another instant, and with a roar and crackle, a great mass of flame shot up from the hatch, as from the crater of a volcano. Instantly the well-tarred rigging caught, and the flame ran up the shrouds as a ladder of fire, and the whole ship was a towering mass of flame. The little band of men on the "Sumter" looked on the terrific scene with bated breath. Though they fully believed in the justice of their cause, they could not look on the destruction they had wrought without feelings of sadness. It was their first act of war. One of the officers of the "Sumter" writes: "Few, few on board can forget the spectacle, — a ship set fire to at sea. It would seem that man was almost warring with his

Maker. Her helpless condition, the red flames licking the rigging as they climbed aloft, the sparks and pieces of burning rope taken off by the wind, and flying miles to leeward, the ghastly glare thrown upon the dark sea as far as the eye could reach, and then the deathlike stillness of the scene, — all these combined to place the "Golden Rocket" on the tablet of our memories forever." But it was not long before the crew of the "Sumter" could fire a vessel, and sail away indifferently, with hardly a glance at their terrible handiwork.

The "Sumter" continued on her cruise, with varying fortunes. Sometimes weeks would pass with no prizes to relieve the tedium of the long voyage. Occasionally she would run into a neutral port for coal or water, but most of the time was spent on the open sea. The crew were kept actively employed with drills and exercises; while the officers, yawning over their books or games, longed for the welcome cry from the masthead, "Sail ho!" In September the "Sumter" captured a brig, the "Joseph Park;" and the boarding officer, on examining the log-book, found an entry made by her captain on the day of leaving Pernambuco: "We have a tight, fast vessel, and we don't care for Jeff Davis." The unlucky captain had holloaed long before he was out of the wood.

The "Joseph Park" was the last prize the tars of the "Sumter" had the pleasure of "looting" for many days. Up and down the tropic seas the cruiser travelled, loitering about the paths of ocean commerce to no avail. Often enough the long-drawn hail of the look-out in the cross-trees, "Sail ho-o-o-o!" would bring the jackies tumbling up from the forecastle, and set the officers peering anxiously through their telescopes. But the sails so sighted proved to be English, French, Spanish, any thing but American; and life aboard the "Sumter" became as dull as a fisher's where fish are not to be found. In September Capt. Semmes ran his vessel into a Martinique harbor, to make some needed repairs, and give the sailors a run ashore. Here they were blockaded for some time by the United States frigate "Iroquois," but finally escaped through the cunning of Semmes. Lying in the harbor near the "Sumter" were two Yankee schooners, whose captains arranged with the commander of the "Iroquois" to signal him if the "Sumter" should leave the harbor. If on passing the bar she headed south, a single red light should gleam at the masthead of the schooner; should her course lie northward, two lights would be displayed. Semmes, lying at

anchor in the bay, and chafing over his captivity, determined to break away. He had noticed the frequent communications between the schooners and the man-of-war, and suspected that his course would be spied out. Nevertheless, he determined to dare all, and one black night slipped his cables, and with all lights out, and running-gear muffled, glided swiftly out of the harbor. In the distance he could see the lights of the "Iroquois," as she steamed slowly up and down in the offing, like a sentry on guard. Up in the cross-trees of the "Sumter" sat a sharp-eyed old quarter-master, with orders not to mind the "Iroquois," but to keep a close watch on the suspected schooners. Soon a light gleamed from the main-top of each. Semmes's suspicions grew. "They have signalled our course," said he: "we'll double." The ship's head was quickly brought about, and headed south; then all turned to watch the movements of the "Iroquois." She had headed northward, and was exerting every power to catch the flying vessel supposed to be just ahead. Satisfied with having so successfully humbugged the enemy, the "Sumter" proceeded leisurely on her course to the southward, leaving the "Iroquois" steaming furiously in the opposite direction. "I do think, however," writes Capt. Semmes in his log-book, "that a tough old quarter-master, and a grizzled boatswain's mate, who had clean shaven their heads in preparation for a desperate fight, were mightily disgusted."

The subsequent career of the "Sumter" was uneventful. She captured but few more vessels; and in January of the next year ran into the harbor at Gibraltar, where she was blockaded by a powerful United States frigate, and finally sold as being worn out. She had been in commission a little over a year, and in that time had captured eighteen vessels, burned seven, and released two on a heavy ransom to be paid to the Confederate Government at the end of the war. It is needless to say these ransoms were never paid. Capt. Semmes, with his crew, proceeded to England, and took command of a mysterious ship, "No. 290," just built at Liverpool, which soon appeared on the high seas as the dreaded "Alabama."

CHAPTER IV.

THE POTOMAC FLOTILLA.—CAPTURE OF ALEXANDRIA.—ACTIONS AT MATTHIAS POINT,—
BOMBARDMENT OF THE HATTERAS FORTS.

IN petty skirmishes and in general inactivity the forces of both contestants idled away the five months following the fall of Fort Sumter. The defeat of the Union armies at Bull Run had checked active operations along the Potomac. On either side of the river the hostile armies were drilling constantly to bring the raw recruits down to the efficiency of trained soldiers. Four hundred thousand men lay in hostile camps within sight of each other. From the national Capitol at Washington the stars and bars of the Confederate flag could be seen floating over the camp at Arlington. Occasionally the quiet would be broken by the crack of a rifle, as some straggler, on one side or the other, took a casual shot at the sentry pacing on the other side of the broad stream. Sometimes a battery would come driving down to the shore, select an advantageous spot, and begin an afternoon's target practice at the hostile camp; but the damage done was immaterial, and after wasting much powder and shot the recruits would limber up their guns and return to their camp. It would have been easy, at almost any time, for either army to have crossed the Potomac and invaded the territory of the enemy; but each hung back in apparent dread of taking the first decisive step.

Abraham Lincoln at this time illustrated the existing condition of affairs, by one of those stories which have made him celebrated as a *raconteur*. A number of politicians, calling at the White House, spoke of the apparent inactivity of the army authorities, and demanded that some decisive move should be made; some powerful preparations to beat back the enemy should be attempted to cross the Potomac. "Gentlemen," said Lincoln, with the twinkle in his eye that always foretold a story, "when I was a boy I saw an incident which I have always recollected, and which seems to me to resemble very much the attitude now assumed by the parties in this impending war. My father owned a dog,—a particularly vicious,

FLAG OF THE CONFEDERACY.

aggressive, and pugnacious bull-terrier, — one of these fellows with heavy, short necks, and red, squinting eyes, that seem ever to be on the look-out for a fight. Next door to us lived a neighbor who likewise rejoiced in the possession of a canine of appearance and habits of mind similar to our pet. From the date of their first

meeting these dogs had been deadly enemies, and had growled and yelped at each other through the picket-fence separating the two yards, until we were forced to keep at least one dog chained continually. The strained relations between the dogs became a matter of general interest, and speculations were rife among the neighbors as to the probable outcome of a hostile meeting. Those were the times when a lively dog-fight would draw the merchant from his counter, and the blacksmith from his anvil; and it is even on record that an honorable judge once hurriedly adjourned his court at the premonitory sounds of snarling in the court-house square. Well, the knowledge that two dogs, pining for a fight, were being forcibly restrained, was too much to be borne by the people of the village; and a plot was concocted for bringing about a fight. One night two pickets were surreptitiously removed from the fence, leaving an opening of ample size to permit a dog to pass. In the morning our dog was sunning him

self in the yard, when the neighbor's dog rushed to his side of the fence, and made remarks not to be borne by any self-respecting canine. Then began the usual performance of snarls and barks, and baring of white teeth, as the dogs made frantic efforts to get at each other. The neighbors assembled in a crowd, and the knowing ones predicted a lively time when those two dogs found the hole in the fence. Down the line of the fence the two curs walked, their eyes glaring, their jaws snapping, their tongues out, and dropping foam. The racket was tremendous. At each place where the pickets were a little spread, they redoubled their efforts to clinch. They approached the opening. The interest of the spectators redoubled. Now they reached the spot; sprung at each other; their jaws touched,—and each, dropping his tail, slunk away to his kennel. Gentlemen, the attitude of these armies reminds me of that dog-fight."

While the armies of the two contestants were thus idly resting upon their arms, the navy was obliged to discharge duties, which, while they brought some danger, did not gain glory for either officers or men. The joys of Washington society were not for the naval officers. The applicant for promotion, who, when asked by an examiner, "Where is the post of a colonel when his regiment is drawn up for battle?" responded promptly, "In Washington," had been serving in the army, and not with the naval corps. Besides the duties of the officers detailed upon the blockading service, there remained to the navy the arduous task of patrolling the Potomac River, and preventing as far as possible communication between the shores.

This work, as may be readily understood, demanded the most untiring vigilance and the most unflagging energy. The shores on each side of the Potomac are indented with bays and tributary streams in which a sloop or large row-boat can easily be concealed during the day. At night it was impossible to prevent boats laden with contraband goods, or conveying the bearers of secret despatches, slipping across the river from the northern side, and running into the concealment afforded by the irregularity of the Virginia shore-line. Even at this early period of the war, the vigorous blockade of the Confederate sea-ports had created a great lack of many necessities in the Southern States. Particularly did the lack of quinine afflict the people of those malarial sections comprised within the limits of the South Atlantic and Gulf States. So great was the demand for this

drug, that the enormous sums offered for it led many a speculative druggist north of Mason and Dixon's line to invest his all in quinine, and try to run it through the Potomac blockade. Of course, as the traffic was carried on in small boats, it was impossible to break it up altogether; though by the efforts of the navy it was almost destroyed.

Briefly stated, the duties of the Potomac flotilla may be said to have been to patrol the river from Washington to its mouth, to inspect both sides *daily* if possible, and to observe whether any preparations for batteries were being made at any point, and watch for any transports with troops or provisions, and convoy them to Washington. The flotilla consisted of small vessels, lightly armed; the "Pawnee," the heaviest of the fleet, being a sloop of less than thirteen hundred tons, with a battery of fifteen guns, none of long range. Clearly such an armada as this could be of but little avail against the earthworks which the Virginians were busily erecting on every commanding bluff.

Toward the later part of May, 1861, the Federal Government determined to send troops across the river and occupy the city of Alexandria. The "Pawnee" had for some days been lying off the town, completely covering it with her batteries. She had held this position without making any offensive movement; as her commander understood, that, even should he compel the town to surrender, he had not the men necessary for holding the position. On the morning of the 24th, Commander Rowan saw two steamers coming down the river, laden with Federal troops. He at once sent a boat ashore, and demanded the surrender of the city, which was immediately evacuated by the Virginian troops. When the army of occupation landed, it proved to be Ellsworth's famous Zouave Regiment, made up largely of the firemen and "Bowery boys" of New York City. Ellsworth, while marching through the streets at the head of his command, saw a Confederate flag floating from a mast on top of a dwelling. With two of his men he proceeded to enter the house, go on the roof, and tear down the flag. As he came down the stairs, a man carrying a gun stepped from a doorway, and demanded what he did there. "This is my trophy," cried Ellsworth, flourishing the bit of striped bunting. "And you are mine," responded the man, quickly bringing his gun up, and discharging it full into Ellsworth's breast. The two Zouaves, maddened at the death of their commander, shot the slayer through the brain, and plunged their bayonets

into his body before he fell. Ellsworth's death created the greatest excitement in the North, as it was almost the first blood shed in the war. While the capture of Alexandria was in itself no great achievement, it was of importance as the first move of the Northern armies into Virginia.

Had the efforts of the navy towards keeping the Potomac clear of hostile batteries been supplemented by a co-operating land force, an immense advantage would have been gained at the very outset. As it was, all that could be done was to temporarily check the exertions of the enemy. A battery silenced by the guns from the ships in the daytime could be, and usually was, repaired during the night, and remained a constant menace to the transports going to or from Washington. Under such circumstances, the work of the Potomac flotilla could only be fatiguing and discouraging. Much of it had to be performed in row-boats; and the crews of the various vessels were kept rowing up and down the banks of the river, making midnight excursions up creeks to examine suspected localities, and lying in wait for smugglers, and the mail-carriers and spies of the enemy. They were in continual danger of being opened upon by masked batteries and concealed sharp-shooters. The "prize money," the hope of which cheers up the man-o'-wars-man in his dreariest hours, amounted to nothing; for their prizes were small row-boats and worthless river-craft. The few engagements with the enemies' batteries brought little glory or success. In one battle on the 29th of May, 1861, a flotilla, consisting of the "Thomas Freeborn" (a paddle-wheel steamer, carrying three guns), the "Anacostia," and the "Resolute" (a little craft of ninety tons and two guns), engaged the batteries at Aquia Creek, and pounded away with their pygmy guns for two hours, without doing any visible damage. Two days later the bombardment was renewed, and two of the vessels were slightly damaged. A more serious event occurred at Matthias Point in the latter part of June. Matthias Point was one of the chief lurking-places of the Confederate guerillas, who, concealed in the dense undergrowth along the banks of the Potomac, could pour a destructive fire into any vessels that passed. Commander J. H. Ward of the "Freeborn" planned to break up this ambush, sending a landing party to cut away the trees and undergrowth. The landing party, commanded by Lieut. Chaplin, was to be covered by the guns of the "Freeborn" and "Reliance." It was late in the afternoon when they pushed off for the shore. All seemed

quiet; and the bursting of the shells, which were occasionally dropped into the woods, seemed to have driven the enemy away. Hardly, however, had the sailors begun the work of hewing down the undergrowth, when from all quarters a hot fire was begun, driving them to their boats in a rout. The decks of the two vessels were swept by the storm of lead. Commander Ward, while sighting the bow-gun of the "Freeborn," was struck in the abdomen by a bullet, and died in a few minutes. On the shore the sailors were hurrying into the boats and pushing off to avoid capture. Lieut. Chaplin acted with great bravery, and succeeded in getting all his men away, with their muskets. The last man left on the shore was unable to swim; and Chaplin, taking him on his shoulders, bore him safely to the boat. Though the fire of the enemy was concentrated on the two, neither was hurt, although a minie-ball passed through the lieutenant's cap.

Two months later this same locality was the scene of another bloody disaster to the Union arms. On the 16th of August the "Resolute" and the "Reliance" were ordered to make a reconnoissance of the neighborhood of Matthias Point. After steaming about the shore for some time, and noticing nothing of a suspicious character, a boat was seen on the Virginia shore, and an officer and five men despatched to capture her. They had just reached her, and were in the act of making fast, when a volley of musketry was fired from the bushes not more than five yards away, and three of the crew were instantly killed, and one wounded. The watchers on the war-vessels, lying in the river, sprang to their guns, and threw several rounds of shell into the cover that sheltered the enemy, soon driving them away. The two uninjured men in the boat succeeded in getting her away with her load of dead and dying.

It is easy to understand how exasperating, how infuriating, such service as this must have been to the officers and men of the navy. For a man to risk his life in the heat and excitement of a battle, is as nothing to the feeling that one may be at any time caught in a death-trap, and slaughtered in cold blood.

A more successful expedition was organized in October, by Lieut. Harrill of the steamer "Union." He had been informed that a large schooner was lying in Quantico Creek, and that the Confederates were massing a number of troops there for the purpose of crossing the river. He at once determined to destroy the schooner. Accordingly he manned

three boats at half-past two in the morning, and in the darkness proceeded, with muffled oars, toward the mouth of the creek. Here some difficulty was experienced, as the entrance is narrow and obstructed by sandbars; but working energetically, and in perfect silence, the sailors overcame all obstacles. Once in the creek, they pulled rapidly along within pistol-shot of the shore, until the tall masts of the schooner could be descried in the

NAVAL PATROL ON THE POTOMAC.

darkness. One sentry was on guard, who fled wildly as he saw the mysterious boat emerge from the darkness of the night. The grappling-irons were thrown aboard, and the jackies swarmed nimbly up the sides, and began the work of destruction. A huge pile of combustibles was made in the cabin, and hastily set on fire. The flames spread rapidly; and, though they insured the destruction of the schooner, they also lighted up the creek, showing the boats with the sailors bending to their oars to escape the

storm of bullets that they knew must follow. The glare of the burning schooner, the reflection of the flames on the water, the flash of the rifles from the shores made a wild picture. Occasionally a flash from the river was followed by a deep boom, as a heavy shot left the muzzle of a cannon on the steamers. But through it all, the men escaped; and the projected invasion of the Confederates was abandoned, owing to the loss of their schooner.

All through the war this untiring patrol of the Potomac was continued. Among miasmatic vapors and clouds of noxious insects on mud-flats, in narrow channels whose densely wooded banks might conceal legions of hostile sharp-shooters, the river navy kept up its work. Earning but little glory, though in the midst of constant peril, the officers and men kept up their work, and contributed not a little to the final outcome of the great conflict.

All this time the officers of the naval vessels, riding at anchor in Hampton Roads, were chafing under the enforced idleness. Even the occasional artillery duels with which their army brethren whiled away the time were denied to the wistful blue-jackets. Beyond an occasional chase, generally useless, after a fleet blockade-runner, the sailors had absolutely no employment. At last, however, the opportunity came. The first great naval expedition of the war was set under way.

From Cape Henry, at the mouth of the James River, the coast of Virginia and North Carolina sweeps grandly out to the eastward, like a mammoth bow, with its lower end at Beaufort, two hundred miles south. Along this coast-line the great surges of mighty ocean, rolling with unbroken course from the far-off shore of Europe, trip and fall with unceasing roar upon an almost uninterrupted beach of snowy sand, a hundred and more miles long. Near the southern end of this expanse of sand stands a lighthouse, towering solitary above the surrounding plain of sea and sand. No inviting beacon giving notice to the weary mariner of safe haven is this steady light that pierces the darkness night after night. It tells of treacherous shoals and roaring breakers; of the loss of many a good ship, whose ribs, half buried in the drifting sand, lie rotting in the salt air; of skies ever treacherous, and waters ever turbulent. It is the light of Hatteras.

Some twenty miles below Cape Hatteras light occurs the first great

opening in the stretch of sand that extends south from Cape Henry. Once he has passed through this opening; the mariner finds himself in the most peaceful waters. The great surges of the Atlantic spend themselves on the sandy fringe outside, while within are the quiet waters of Pamlico and Albemarle Sounds, dotted with fertile islands, and bordering a coast rich in harbors. The wary blockade-runner, eluding the watchfulness of the United States blockaders cruising outside, had but to pass the portals of Hatteras Inlet, to unload at his leisure his precious cargo, and load up with the cotton which grew in great abundance on the islands and fertile shores of the sound.

Recognizing the importance of this harbor, the Confederates had early in the war fortified the point north of Hatteras Inlet. Shortly after the fall of Fort Sumter, a Yankee skipper, Daniel Campbell, incautiously running his schooner the "Lydia Francis" too near the stormy cape, was wrecked, and sought shelter among the people at the inlet. When, some days after, he proposed to leave, he was astounded to find that he had been delivered from the sea only to fall a prey to the fortunes of war. He was kept a prisoner for three months; and on his release, going directly to Fortress Monroe, he proved that he had kept his eyes open to some purpose. He reported to flag-officer Stringham that the Confederates had two batteries,—one of ten, the other of five guns,—known as Fort Hatteras and Fort Clark. With these two forts the Confederates claimed that they could control the entrance to Albemarle Sound.

As soon as this information was received, an expedition for the destruction of these forts was organized. It was necessarily chiefly naval, although a land force under Gen. Butler went with the fleet. On Aug. 25, 1861, Hampton Roads presented a scene of the greatest activity. The fleet seemed to have awakened from a long sleep. Every vessel was being hastily prepared for sailing. Two transports, the "George Peabody" and the "Adelaide," were crowded with the soldiers of Gen. Butler's command. From the mainmast of the flag-ship "Minnesota" waved the signal-flags, changing constantly as different orders were sent to the commanders of the other war-ships. At two o'clock three balls of bunting were run up to the truck, and catching the breeze were blown out into flags, giving the order, "Get under way at once." From the surrounding men-of-war came the shrill pipe of the boatswains' whistle, and the steady tramp of the men at

the capstan bars as they dragged the anchors to the cat-heads. The nimble blue-jackets, climbing about the shrouds and yards, soon had the snowy clouds of canvas set. The wind was fresh; and with bands playing, and cheers of blue-jackets and soldiers, the stately squadron sailed down the bay.

But none on board, save the superior officers, knew whither the fleet was bound. Hardly were they fairly on the Atlantic, when the course was shaped to the southward, and that much was settled. But whether New Orleans, Charleston, or Beaufort was the point to be attacked, the sailors did not know.

The squadron which sailed from Hampton Roads consisted of the war-vessels "Minnesota," "Wabash," "Pawnee," "Monticello," and "Harriet Lane;" the transports "George Peabody" and "Adelaide;" and the tug "Fanny." Soon after rounding Cape Henry, the vessels became separated; and when the other vessels reached Hatteras, on the 27th, the "Minnesota" and "Wabash" were nowhere to be seen. As these were the most powerful frigates of the fleet, great fears were felt for the success of the expedition; but at last they appeared on the horizon. A place for landing was selected, and the vessels withdrew into the offing to spend the night. It was determined to begin the attack early the next day.

The morning dawned clear, with a calm sea. At four o'clock the men were summoned to breakfast. At seven the operation of landing the troops was begun. All the surf-boats, barges, and life-boats in the fleet were put to the work. The great war-vessels moved into position, and prepared to cover with a terrific fire the landing of the troops. The first shot was fired by the "Wabash," and the cannonading was at once taken up by the rest of the fleet. The vessels were placed so that a whole broadside could be discharged at once. Thousands of pounds of iron balls were thrown into the forts. Under cover of the cannonading, the disembarkation of the troops began.

But the opposition of the enemy was not the only difficulty to be met. During the time consumed in getting ready to land, heavy banks of clouds had been crawling up from the horizon, and the soft wind of morning had grown into a steady blow. Cape Hatteras was true to its reputation. On the shelving beach, where the troops must land, the great rollers were breaking in torrents of foam. The first life-boats that attempted the landing were swamped, and the soldiers reached the land wet and chilled

through. The surf-boats were stove in. The barges, which had been relied upon to land men in large numbers, proved unmanageable, and were towed away by the "Harriet Lane." When the attempt to land the troops was given up, it was found that but three hundred and twenty men had

ATTACK ON THE HATTERAS FORTS.

been landed. This was too small a party to storm the forts, and the issue of the battle depended upon the great guns of the navy.

By this time the gunners on the ships had calculated the exact range, and were firing with fearful effect. Broadside followed broadside, with

the regularity of machinery. It was war without its horrors for the blue-jackets, since bad marksmanship or poor powder prevented the Confederate gunners doing any damage. On the gun-deck of the superb frigate "Minnesota," the jackies were working their guns as coolly as though they were on drill. The operations of loading and firing were gone through with like clock-work. The officers could watch the course of the shells until they struck, and instruct the men, without undergoing any danger.

But in the forts the scene was one of terror. As soon as the gunners of the fleet had secured the range, the shells began crashing into the fort, bewildering the untried soldiers, and driving them from their guns. A shell falling in the fort, and bursting, would sweep clean a space thirty feet square. It was madness to try to work the guns. All sought refuge in the bomb proofs, and an occasional shot was all that showed the presence of any defenders in the forts. Soon the Confederates decided to abandon Fort Clark, the smaller of the two, and mass their forces in Fort Hatteras. As a ruse, to check the bombardment of the ships, the flags on both forts were hauled down. This was, of course, taken as a token of surrender; and as the cannonading stopped, and the clouds of gray gunpowder-smoke lifted, the shrouds of the bombarding squadron were filled with men, and cheer upon cheer rang out in honor of the victory. Soon the troops occupied the deserted battery, and the "Monticello" was ordered into the inlet to take possession of Fort Hatteras. She had proceeded only a little way, however, when suddenly a heavy fire was opened upon her from the fort, and at the same time a large body of re-enforcements was seen approaching from the south. The gunners came down from the shrouds, stopped cheering, and began their work again. For a time the "Monticello" was in a dangerous position. In a narrow and unknown channel, she was forced to retreat slowly, under heavy fire from the fort, being hit eight times. The heavy fire of the other vessels, however, soon drove the Confederate gunners from their guns. The sailors worked untiringly, and seemed enraged by the deceit practised by the enemy. One man, while sponging out a gun, preparatory to reloading it, dropped his sponge overboard. Quick as thought he vaulted the gunwale, and re-appeared on the surface of the water swimming for the sponge. Recovering it, he in a few moments crawled dripping through a porthole, to report respectfully to the captain of the gun: "Just come aboard, sir."

The fort abandoned by the Confederates had been occupied by the troops that had been landed ; and, under cover of the furious bombardment, the work of landing was vigorously prosecuted. Night came, and with it a gale so heavy that the vessels had to desert their stations, and withdraw into the offing. When the morning broke, however, the sea had calmed sufficiently to allow the gunners to again set about their terrible work.

The second day's firing was even more accurate than that of the first ; and the gray-coats were soon compelled to retire to the bomb-proofs, and abandon all attempt to return the fire of the ships. Soon three shells in rapid succession burst close to the magazine of the fort, telling plainly to the affrighted defenders that nothing was left for them but surrender. A white flag was raised, and Commodore Barron went off to the fleet to formally surrender the forts and the eight hundred men of his command. When the terms were concluded, the defeated soldier turned to flag-officer Stringham, and asked if the loss of life on the ships had been very large. "Not a man has been injured," was the response. "Wonderful!" exclaimed the questioner. "No one could have imagined that this position could have been captured without sacrificing thousands of men." But so it was. Without the loss of a man, had fallen a most important post, together with cannon, provisions, and nearly seven hundred men.

CHAPTER V.

THE "TRENT" AFFAIR.—OPERATIONS IN ALBEMARLE AND PAMLICO SOUNDS.—DESTRUCTION OF THE CONFEDERATE FLEET.

EARLY in the war an event occurred which for a time seemed likely to bring England to the aid of the Confederates. The Confederate Government had appointed as diplomatic commissioners to England two gentlemen, Messrs. Mason and Slidell. They had escaped from Mobile on a fleet blockade-runner, and reached Havana, where they remained a week waiting for the regular English packet to convey them to Liverpool. While in Havana they were lavishly entertained by the colony of Confederate sympathizers there; and feeling perfectly safe, now that they were outside the jurisdiction of the United States, they made no attempt to conceal their official character, and boasted of the errand upon which they were sent.

The United States frigate "San Jacinto," which was one of the many vessels kept rushing about the high seas in search of the privateer "Sumter," happened to be in the harbor of Havana at this time. She was commanded by Capt. Wilkes, an officer who had made an exhaustive study of international law, particularly as bearing upon the right of a war-vessel to search a vessel belonging to a neutral nation. Capt. Wilkes, knowing that by capturing the Confederate commissioners, he could win for himself

the applause of the entire North, determined to make the attempt. By a study of his books bearing on international law, he managed to convince himself that he was justified in stopping the British steamer, and taking from it by force the bodies of Messrs. Mason and Slidell. Accordingly he set sail from the harbor of Havana, and cruised up and down at a distance of more than a marine league from the coast, awaiting the appearance of the vessel. Five days after the "San Jacinto's" departure, the commissioners set sail in the British mail-steamer "Trent." She was intercepted in the Bahama Channel by the "San Jacinto." When the man-of-war fired a blank cartridge as a signal to heave to, the commander of the "Trent" ran the British flag to the peak, and continued, feeling secure under the emblem of neutrality. Then came a more peremptory summons in the shape of a solid shot across the bows; and, as the incredulous captain of the "Trent" still continued his course, a six-inch shell was dropped within about one hundred feet of his vessel. Then he stopped. A boat put off from the "San Jacinto," and made for the "Trent." Up the side of the merchant-vessel clambered a spruce lieutenant, and demanded the immediate surrender of the two commissioners. The captain protested, pointed to the flag with the cross of St. George waving above his head, and invoked the power of her Britannic majesty, — all to no avail. The two commissioners had retired to their cabins, and refused to come out without being compelled by actual force. The boat was sent back to the "San Jacinto," and soon returned with a file of marines, who were drawn up with their muskets on the deck of the "Trent." Every British ship which carries mails carries a regularly commissioned officer of the navy, who is responsible for them. This officer on the "Trent" was somewhat of a martinet, and his protests at this violation of the rights of a neutral vessel were very vigorous. When the first gun was fired, he rushed below, and soon re-appeared in all the resplendent glory of gold lace and brass buttons which go to make up a naval uniform. He danced about the deck in an ecstasy of rage, and made the most fearful threats of the wrath of the British people. The passengers too became excited, and protested loudly. Every thing possible was done by the people of the "Trent" to put themselves on record as formally protesting. Nevertheless, the commissioners were taken away, carried to New York, and from there sent into confinement at Fort Warren.

When the news of this great achievement became known, Wilkes was made the lion of the hour. Unthinking people met and passed resolutions of commendation. He was tendered banquets by cities. He was elected a member of learned societies in all parts of the country, and was generally eulogized. Even the Secretary of the Navy, who should have recognized the grave troubles likely to grow out of this violation of the principles of neutrality, wrote a letter to Capt. Wilkes, warmly indorsing his course, and only regretting that he had not captured the steamer as well as the two commissioners.

But fortunately we had wiser heads in the other executive departments of the government. President Lincoln and Secretary Seward quickly disavowed the responsibility for Wilkes's action. Letters were written to the United States minister in England, Charles Francis Adams, alluding to the proceeding as one for which Capt. Wilkes as an individual was alone responsible. And well it was that this attitude was taken : for hardly had the news reached England, when with one voice the people cried for war. Sympathizing with the South as they undoubtedly did, it needed but this insult to the British flag to rouse the war spirit of the nation. Transports loaded with troops were immediately ordered to Canada; the reserves were called out; the ordnance factories were set running day and night; while the press of the nation, and the British minister at Washington, demanded the immediate release of the captives, and a full apology from the United States.

The matter was conducted on this side with the utmost diplomacy. We were undoubtedly in the wrong, and the only thing was to come out with as little sacrifice of national dignity as possible. The long time necessary for letters to pass between this country and England was an important factor in calming the people. Minister Adams said, that, had the Atlantic cable then been in operation, nothing could have prevented a war. In the end the demands of Great Britain were acceded to, and the commissioners proceeded on their way. The last note of the diplomatic correspondence was a courteous letter from President Lincoln to the British minister, offering to allow the British troops *en route* for Canada to land at Portland, Me., and thus avoid the long winter's march through New Brunswick. The peaceful settlement of the affair chagrined the Confederates not a little, as they had hoped to gain Great Britain as a powerful ally in their fight against the United States.

Soon after the capture of the forts at Hatteras Inlet, the authorities of the Union again turned their attention in that direction, with the result of sending the Burnside expedition to Albemarle Sound.

The coast of North Carolina is honeycombed with rivers, inlets, and lagoons, which open into the two broad sounds known as Pamlico and Albemarle, and which are protected from the turbulence of the Atlantic by the long ridge of sand which terminates at Cape Hatteras. While the capture of the Hatteras forts had given the Union authorities control of Hatteras Inlet, the chief entrance to the sounds, yet the long, narrow island was broken by other lesser inlets of a size sufficient to permit the passage of light-draught steamers. The Confederates had quite a fleet of swift, light vessels of insignificant armament, often only a single gun, with which they occasionally made a descent upon some coaster or merchantman, running close inshore, and dragged her in as a prize. With these swift steamers, too, they effectually controlled all navigation of the sounds. But the greatest advantage that they derived from their control of the sounds was the vast facilities given them for constructing, at their leisure, powerful iron-clads in some of the North Carolina ship-yards; then sending them to reduce the Hatteras forts, and so out into the Atlantic to fight for the destruction of the blockade. All these conditions were clear to the authorities of the Union; and therefore, in the early part of January, 1862, a joint military and naval expedition was fitted out for operation against the Confederate works and steamers in these inland waters. It was in the early days of the war; and the flotilla was one of those heterogeneous collections of remodelled excursion-steamers, tugs, ferry-boats, and even canal-boats, which at that time was dignified with the title of "the fleet." In fitting out this expedition two very conflicting requirements were followed. In the most favorable circumstances, the channel at Hatteras Inlet is seldom over seven and a half feet: consequently the vessels must be of light draught. But the Confederate steamers in the sounds carried heavy rifled cannon, and the armament of the forts on Roanoke Island was of the heaviest: therefore, the vessels must carry heavy guns to be able to cope with the enemy. This attempt to put a heavy armament on the gun-deck made the vessels roll so heavily as to be almost unseaworthy.

In addition to the armed vessels belonging to the navy, a number of transports accompanied the expedition, bearing the army corps under the

SPANISH MERCHANT STEAMER "CATALINA" CAPTURED BY CRUISER "DETROIT"
APRIL 24, 1898

command of Gen. Burnside; and the whole number of craft finally assembled for the subjugation of the North Carolina sounds was one hundred and twenty. This heterogeneous assemblage of vessels was sent on a voyage in the dead of winter, down a dangerous coast, to one of the stormiest points known to the mariner. Hatteras was true to its reputation; and, when the squadron reached the inlet, a furious north-easter was blowing, sending the gray clouds scudding across the sky, and making the heavy rollers break on the beach and the bar in a way that foretold certain destruction, should any hardy pilot attempt to run his ship into the narrow and crooked inlet. Outside there was no safe anchorage, and the situation of the entire squadron was most precarious. Several serious mishaps occurred before the vessels got into the small and altogether insufficient harbor between the seaward bar and the "bulkhead" or inner bar. The first vessel to come to grief was one of the canal-boats laden with hay, oats, and other stores. She was without any motive power, being towed by a steam-tug, and, getting into the trough of the sea, rolled and sheered so that she could not be towed. The heavy rolling started her seams, and it was soon evident that she was sinking. With the greatest caution a boat was lowered from one of the steamers, and put off to rescue the crew of the foundering craft. Laboriously the sailors worked their way through the tossing sea to the lee side of the "Grape-shot," and after much difficulty succeeded in taking off all on board, and the return trip was commenced. All went well until the boat came under the lee of the steamer, and the men were about to clamber up the sides. Suddenly an immense sea lifted the vessel high in the air; and in an instant the boat was swamped, and the men were struggling in the icy water. All were ultimately saved, but it was with the greatest difficulty. The "Grape-shot," left to her fate, went ashore some fourteen miles above Hatteras. Her cargo served some practical use, after all; for some horses from the wreck of the "Pocahontas" managed to reach the shore, and kept themselves alive by munching the water-soaked hay and oats.

The "Pocahontas" was one of the steamers chartered by the war department as a horse transport. Her actions during this gale furnish a fair illustration of the manner in which the Government was often deluded into purchasing almost valueless ships. She started with the Burnside expedition from Hampton Roads, freighted with one hundred

and thirteen horses. As soon as the gale off Hatteras came on, she began to show signs of unseaworthiness. First the boilers gave way, loosened from their places by the heavy rolling of the ship. All progress had to be stopped until they were patched up. Then down fell the grates, extinguishing the fires. Then the steering-gear was broken; and, getting into the trough of the sea, she rolled until her smoke-stack broke its moorings and fell over. Finally she sprung a leak and was run ashore. The crew were all saved, but for a long time their chances for life seemed small indeed. Ninety of the horses were lost, some having been thrown overboard ten miles from the land. Others were left tied in their stalls, to perish when the ship went to pieces in the breakers. Those that were thrown overboard near the beach swam ashore through breakers in which no boat nor man could live, and, finding the waste and wreckage from the cargo of the "Grape-shot," lived for days on the hay and oats, soaked with sea-water though they were.

For two days this gale continued. The out-look for the fleet seemed hopeless. The inner bar of the harbor was absolutely impassable. Between the outer bar and the inner were packed seventy vessels. This space, though called a harbor, was almost unsheltered. Crowded with vessels as it was, it made an anchorage only less dangerous than that outside. Although the vessels were anchored, bow and stern, the violence of the sea was such that they frequently crashed into each other, breaking bulwarks, spars, and wheel-houses, and tearing away standing-rigging. A schooner breaking from its anchorage went tossing and twirling through the fleet, crashing into vessel after vessel, until finally, getting foul of a small steamer, dragged it from its moorings; and the two began a waltz in the crowded harbor, to the great detriment of the surrounding craft. At last the two runaways went aground on a shoal, and pounded away there until every seam was open, and the holds filled with water.

A strange mishap was that which befell the gunboat "Zouave." She was riding safely at anchor, remote from other ships, taking the seas nobly, and apparently in no possible danger. Her crew occupied themselves in going to the assistance of those in the distressed vessels, feeling that their own was perfectly safe. But during the night, the tide being out, the vessel was driven against one of the flukes of her own anchor; and as each wave lifted her up and dropped her heavily on the sharp iron, a hole was

stove in her bottom, sinking her so quickly that the crew took to the boats saving nothing.

But the most serious disaster was the total wreck of the "City of New York," a large transport, with a cargo of ordnance stores valued at two hundred thousand dollars. Unable to enter the inlet, she tried to ride out the gale outside. The tremendous sea, and the wind blowing furiously on shore, caused her to drag her anchors; and those on board saw certain death staring them in the face, as hour by hour the ship drifted nearer and nearer to the tumbling mass of mighty breakers, that with an unceasing roar, and white foam gleaming like the teeth of an enraged lion, broke heavily on the sand. She struck on Monday afternoon, and soon swung around, broadside to the sea, so as to be helpless and at the mercy of the breakers. Every wave broke over her decks. The condition of her crew was frightful. In the dead of winter, the wind keen as a razor, and the waves of icy coldness, the body soon became benumbed; and it was with the greatest effort that the men could cling to the rigging. So great was the fury of the wind and waves, that no assistance could be given her. For a boat to venture into that seething caldron of breakers would have been throwing away lives. So the crew of the doomed ship were left to save themselves as best they might. The night passed away, and Tuesday morning saw the gale still blowing with unabated force. Hoping to lessen the strain on the hull, they cut away the foremast. In falling, it tore away the pipes, and the vessel became a perfect wreck. Numbed with cold, and faint for lack of food, the crew lashed themselves to the bulwarks and rigging; and so, drenched by the icy spray, and chilled through by the wind, they spent another fearful night. The next day the fury of the storm seemed to have somewhat abated. The sea was still running high, and breaking over the almost unrecognizable hulk stranded on the beach. With the aid of a glass, sailors on the other ships could see the inanimate forms of the crew lashed to the rigging. It was determined to make a vigorous attempt to save them. The first boat sent out on the errand of mercy was watched eagerly from all the vessels. Now it would be seen raised high on the top of some tremendous wave, then, plunging into the trough, it would be lost from the view of the anxious watchers. All went well until the boat reached the outermost line of the breakers, when suddenly a towering wave, rushing resistlessly along, broke directly over the stern, swamping the boat, and

drowning seven of the crew. Again the last hope seemed lost to the exhausted men on the wreck. But later in the day, the sea having gone down somewhat, a steam-tug succeeded in reaching the wreck and rescuing the crew. The second engineer was the last man to leave the ship. He remained lashed to the mast until all were taken on the tug. Then, climbing to the top-mast, he cut down the flag that had waved during those two wild days and nights, and bore it safely away.

After this gale died away, the work of getting the squadron over the inner bar was begun. It was a tremendous task. Many of the ships drew too much water for the shallow channel, and it was necessary to remove large parts of their cargoes. The bar, which is known as Buckhead Shoal, was an expanse of quicksand a mile wide, with a tortuous channel ever changing with the shifting sands. Many of the ships stranded, and the tugs were constantly busy in towing them off. Scarcely would one be safely afloat, than another would "bring up all standing" on some new shoal. Two weeks elapsed before all the vessels were safe within the landlocked sound. They were none too soon; for hardly had the last vessel crossed the bar, than the black gathering clouds, the murky, tossing sea, and the foaming billows breaking on the bar, foretold another of the storms for which Cape Hatteras is famed. Through the storm a queer-looking craft was seen approaching the fleet. It was found to be a boat-load of escaping slaves, who had put to sea at random, feeling sure of finding "de Yankees" somewhere. From these men much valuable information was obtained.

Up to this time no one in the fleet, excepting the superior officers, was informed as to the exact destination of the expedition. Now as the signal to get under way blew out from the foremast of the flag-ship, and as the prow of the leading vessel was turned to the northward, all knew, and all cried, "Roanoke Island." This island was heavily fortified by the Confederates, and from its position was a point of considerable strategic importance. It guards the entrance to Pamlico Sound from Albemarle Sound, and into Pamlico Sound open great bays and rivers that penetrate far into the interior of Virginia and North Carolina. On this island the Confederates had erected three forts of formidable strength. These forts commanded the channel through which the vessels would have to pass; and to make the task doubly dangerous, the channel was obstructed with

sharpened piles and sunken hulks, so as to be apparently impassable. Beyond the obstructions was the Confederate fleet, which, though insignificant compared with the attacking squadron, was formidable in connection with the forts. It was the task of the invaders to capture these forts, and destroy the fleet.

It was on Feb. 5 that the squadron prepared to leave its moorings at Hatteras Inlet. It was an imposing spectacle. The flag-ship "Philadelphia" led the naval squadron, which advanced with the precision of a body of troops. Behind, with less regularity, came the army transports. About one hundred vessels were in the three columns that moved over the placid waters of the sound toward the forts. It was five in the afternoon of a short February day that the fleet came in sight of the forts. Signals were made for the squadron to form in a circle about the flag-ship. The early darkness of winter had fallen upon the scene. The waters of the sound were smooth as a mill-pond. From the white cottages on the shore gleamed lights, and brilliant signal-lanterns hung in the rigging of the ships. Through the fleet pulled swift gigs bearing the commanders of the different vessels.

The morning dawned dark and rainy. At first it was thought that the fog and mist would prevent the bombardment, but all doubt was put at an end by the signal, "Prepare for action," from the flag-ship. The drums beat to quarters, and soon the guns were manned by sailors stripped to the waist. The magazines were opened; and the surgeons cleared away the cock-pits, and spread out their glistening instruments ready for their work.

The fleet got under way, and stood up the channel almost to the point where the obstructions were planted. Beyond these were the gunboats of the enemy. The cannonade was begun without loss of time. A portion of the fleet began a vigorous fire upon the Confederate gunboats, while the others attacked the forts. The gunboats were soon driven away, and then the forts received the entire fire. The water was calm, and the aim of the gunners was admirable. The forts could hardly respond to the fire, since the great shells, plunging by hundreds into the trenches, drove the men from their guns into the bomb-proof casemates. The officers of the ships could watch with their glasses the effect of every shell, and by their directions the aim of the gunners was made nearly perfect.

While the bombardment was going on, Gen. Burnside set about landing his troops near the southern end of the island. The first boat was fired upon by soldiers concealed in the woods. The "Delaware" instantly pitched a few shells into the woods from which the firing proceeded, and in a few minutes the enemy could be seen running out like rats from a burning granary. The landing then went on unimpeded. The boats were unable to get up to the bank, owing to shoal water; and the soldiers were obliged to wade ashore in the icy water, waist-deep, and sinking a foot more in the soft mud of the bottom.

The bombardment was continued for some hours after nightfall. A night bombardment is a stirring scene. The passionate and spiteful glare of the cannon-flashes; the unceasing roar of the explosions; the demoniac shriek of the shells in the air, followed by their explosion with a lightning flash, and crash like thunder; the volumes of gray smoke rising upon the dark air, — make up a wonderful and memorable sight.

In the morning the bombardment was recommenced, and the work of landing troops went on. Eight gunboats were sent to tear away the obstructions in the channel; and there beneath the guns of the enemy's fleet, and the frowning cannon of the forts, the sailors worked with axe and ketch until the barricade was broken, and the eight ships passed to the sound above the forts. In the mean time, the troops on the island began the march against the forts. There were few paths, and they groped their way through woods and undergrowth, wading through morasses, and tearing their way through tangled thickets to get at the enemy's front. The advance was slow, but steady, until the open field before the forts was reached; then a change was ordered, led by the famous Hawkins Zouaves, who rushed madly upon the fort, shouting their war cry of *Zou, zou, zou!* Like a resistless flood the attackers poured over the earthworks, and the frightened defenders fled. Before five o'clock the entire island was in the hands of the troops, and the fleet had passed the barricade. During the bombardment the vessels sustained severe injuries. An act of heroism which made the hero celebrated was that of John Davis, gunner's mate on board the "Valley City." A shell entered the magazine of that ship, and exploded, setting the wood-work on fire. An open barrel of gunpowder stood in the midst of the flames, with sparks dropping about it. At any moment an explosion might occur which would shatter the vessel to

fragments. Men shrank back, expecting every moment to be their last. With wonderful presence of mind Davis threw himself across the open end of the barrel, and with his body covered the dangerous explosive until the fire was put out.

As soon as the stars and stripes were hoisted on the flagstuffs of the forts, the Confederate fleet, which had been maintaining a desultory fire, fled up the sound, after setting fire to one schooner which had become hopelessly crippled in the battle. She blazed away far on into the night, and finally, when the flames reached her magazine, blew up with a tremendous report, seeming like a final involuntary salute paid by the defeated enemy to the prowess of the Union arms. When quiet finally settled down upon the scene, and Gen. Burnside and Commander Goldsborough counted up their gains, they found that six forts, twenty-five hundred prisoners, and forty-two great guns had fallen into the hands of the victors. The Union loss was forty killed and two hundred wounded.

The next day was Sunday. It was considered highly important that the success of the day before should be vigorously followed up; and an expedition of fourteen vessels, under Capt. Rowan, was ordered to follow the retreating Confederate fleet and destroy it. The flying squadron was chased as far as Elizabeth City on the Pasquotauk River. Here night overtook the pursuers; and they came to anchor at the mouth of the stream, effectually cutting off all hope of retreat. The Confederates in the vessels lying off the town passed an anxious night. Outnumbered two to one by the pursuing vessels, they saw no hope of a successful resistance. With a courage which in view of the facts seems to be almost foolhardy, they determined to stick to their ships, and fight to the death. The feelings of the inhabitants of the town were hardly less gloomy. So thoroughly impregnable had they considered the forts at Roanoke Island, that they had made absolutely no preparations for defence; and now they found their homes upon the eve of capture. The victorious army had not yet had an opportunity to show the merciful way in which the inhabitants of captured cities were treated throughout the war; and the good people of Elizabeth City may be excused for fearing, that, with the destruction of their fleet, they were to be delivered into the merciless hands of a lawless enemy.

Morning dawned bright and clear. With the greatest deliberation the preparations for action were made on the attacking vessels. It was

discovered, that, owing to the continuous firing during the Roanoke Island engagement, but twenty rounds of ammunition per gun were left to each vessel. It was accordingly ordered that no long-distance firing should be done; but each vessel should dash at the enemy, run him down if possible, and then board and fight it out, hand to hand. Early in the morning the fleet started up the river. The enemy's fleet was soon sighted, lying behind the guns of a small battery on Cobb's Point. When within long range, battery and vessels opened a tremendous fire with eighty-pound rifles. The approach of the squadron continued until when within three-quarters of a mile the signal was flung out from the mast of the flagship, "Dash at the enemy." Then full speed was put on, and firing commenced from bow-guns. The Confederates became totally demoralized. The battery was abandoned when the first vessel poured her broadside into it as she passed. Before the enemy's fleet was reached, many of his vessels were fired and abandoned. The United States steamship "Perry" struck the "Sea-Bird" amidships, sinking her so quickly that the crew had scarce time to escape. The crew of the "Delaware" boarded the "Fanny," sabering and shooting her defenders until they fled over the side into the water. The victory was complete and overwhelming. Three or four of the victorious vessels at once proceeded to the town, where they found the enemy in full retreat and compelling the inhabitants to set fire to their houses. This was quickly stopped, and the invaders became the protectors of the conquered people.

The power of the Confederates in this part of the country being so effectually destroyed, the navy was divided into small detachments and sent cruising up the lagoons and rivers opening into the North Carolina sounds, merely to show the people the power of the United States Government, and to urge them to cease their resistance to its authority. Three vessels were sent to Edenton. As they came abreast of the village, a company of mounted artillery precipitately fled. A detachment of marines sent ashore found a number of cannon which they destroyed, and a nearly completed schooner to which they set fire. Other small places were visited, generally without any opposition being encountered.

A somewhat larger force was sent to a small town named Winton, as it had been rumored that a force of Union men were there disputing the authority of the Confederate Government, and the navy wished to go to

their assistance. The "Delaware" and "Hudson," in advance of the squadron, came within sight of the landing and warehouses of Winton about four in the afternoon. The town itself was hidden from the view of the vessels by a high bluff. It was a clear, quiet afternoon, and all seemed peaceful. The long wharf, running out into the stream, was deserted by all save a negro woman, who, roused from her occupation of fishing, gazed inquisitively at the strange vessels. The place looked like a commercial port going to seed on account of the blockade. The two vessels proceeded on their way unmolested, ranging past the wharf, and apprehending no danger. Suddenly from the woods on the bluff a terrific fire was poured upon the vessels. The negress, having served her end as a decoy, fled hastily to shelter. The bluffs seemed to be held by two batteries of light artillery and a considerable force of armed men. Fortunately the aim of the artillery men was bad, and the vessels sustained no severe damage. Still, they were in a precarious position. The "Delaware" was too near to bring her battery to bear, and was obliged to turn slowly in the narrow channel. The "Perry," more fortunately situated, opened at once on the enemy with shrapnel. But the contest was unequal, and the two vessels were forced to retreat down the river about seven miles, there to await the remainder of the squadron.

Two days after, the flotilla began the advance up the river, shelling the town as they ascended. Once opposite the town, the troops were landed, and the Hawkins Zouaves soon had possession of the bluff and town. Knapsacks, ammunition, and muskets in considerable quantity fell into the hands of the victors; and, after burning the barracks of the enemy the squadron returned to the base of operations at Roanoke Island.

CHAPTER VI.

REDUCTION OF NEWBERN.—EXPLOITS OF LIEUT. CUSHING.—DESTRUCTION OF THE RAM "ALBEMARLE."

AFTER the destruction of the Confederate flotilla at Elizabeth City, and the affair at Winton, the Union fleet remained quietly at anchor off Roanoke Island, or made short excursions up the little rivers emptying into the sounds. Over a month passed in comparative inaction, as the ships were awaiting supplies and particularly ammunition. When finally the transports from New York arrived, and the magazines of the war-vessels were filled with shot and shell and gunpowder, they again turned their attention to the enemy. The victories already won had almost driven the Confederates from that part of North Carolina which borders on the sounds. Roanoke Island, Elizabeth City, Edenton, and Plymouth had one after the other yielded to the persuasive eloquence of the ship's cannon, and there was left to the Confederates only one fort,—Newbern, on the River Neuse. As a city Newbern is insignificant; but as a military post it was of a good deal of importance, and the Confederates had made active preparations for its defence.

It was on the 12th of March, 1862, that Commander Rowan started from Hatteras Inlet with a flotilla of thirteen vessels, and army transports bearing three thousand men. The long column steamed down the placid

waters of Pamlico Sound, and, turning into the Neuse River, anchored about fifteen miles below the city. Although the night before the battle, and within sight of the white steeples of the menaced city, all was quiet and peaceful. The banks of the broad stream were densely wooded, and from them could be heard at times the cry of the whip-poor-will, or the hoot of the night-owl. The vessels were anchored far out in the middle of the stream, so as to avoid the deadly bullets of any lurking sharp-shooters. The look-outs kept a close watch for floating torpedoes while the sailors off duty spun their yarns in the fore-castle, and bet pipes and tobacco on the result of the coming battle. The jolly tars of the Burnside expedition had hardly yet learned that war was a serious matter. They had met with but little serious resistance, had captured powerful forts without losing a man, had chased and destroyed the Confederate fleet without any serious damage to their own, and felt, accordingly, that war was a game in which it was their part always to win, and the part of the enemy to run away. Certainly the fight at Newbern did nothing to dispel this idea.

When morning broke, the shrill piping of the boatswain's whistle brought the crew to their places on deck. Breakfast was served, and leisurely eaten; for it is one of the established theories of the navy, that sailors can't fight on empty stomachs. Breakfast over, the work of landing the troops was begun. The point chosen was a broad beach fringed with woods near the anchorage of the vessels. Before landing the troops, the ships threw a few shells into the woods, to make certain that they concealed no ambushade, as in the disastrous affair at Matthias Point. After two dozen shells had burst, mowing down trees, and driving out frightened animals in plenty, but no sharp-shooters, the long-boats put off from the transports bearing the soldiers for the land attack. As soon as six or seven hundred were landed, they formed in column, and moved rapidly up the beach. The others followed as rapidly as they could be put on shore. The gunboats steamed slowly up the river, keeping abreast of the troops, and throwing shells into the woods ahead of the attacking column. Had any Confederates prepared to resist the march, they must have been driven out of the forest before the Federals came within musket-range. Not an atom of resistance was made. The plans of the invaders seemed irresistible. About half-past four in the afternoon, a puff of smoke rose from the river-bank far ahead of the leading vessel, and in a few seconds a heavy

shell plunged into the water a hundred yards ahead of the flotilla. The enemy was getting awake to the situation. The gunboats soon returned the fire, and the cannonading was continued at long range, without damage to either side, until sundown, when the troops went into camp, and the vessels chose an anchorage near by.

At daylight the next morning, the advance was resumed. The day was so foggy that the usual signals between the vessels could not be seen, and orders from the flag-ship had to be carried by boat. The fleet proceeded up the river; and, when the fog lifted, the ramparts of Fort Dixie—the one that had fired on them the night before—were visible. A vigorous bombardment was at once begun; but the fort failed to reply, and a storming-party sent ashore found it empty. Hoisting the stars and stripes above the deserted bastions, the ships went on. Soon they reached Fort Ellis. Here the firing was sharp on both sides. The fort was a powerful earth-work, well armed with rifles ranging from thirty-two to eighty pounders. The Confederates did but little damage with their guns; their aim being bad for want of practice, and their powder of poor quality. Still, they fought on with great courage until a shell from the "Delaware" burst in the magazine, firing the powder there, and hurling the fort, with large numbers of its brave defenders, high in the air. This ended the fight with Fort Ellis, and the fleet continued its way up the river.

Shortly after passing Fort Ellis, two rows of obstructions were met in the channel. The lower barrier was composed of a series of piles driven into the river-bottom, and cut off below the water; back of these came a row of pointed and iron tipped piles pointing down stream at such an angle as to be likely to pierce the hull of any vessel that should run upon them. Entwined about these piles was a cable connecting with thirty powerful torpedoes. That any vessel could pierce such a barrier seems almost incredible; yet all the vessels of the flotilla passed, and but two were seriously injured. One of the sharp iron piles drove through the bottom of the "Barney," sending the crew to the pumps, and the carpenter down into the hold with his felt-covered plugs. But her damages were quickly repaired, and she went on with the rest of the fleet. Right under the guns of Fort Thompson the second line of obstructions was encountered. It consisted of a line of sunken vessels closely massed, and a *cheval-de-frise* of stakes and logs, that blocked the entire river, save a

small passage close in shore under the guns of the battery. Here was more hard work for the sailors; but they managed to creep through, and ranging up in line, broadside to Fort Thompson, they opened a vigorous cannonade upon that work. The condition of the garrison of the fort was desperate. The troops that had marched up the beach abreast of the vessels began a vigorous attack on the landward face of the fort, while the vessels in the river kept up a vigorous fire on the water-front.

FLAG OF SOUTH CAROLINA.

Soon the gunners of the fort were called away from the river-front to meet the hot assault of the soldiers on the land; and, as the conflict grew close, the ships ceased firing, lest their shell should mow down foe and friend alike. Leaving the enemy to the attention of the soldiery, the ships proceeded up the river past two deserted forts that gave no answer to vigorous shelling. Just as the last vessel was passing Fort Thompson, the attacking troops, with a cheer, rushed upon the ramparts; and in a minute the stars and stripes were fluttering from the flagstaff. This was the last resistance encountered, and at two P.M. the victors were in full possession of the city. The war ships sped up the river after three Confederate steamers that were endeavoring to escape, and soon captured them. One was run ashore and burned, while the other two were added to the conquering fleet. As a last resort, the flying enemy sent down a huge fire-raft, in the hope of burning some of the Union vessels; but this was stopped by the piers of a railroad bridge, and, burning that, effectually cut off Newbern's communication with the world. During the entire two days' engagement, the navy did not lose a man on the ships. Two of a small landing-party were killed, and eleven wounded; while of the soldiers there were killed eighty-eight, and wounded three hundred and fifty-two. This victory gave to the United States

the entire control of the North Carolina sounds and tributary navigable waters.

For years after this, the sounds were occupied by a small squadron of the United States navy, mainly blockading cruisers. It was during these three years of occupation that Lieut. W. B. Cushing performed those wonderfully daring deeds that made him a name and fame apart from all other war-records. These feats so particularly belong to Cushing's record, rather than to the history of any years of the war, that they may well be considered together here. The wonderful exhibitions of daring by which this young officer earned his promotion to the rank of a commander, while still hardly more than a boy, were the ascent of New River Inlet in the steamer "Ellis," for the purpose of destroying the enemy's salt-works, and a blockade-runner at New Topsail Inlet; and finally, the great achievement of his life, the destruction of the ram "Albemarle" in the Roanoke River.

Lieut. Cushing entered the navy during the first year of the civil war, being himself at that time but nineteen years old. A comrade who served with him at the time of the destruction of the "Albemarle" describes him as about six feet high, very slender, with a smooth face, and dark wavy hair. Immediately upon his joining the navy, he was assigned to duty with the blockading squadron on the Atlantic coast. He distinguished himself during the first year of the war, at a time when the opportunities of the service were not very brilliant, by unfailing vigilance, and soon won for himself the honor of a command. In November, 1862, he was put in command of the steamer "Ellis," and ordered to preserve the blockade of New River Inlet on the North Carolina coast, not far from the favorite port of the blockade-runners, Wilmington. The duties of a blockading man-of-war are monotonous, at best. Lying at anchor off the mouth of the blockaded harbor, or steaming slowly up and down for days together, the crew grow discontented; and the officers are at their wits' end to devise constant occupation to dispel the turbulence which idleness always arouses among sailors. Inaction is the great enemy of discipline on board ship, and it is for this reason that the metal and trimmings aboard a man-of-war are so continually being polished. A big brass pivot-gun amidships will keep three or four jackies polishing an hour or two every day; and petty officers have been known to go around secretly, and deface some of the snowy wood-work or gleaming brass, when it seemed that surfaces to be

polished were becoming exhausted. It is no unusual thing to set a gang of sailors to work rubbing away with polish on the flukes of the great anchors, merely to give them work. But while this sort of occupation may drive dull care away from the heart of Jack, his officers are not so easily entertained; and the dull routine of blockading duty at an unfrequented port is most wearisome to adventurous spirits. Particularly was this the case with Lieut. Cushing, and he was constantly upon the look-out for some perilous adventure. One day late in November, information was brought to him that the enemy had established large salt-works at Jacksonville, thirty-five miles up the river. Even thus early in the war, the vigorous blockade was beginning to tell upon the supplies of the Confederates; and one of the articles of which the Southern armies were in the greatest need was salt. The distress caused by the lack of it was great. Many of the soldiers were in the habit of sprinkling gunpowder upon their food to give it a flavor approaching that of salt. In olden days, particularly in the British navy about the end of the eighteenth century, it was the custom for the captains to issue to their crews, before going into battle, large cups of grog with gunpowder stirred in. It was believed that this mixture made the men fight more desperately. But this theory of the doughty sea-dogs of past generations no longer finds any support, and doubtless the soldiers of the Confederacy felt they could fight better upon salt than on their enforced seasoning of gunpowder. At Manassas Junction, when the Confederate army by a rapid movement captured a large provision train, the rush of the soldiers for two or three cars laden with salt was so great that a strong guard had to be stationed to beat back pilferers, and secure a proper division of the much-prized seasoning.

The officers of the Union navy were well informed of this scarcity of salt throughout the South, and accordingly made it a point to destroy all salt-works along the coast. The officers of the Gulf squadron were constantly employed in raiding establishments of this character, of which there were numbers along the coast of Louisiana, Alabama, and Mississippi. Cushing, on hearing of the existence of salt-works in the district over which he stood guard, determined to destroy them. But to do this was a matter of no small peril. Jacksonville was thirty-five miles up a small stream, in the heart of a country teeming with Confederate troops and their guerilla sympathizers. The densely wooded shores could conceal

sharp-shooters, who could easily pick off every man stationed on the steamer's deck. At any point of the entire distance a masked battery might be stationed, that could blow the invading craft out of water, and leave none of her crew uncaptured to tell the tale. Nevertheless, the intrepid young commander determined to make the attempt. His vessel was a small steamer, mounting one heavy gun amidships and two smaller cannon on each side. Without any mishap the "Ellis" and her crew reached the town about noon. On the way up the river a dense column of black smoke appeared ahead, rising above the forest. All thought that the Confederates, hearing of their approach, had evacuated the town, firing it as they retreated. All possible steam was put on, and the little gunboat dashed up the river in the hope of saving some of the property of the inhabitants. But, on rounding an abrupt curve in the river, the mystery was solved by the appearance of a fine schooner, loaded with cotton and turpentine, and drifting helplessly, a mass of crackling flames, down the stream. She was clearly a blockade-runner, freighted with the chief products of the country, and had been waiting a chance to slip out past the blockader, and run for some friendly port. Cushing's bold move up the river had entrapped her neatly, and her owners had fired her and fled. The fire was a magnificent sight. The inflammable cargo, the tarry ropes and cordage, fed the flames, which leaped from hull to main-truck. The cotton burned sullenly, giving forth immense clouds of dense, black smoke. To save her was hopeless, and the "Ellis" kept out of the way of the flying fire-brands and continued on. The expected salt-works were not found, however; and the only trophies to be obtained at the town were about twenty-five stand of arms and two schooners, evidently blockade-runners. The post-office was also visited, and a large mail captured and removed, in the hope of finding therein some valuable information regarding the movements of the enemy. The town itself was one of the sleepy little Southern villages, with wide streets, grass-grown and lined with live-oaks. Children, and boys too young to have been drafted into the Southern army, followed the sailors and marines curiously as they strolled up and down the silent streets. The war had robbed the little city of its men; the blockade had robbed it of its little coasting-trade. Such an air of quiet and desolation hung about the place, that the inhabitants probably welcomed the advent of even the hostile sailors as being some-

thing to break the monotony. After a stoppage of an hour and a half, the "Ellis" started down the river. The quiet of the upward voyage had dispelled any thoughts of danger, but about five o'clock suspicions were re-awakened by the sight of a small encampment on the bank. A few shells thrown over the tents quickly sent the campers scurrying into the woods; and, as the camps seemed to have no artillery, the "Ellis" continued without further hostilities. A short distance down the stream the Confederates opened upon them with two guns mounted on a lofty bluff. Cushing, ever ready for a skirmish, stopped his engine, and cleared away the big pivot-gun for action. The battle-flag was hoisted at the fore, and the crew, with three cheers, set about the work. About an hour of artillery practice followed, when, the enemy being driven from his guns, the "Ellis" proceeded on her way. It was now growing dark, and the tide was rapidly falling. The two pilots on the steamer agreed that daylight and high tide were necessary to get the vessel safely out of the river. With great reluctance Cushing ordered the anchor to be let fall, and proceeded to make preparations for the night. On both banks of the river could be seen the flash of lanterns, proving that the Confederates were aware of the steamer's presence, and were contemplating an attack. To resist such an attack if made in force during the night, seemed almost hopeless; yet the sailors went cheerfully about the work of preparation, getting out cutlasses and revolvers, and putting up the boarding-nettings over the sides. In watchful anxiety the hours wore away. No sound escaped the vigilant ear of the men on duty. But the enemy evidently had abandoned the attack, and when morning broke none were to be seen. With light hearts, and feeling that the worst was past, the little party continued their way, only to find that the worst was yet to come. Soon after daylight, the pilot, mistaking the channel, ran the ship so solidly aground that there was clearly no hope of extricating her. All this time she had been towing one of the captured schooners; and Cushing, with quick decisiveness, ordered that every thing should be removed from the "Ellis" to the schooner. This was quickly done, leaving nothing but the great pivot-gun aboard.

But even when so greatly lightened, the ship would not float, and Cushing saw that all was lost. As a final expedient he sent a boat's crew back after the cannon that the enemy had abandoned the day before,

intending to construct a land-battery with them, and so keep his ship. But the Confederates had already removed the guns, so this forlorn hope failed. Orders were then given for the crew to take the schooner, and drop down the river for a mile or two. The young captain expressed his intention of remaining aboard his craft, and asked for six volunteers to help him fight the pivot-gun. They were quickly found; and, while the remainder of the crew dropped down the river in the schooner, the devoted little band calmly awaited the beginning of the attack. They did not have long to wait. Soon a cannon boomed from the bank, and a heavy shell whizzed over their heads. Then another, from another direction, and a third, and a fourth, each from a distinct battery. They were hopeless odds, yet Cushing and his command fought on until the gunners, getting the range, dropped shot after shot into the doomed vessel. Then fire broke out in three or four places. This was too much; and the seven daring men took to a small boat, and rowed to the schooner. First, however, they loaded the long gun, and turned it on the enemy, in order, as Cushing said, "that she might fight for herself when we could do so no longer." Once in the schooner, they sailed rapidly down the river; and just as they reached the sound a deep boom announced that the fire had reached the magazine, and the "Ellis" was blown into a million pieces. Daring as this adventure was, Cushing was much distressed at its termination; and in his official report he asks for a general court of inquiry, to determine whether he had properly upheld the honor of the nation's flag.

Another daring expedition was undertaken by Cushing when in command of the "Monticello." This was in February, 1864. He was cruising off Cape Fear River. At Smithville, a small town some distance up the river, was a Confederate army-post. Cushing's plan was to proceed up the river in row-boats, burn any vessels that might be at the dock, capture the commanding officers, and escape before the enemy could recover from the surprise. It was a rash and rather useless expedition, but Cushing successfully carried it out. With two boats and twenty men, he went quietly past the guns of the fort, concealed by the blackness of a cloudy night, ascended the river to the town, and landed directly in front of the hotel. A high bank concealed the party from view, and lying in ambush here they managed to capture some negroes, from whom the desired information was obtained. Then with two officers and a seaman,

Cushing walked from the deck to Gen. Herbert's headquarters in so open a manner as to disarm suspicion. Entering the house they met an engineer officer, who tried to raise an alarm, but was quickly captured and gagged. The adjutant-general, never dreaming that any enemy could be so near him, supposed it was a mutiny, and fled hastily, half dressed, to the woods, not even calling out the garrison. Cushing then with his speechless prisoner walked calmly back before the long barracks that sheltered a thousand hostile soldiers, and within a few yards of the sentry on the wharf. Only when the affrighted adjutant-general returned from his hasty trip to the woods did the Confederates know that an enemy had been in their midst. Then there was great excitement, arresting of sentries, calling out of guards, and signalling to the fort that hostile boats were in the harbor. But all too late. Cushing's coolness, courage, dash, and invincible luck had carried him scot free through another dare-devil adventure.

From the "Monticello" Cushing made yet another dangerous excursion into the enemy's country. On this occasion he had a more adequate purpose for his perilous errand. It was believed that the Confederate ram "Raleigh" was in the Cape Fear River above the town of Smithville, the scene of the last adventure. Cushing obtained permission from his superior officer to ascend the river, and try to blow up the ram with a torpedo. On the night of the 23d of June he started, taking with him Jones and Howarth, the officers who had been with him in the previous trip, and fifteen men. The night was pitchy dark, and all went well as they passed the fort and the little town of Smithville. Fifteen miles from the river's mouth, they saw the moon suddenly break through the clouds; and the surface of the river suddenly became bright, revealing to the sentries on shore the Yankee boat fifteen miles within Confederate territory. Quickly the boats turned about, and headed down the river; but this was a mere feint, as Cushing doubled as soon as he reached the shadow of the opposite bank, and continued his course into the hostile territory. Toward morning, when within about seven miles of Wilmington, a very stronghold of the Confederates, he landed, and hid his boat in a neighboring swamp. The men lay in hiding all day; and, just as they were about to start out again, they captured two boats with a Wilmington fishing-party. During the second night Cushing crept cautiously up to within three miles of Wilmington, closely examining the defences of the town and the obstructions in

the river. At daybreak he rowed up one of the creeks until he found the road between Fort Fisher and Wilmington. Here he crouched by a hedge until a mounted mail-carrier came by from the fort. The soldier was captured and dismounted, vastly astonished at the sight of a blue-jacket in that region. Presently, along came the carrier from the town, on the way to the fort. He too was astonished at the sight, but flung back a scornful answer to the demand that he surrender, and galloped hastily away. In an instant Cushing was on the back of the captured horse, and after him; but the fugitive was too well mounted, and escaped. Matters were now becoming very serious. The runaway would doubtless give the alarm everywhere. Immediate flight was imperative. The men had been away from the boat for some hours, and were famished. Food must be had. But how to get it? Cushing's solution of the problem was characteristic. Having captured some other prisoners, he learned that a store was to be found about two miles off. A prisoner about Howarth's size was ordered to strip, and Howarth put on his clothing. The change from the trim blue uniform of a Yankee naval officer to the slouchy jeans jumper and overalls of a North Carolina "cracker" was somewhat amusing, but the disguise was complete. Mounting the captured horse, Howarth rode off in the character of a "poor-white" farmer come in to do his marketing. He chatted freely with the people he met along the road, and securing his provision, returned to the boat without arousing the least suspicion. Snugly ensconced in the thick bushes, the party then proceeded to sup, and after the meal amused themselves in cutting telegraph-wires, and at dark returned to the boat. This was the third night in the river, and Cushing prepared to return. Embarking with his prisoners, he pulled up to the "Raleigh," and found that she would not need his attentions, as she was already a total wreck. Then he began the descent of the river. When a little way down the prisoners were set adrift, with neither sails nor oars in order that they might not report the occurrence too soon. The blue-jackets continued their pull down the river. Just as they reached the mouth the moon shone out, and a quick hail came from a guard-boat. Cushing made no answer, but in a low voice urged his men on, intending to attack the enemy. But in an instant more three boats came out of the shadow, and at the same instant five appeared on the other side. One opening seemed left for the beleaguered boat to dash through. At it they

went, but a schooner filled with troops suddenly appeared blockading this last exit. It looked as though all was up, and those in the boat saw before them the cheerful prospect of execution as spies. But Cushing's pluck and self-possession, which had never yet failed, still stood by him. He resorted to strategy, and, like the hunted fox, threw his pursuers off the track by doubling. He made a dash so rapid and determined towards the western bar, that all the boats of the enemy rushed to block that point. For an instant his own was in the shadow of a cloud. In that instant he had turned, and headed at full speed for New Inlet. His men were as cool as he. With a few vigorous pulls the boat shot out into the breakers where the enemy dared not follow it, and soon after the cutter was hoisted to the davits of the "Monticello," uninjured, after a stay of three nights in the heart of the enemy's country.

It was near the end of the great war that Cushing performed the greatest feat of daring of his adventurous career; and, as on the previous occasions, the scene of the exploit was in the waters tributary to the North Carolina sounds. Early in the spring of 1863 it became evident to the officers of the Union squadron in the sounds, that the Confederates were making arrangements to drive the Yankee ships from those waters, and to re-open the coasting-trade to the people of North Carolina. The chief source of alarm to the fleet was a heavy iron-clad which was reported to be building on the Roanoke River above Plymouth. Full descriptions of this vessel were in the hands of the Union officers; and they saw clearly that, should she be completed, no vessel of the sound squadron, nor perhaps the entire navy, would be able to do battle against her successfully. The river was too shallow for the war-vessels to go up to the point where the ram was being built, and the channel at Hatteras Inlet was not deep enough for iron-clads to be brought in to compete with the enemy when finished. The naval authorities repeatedly urged the army to send an expedition to burn the boat; but Major-Gen. Foster, in command of the department of North Carolina, declared it was of no importance, as the Confederates would never put it to any use. Time showed a very different state of affairs. In April, 1864, the ram was completed, and named the "Albemarle." Her first work was to co-operate with ten thousand Confederate troops in the re-capture of Plymouth, which was accomplished with very little difficulty. Lieut. Flusser was at Plymouth with four small

gunboats, and remained bravely at his post as he saw the powerful ram bearing down upon him. It was half-past three in the morning, and the chill, gray dawn was just breaking over the earth. Above the river hung a mist, through which the great body of the ram could be seen coming doggedly down to the conflict. The "Miami" and "Southfield" were lashed together; and, at the order of Commander Flusser, they started to meet the iron-clad, firing quickly and with good aim. The "Albemarle" came on silently, disdaining to fire a gun. With a crash she struck the "Miami" a glancing blow on the port-bow, gouging off two great planks. Sliding past the wounded craft, she plunged into the "Southfield," crushing completely through her side, so that she began to settle at once. The lashings between the gunboats parted, and the "Southfield" sank rapidly, carrying part of her crew with her. As the "Albemarle" crashed into the two vessels, she fired her bow-gun several times, killing and wounding many of the Union sailors, and killing Lieut. Flusser. When she turned and made a second dash for the "Miami," the latter fled down the stream, knowing that to dare the power of the enemy was mere madness. The "Albemarle" steamed back to Plymouth, and by her aid the town was easily re-captured by the Confederates.

The squadron in the sounds was now in a state of the greatest anxiety. At any moment the impregnable monster might descend the river and destroy the frail wooden gunboats at her leisure. Preparations were made for a desperate battle when the time should come. Captains were instructed to bring their ships to close quarters with the enemy and to endeavor to throw powder or shells down her smoke-stack. Every possible means by which a wooden steamer might cope with an iron-clad was provided.

On the 5th of May the ram put in an appearance, steaming down the river. Deliberately she approached within easy range, then let fly a shot at the "Mattabesett" which knocked her launch to pieces and wounded several men. The "Mattabesett" ran up to within one hundred and fifty yards of the "Albemarle," and gave her a broadside of solid shot from nine-inch Dahlgrens and one hundred-pounder rifles. When these shot struck a sloping place on the ram's armor, they glanced off. Those that struck full on the plating simply crumbled to pieces, leaving no dent to tell of the blow. One beautifully aimed shot struck the muzzle of one

of the cannon on the ram and broke it. The gun was used throughout the fight, however, as the "Albemarle" carried but two and could not spare one of them. The "Sassacus" followed in line of battle. She delivered her broadside in passing. The ram rushed madly at her, but was evaded by good steering. Then the "Sassacus" in turn rushed at the ram at full speed, thinking to run her down. She struck amidships at right angles, and with the crash of the collision came a hundred-pound shot from the ram, that passed through the wooden ship from end to end. Still the engines of the "Sassacus" were kept going, in the hope of pushing the "Albemarle" beneath the water. The iron-clad careened slowly, the water washed over her after-deck; the crew of the "Sassacus," far out on the bow, tried vainly to drop shells and packages of powder down the ram's smoking chimneys. It was a moment of intense excitement. But the ram was too much for her assailant. Recovering from the shock of the collision, she slowly swung around until her bow-gun could be brought to bear on her tormentor, when she let fly a ponderous bolt. It crashed through the side of the steamer and plunged into her boiler. In an instant hot, scalding steam filled the engine-room and spread over the whole ship. Cries of agony arose on every side. Twenty-one of the crew were terribly scalded. Nothing remained but retreat; and the "Sassacus" steamed away from her enemy, after making one of the bravest fights in naval history. In the mean time the other gunboats were pounding away at the ram. The "Miami" was trying in vain to get an opportunity to discharge a large torpedo. Two other vessels were spreading nets about the great ship, trying to foul the propeller. The action continued until dark, when the ram withdrew, uninjured and without losing a man. She had fought alone for three hours against six ships, and had seriously damaged every one of her adversaries. It must also be remembered that she carried but two guns.

The "Albemarle" lay for a long time idle at her moorings in Roanoke River, feeling sure that at her own pleasure she could go into the sounds, and complete the destruction of the fleet. Lieut. Cushing, then twenty-one years old, begged permission to attempt to destroy her. The authority was gladly granted by the navy department, and Cushing began making his plans for the adventure. His first plan was to take a squad of men, with two steam-launches, up the Roanoke, and blow the ram up by means of a

torpedo. The launches were sent from New York, but one was swamped while crossing Delaware Bay.

Cushing, however, was not the man to be balked by an accident: so, cutting down his force one-half, he prepared for the start. Thirteen officers and men made up the little party which seemed bound to certain death. The spirit which animated the blue-jackets during the war may be imagined from the fact that many sailors tried to purchase the privilege of going on this perilous expedition, by offering their month's pay to those who had been selected. To understand what a forlorn hope the little boat-load of men were cherishing, we must understand what were the defences of the "Albemarle." She lay at a broad wharf, on which was encamped a large guard of soldiers as well as her crew. Above and below her, great fires were kept burning on the shores, to prevent any boat approaching unseen. She was surrounded by a boom, or "water-fence," of floating logs, about thirty feet from her hull, to keep off any torpedo-boats. From the mouth of the Roanoke to her moorings was about eight miles; the shores being lined on either side by pickets, and a large picket-station being established in mid-stream about one mile below Plymouth.

To attempt to penetrate this network of defences seemed to be foolhardy. Yet Cushing's record for dash and courage, and his enthusiasm, inspired his comrades with confidence; and they set out feeling certain of success. On the night of the 27th of October, the daring band, in their pygmy steamer, steamed rapidly up the river. No word was spoken aboard. The machinery was oiled until it ran noiselessly; and not a light shone from the little craft, save when the furnace-door was hastily opened to fire up. The Confederate sentries on the bank saw nothing of the party; and, even when they passed the picket schooners near the wreck of the "Southfield," they were unchallenged, although they could see the schooners, and hear the voices of the men, not more than twenty yards away. Not until they came into the fitful glare of the firelight were they seen, and then quick hails came from the sentries on the wharf and the "Albemarle's" decks. But the light on the shore aided the adventurers by showing them the position of the ram. They dashed up alongside, amid a shower of bullets that seemed to fill the air. On the decks of the ram all was confusion, the alarm rattles were sprung, the bell rung violently. The launch running alongside came into contact with the row of logs, and sheered off to make

a dash over it. Cushing, who on these dangerous expeditions was like a schoolboy on a holiday, answered with ridicule all hails. "Go ashore for your lives," "Surrender yourselves, or I shall sink you," he cried, as the gunners on the ram trained a heavy gun on the little launch. Now she was headed straight for the ram, and had a run of thirty yards before striking the boom. She reached, and dashed over. Cushing, standing in the stern, held in one hand the tiller ropes, in the other the lanyard of the torpedo. He looked up, saw the muzzle of a heavy gun trained directly on his boat: one convulsive pull of the rope, and with a roar the torpedo exploded under the hull of the "Albemarle," just as a hundred-pound shot crashed through the bottom of his boat. In a second the launch had disappeared; her crew were struggling in the waves, or lying dead beneath them, and the "Albemarle" with a mortal wound was sinking to the bottom.

Cushing swam to the middle of the river, and headed down stream. Most of his companions were killed, captured, or drowned. In the middle of the stream he met Woodman, who had followed him on previous expeditions. Woodman was almost exhausted. Cushing supported him as long as he was able, but was forced to leave him, and the sailor sank to the bottom. The young lieutenant floated down the river until at last he reached the shore, exhausted and faint from a wound in his wrist. He lay half covered with water in a swamp until daylight. While there he heard two Confederate officers who passed say that the "Albemarle" was a total wreck. That news gave him new energy, and he set about getting safely away. Through the thick undergrowth of the swamp he crawled for some hours, until he found a negro who gave him shelter and food. Then he plunged again into the swamp, and walked on until he captured a skiff from a Rebel picket; and with this he safely reached the fleet,—the only one of the thirteen who set out two days before. So ended the most wonderful adventure of the war

CHAPTER VII.

THE BLOCKADE-RUNNERS.—NASSAU AND WILMINGTON.—WORK OF THE CRUISERS.

WHILE it is undeniably true that the naval battles of the civil war were in many cases unimportant as compared with the gigantic operations of the mighty armies in Virginia and Tennessee, yet there was one service performed by the navy, alone and unaided, which probably, more than any thing else, led to the final subjugation of the South. This was the blockade.

To fully appreciate what a terrible weapon the blockade is when energetically pursued, one need only look at the condition of the South during the latter years of the war. Medicines were almost unattainable for love or money. Salt was more carefully hoarded than silver. Woollen goods for clothing were not to be had. Nothing that could not be produced by the people of the revolted States could be obtained at their markets. Their whole territory was in a state of siege, surrounded by a barrier only a little less unrelenting than the iron circle the Germans drew around besieged Paris.

Almost the first war measure of Abraham Lincoln was to declare the ports of the Confederacy in a state of blockade. At first this seemed a rash proclamation, and one which could not be sustained by the force at the command of the Federals. It is a rule of warfare, that "blockades,

to be binding, must be effective;" that is, it is not lawful for a nation with a small fleet to declare an enemy's coast in a state of blockade, and then capture such trading vessels as may happen to run in the way of its cruisers. The nation must have a large enough fleet to station vessels before each of the principal harbors of the enemy, and to maintain a constant and vigilant patrol up and down his coast. If this cannot be done, the blockade is called a "paper blockade," and merchantmen are justified in attempting to evade it. An instance of a "paper blockade" occurred during the early months of the civil war, which will illustrate this point. Wilmington, N.C., was throughout the war one of the favorite ports for blockade-runners. From its situation, the many entrances to its harbor, and other natural advantages, it was the most difficult of all the Southern ports to keep guarded. With the rest of the Confederate ports, Wilmington was declared blockaded; but it was long after, before a suitable blockading-fleet was stationed there. In July, 1861, the British brig "Herald" left Wilmington without molestation. When two days out, she ran across a United States man-of-war, that promptly captured her. The courts, however, decided that a port so little guarded as Wilmington was at that time could not be legally called blockaded, and the brig was therefore released.

But it did not take many months for the energetic men of the Navy Department to get together such a fleet of boats of all kinds as to enable them to effectually seal all the ports of the Confederacy. A blockading vessel need not be of great strength or powerful armament. All that is necessary is that she should be swift, and carry a gun heavy enough to overawe any merchantman that might attempt to run the blockade. And as such vessels were easy to improvise out of tug-boats, ferry-boats, yachts, and other small craft, it came about that by the last of 1861, the people of the seaport towns of the South, looking seaward from their deserted wharves, could see two or three Federal cruisers lying anchored off the outer bar, just out of reach of the guns of shore-batteries. It was a service of no little danger for the blue-jackets. The enemy were ever on the alert to break the blockade by destroying the ships with torpedoes. Iron-clad rams were built on the banks of the rivers, and sent down to sink and destroy the vessels whose watchfulness meant starvation to the Confederacy. The "Albemarle" and the "Merrimac" were notable instances of this

course of attack. But the greatest danger which the sailors had to encounter was the peril of being wrecked by the furious storms which continually ravage the Atlantic coast. The sailor loves the open sea in a blow; but until the civil war, no captain had ever dared to lie tugging at his cables within a mile or two of a lee shore, with a stiff north-easter lashing the sea into fury. In the blockading service of our great naval war, the war of 1812, the method in vogue was to keep a few vessels cruising up and down the coast; and, when it came on to blow, these ships would put out into the open sea and scud for some other point. But in '61 we had hundreds of vessels stationed along the enemy's coast; and where a ship was stationed, there she stayed, to meet the fury of the wind and waves by putting out more anchors, and riding out at her cables storms that would have blown the blockader of 1812 hundreds of miles from her post.

In the earlier years of the war the blockade-runners were nearly all sailing-vessels, schooners, and brigs, that were easily captured. But when the supplies of the South became exhausted, and the merchants of England began building ships especially for this purpose, the duty of the blockading squadron became exciting and often very profitable. The business assumed such proportions that half the ship-yards in England were engaged in turning out fast steamers to engage in it. At first it was the custom to send goods in regular ocean-steamers from England to the blockaded port; but this was soon abandoned, as the risk of capture on the long run across the Atlantic was too great. Not until the plan was adopted of shipping the goods to some neutral port along our coast, and there transferring the cargo to some small, swift vessel, and making the run into the Confederate port in a few hours, did the business of blockade-running become very extensive. Goods shipped for a neutral point were in no danger of being captured by our cruisers, and therefore the danger of the long trans-Atlantic passage was done away with.

Of these neutral points which served as way-stations for the blockade-runners, there were four on or near our coast,—the Bermuda Islands, which lie about seven hundred miles east of Charleston; Nassau, which is off the coast of Florida, and a little more than five hundred miles south-east of Charleston; Havana; and the little Mexican town of Matamoras on the Rio Grande, opposite Brownsville, Texas. The Bermudas were to

some extent used, but their distance from the coast made them inconvenient as compared with Nassau or Matamoras. Their chief trade was with Wilmington, which became a favorite port during the latter years of the war. Havana was popular for a time, and at first sight would appear to be admirably placed for a blockade-runners' rendezvous. But, though the coast of Florida was but one hundred miles distant, it was

NASSAU: THE HAUNT OF THE BLOCKADE-RUNNERS.

surrounded by dangerous reefs, its harbors were bad and far apart, and there were no railroads in the southern part of the State to transport the contraband goods after they were landed. Besides, Key West, the naval station of the Union forces in the South, was unpleasantly near, and the gulf blockade was maintained with more rigor than that on the Atlantic coast. Matamoras was peculiarly well situated for a blockade-running point.

It is on the Mexican side of the Rio Grande River, about forty miles above its mouth. Goods once landed could be shipped in barges and lighters across the river in absolute safety, since heavy batteries prevented the cruisers of the gulf-squadron from entering the river. As a result of this trade, Matamoras became a thriving place. Hundreds of vessels lay in its harbor, where now it is unusual to see five at a time. For four years its streets were crowded with heavy freight vans, while stores and hotels reaped a rich harvest from the sailors of the vessels engaged in the contraband traffic. Now it is as quiet and sleepy a little town as can be found in all the drowsy land of Mexico.

But the true paradise of the blockade-runners was Nassau, the chief port of the Bahama Islands, and a colony of Great Britain. Here all the conditions necessary to successfully evade the blockade were to be found. The flag that waved over the island was that of a nation powerful enough to protect its citizens, and to enforce the laws relative to neutrality. Furthermore, Great Britain was undoubtedly in sympathy with the Confederates; and so far from prohibiting the efforts of her citizens to keep up trade with the blockaded ports, she encouraged and aided them in every way in her power. And aside from her mere sympathy with the struggles of the young Confederacy, England had a most powerful incentive to break down the blockade. In Manchester the huge cotton-mills, employing thousands of hands, were shut down for lack of cotton, and the mill-hands were starving for lack of work; while shut up in the blockaded ports of the South were tons upon tons of the fleecy staple, that, once in England, would be worth its weight in gold. It was small wonder that the merchants of England set to work deliberately to fit out blockade-runners, that they might again get their mills running, and their people fed.

The years of the war were lively times for the little town of Nassau. Hardly had the proclamation of President Lincoln announcing the blockade of all Confederate ports been issued, when at a bound Nassau became prominent as the point of all most suitable for a blockade-runners' rendezvous. Its harbor and the surrounding waters were deep enough for merchant-vessels, but too shallow to allow much cruising about by warships of heavy armament. It was within a few hours' running of three Confederate ports, and it was protected by the flag of Great Britain. Early in the war the Confederates established a consulate in the little town, and

the Stars and Stripes and the Stars and Bars waved within a few rods of each other. Then great shipping-houses of Liverpool sent over agents, and established branch houses. Great warehouses and wharves were built. Soon great ocean ships and steamers began unloading their cargoes at

COTTON SHIPS AT NASSAU.

these wharves. Then swift, rakish schooners began to drop into the harbor, and after discharging heavy loads of cotton would take on cargoes of English goods, and slip out at nightfall to begin the stealthy dash past the watching gunboats. As the war went on, and the profits of the trade

increased with its dangers, a new style of craft began to appear in the little harbor. These were the Clyde built blockade-runners, on which the workmen of the Clyde ship-yards had been laboring day and night to get them ready before the war should end. They were long, low, piratical looking craft, with two smoke-stacks raking aft, and with one or two masts for showing signals, for they never hoisted a sail. Two huge paddle-boxes towered above the deck amidships, the wheels being of enormous size. No structure of any kind encumbered the deck. Even the steersman stood unsheltered at a wheel in the bow. They were painted dark gray, and at night could slip unseen along the water within a stone's-throw of the most watchful lookout on a man-of-war. They burned great quantities of a kind of coal that gave out no smoke, and when steaming at night not a light was allowed on board. Many of these strange craft can be seen now along the levees at New Orleans, or at the wharves in Mobile, where they are used as excursion-steamers or for tug-boats. They were always the merest shells, fitted only for carrying freight, as not many passengers were to be found who desired to be taken into the Confederate territory. Occasionally, however, some soldier of fortune from abroad would drift from Nassau, and thence to the mainland, to join the armies of the Confederacy. The Confederate agents on the island were always on the lookout for such adventurers, and were ever ready to aid them. Sometimes, too, returning agents of the Confederacy from Europe would make the run through the blockading-fleet; so that the blockade-runners were seldom without two or three passengers, poor though their accommodations might be. For the voyage from Nassau to Wilmington, three hundred dollars passage money was charged, or more than fifty cents a mile. To guard against treachery, passage could only be obtained through the Confederate consul, who carefully investigated the proofs of each applicant's identity before issuing to him a ticket.

When the blockade-runner had taken her cargo and passengers aboard, and was prepared for her voyage, every one in the little town came down to the docks to see her start. It was a populace strongly Southern in feeling that filled the streets of Nassau, and nothing but good wishes were to be heard on every side. Perhaps from a house on the hill-side, over which floated the Stars and Stripes, the United States consul might be watching through a spyglass the movements of the steamer, and wishing

MARINES SALUTING ON THE "LANCASTER"—OUR OLDEST NAVAL VESSEL IN ACTIVE SERVICE

in his heart that she might fall in with some Yankee cruiser; but nevertheless, under his very eyes, the audacious racer slips out, and starts on her stealthy voyage. On leaving the harbor, a quick run of fifteen or twenty miles would be taken along the coast, to try the machinery. Great care would be taken to keep within British waters, lest some watchful gun boat should seize the prize thus early in her career. When every thing proved in good working trim, the little vessel's prow would be turned northward, and the perilous voyage begun. For the first day, little danger was to be expected, and the voyage was generally so timed that the outer line of blockaders would be reached just after nightfall. A soldier going to enlist in one of the Confederate cavalry regiments thus tells the story of his evasion of the blockade.

"After a favorable voyage we reached the desired point off Wilmington at the proper time. A brief stoppage was made, when soon the final preparations were completed for running the gauntlet of the Federal blockaders, who would become visible shortly, as we approached nearer shore. All the lights in the steamer were extinguished, and all passengers ordered below, only the officers and crew being permitted to remain on deck. The furnaces were replenished with carefully selected coal, which would give the greatest amount of heat and the least smoke. The last orders were given, and every man was at his appointed place. Presently the boilers hissed, and the paddle-wheels began to revolve faster and faster, as the fleet little steamer rose higher and higher in the water from the immense force of the rapid strokes; she actually felt like a horse gathering himself up under you for a great leap. After a little while, the few faint sounds from the deck which we could hitherto faintly catch in the cabin ceased altogether, and there was the stillness of death except for the sounds necessarily made by the movements of the machinery. Then we realized that we were running for our lives past the line of cruisers, and that at any moment a big shell might come crashing through our cabin, disagreeably lighting up the darkness in which we were sitting. Our suspense was prolonged for some minutes longer, when the speed was slackened, and finally we stopped altogether. Even then we did not know whether we were safely through the lines, or whether we had been brought to under the guns of a hostile ship, for we could distinguish nothing whatever through the portholes. However, we were soon released from the

cabin, and walked on deck, to find ourselves safely through the blockade. In the offing could be descried several of the now harmless blockaders, and near at hand lay the coast of North Carolina. Soon the gray dawn was succeeded by a brilliant, lovely sunrise, which lighted up cheerfully the low-lying shores and earthworks bristling with artillery, while from a fort near by floated the Southern Cross, the symbol of the glorious cause for which we had come to fight."

When the blockade-runner, after safely running the gauntlet of the war-ships, steamed leisurely up to the wharves of the blockaded town, every one rushed to the docks to greet her. Her captain and crew became at once people of great importance. They were beset on every side for news of the great world outside. The papers that they brought in were bought eagerly by the people, hungering for tidings of something else than the interminable war. The sailors of the steamer, on being paid off, rambled about the streets of the city, spending their money royally, and followed by a train of admiring hangers-on. The earnings of the sailors in case of a successful voyage were immense. A thousand dollars for the four or five days' trip was nothing unusual for common seamen, while the captain often received eight or nine thousand. But the risk of capture, with the confiscation of all property, and some months' imprisonment in a Federal fortress, rather marred the attractiveness of the nefarious trade. The profits of a successful voyage to the owner of the ship and cargo were enormous. One of the steamers, specially built for the trade, at large cost, has been known to pay for herself fully in one voyage. Indeed, the profits must have been huge to induce merchants to take the risk of absolutely losing a ship and cargo worth half a million of dollars. It is certain, too, that throughout the war the number of vessels captured, while trying to run the blockade, was far in excess of those that succeeded. Up to the end of 1863 the Federal Secretary of the Navy reported 1,045 vessels captured, classified as follows: schooners, 547; steamers, 179; sloops, 117; brigs, 30; barks, 26; ships, 15; yachts and boats, 117. Of course, most of these were small, coastwise vessels. Even among the steamers captured, there were but few of the fleet-going, English-built craft.

There was no small amount of smuggling carried on between the ports of the North and the blockaded ports. The patriotism of the Northern merchant was not always so great as to prevent his embarking in the

traffic which he saw enriching his English competitor. Many of the schooners captured started from Northern ports and worked their way along the coast until that chain of inlets, sounds, and bayous was reached, which borders the coast south of Chesapeake Bay. Once inside the bar, the smuggler could run at his leisure for any of the little towns that stood on the banks of the rivers of Virginia and North Carolina. The chase of one of these little vessels was a dreary duty to the officers of the blockading-ships. The fugitives were fast clippers of the models that made Maine ship-builders famous, until the inauguration of steam-navigation made a gracefully modelled hull immaterial as compared with powerful machinery. Even when the great, lumbering war-ship had overhauled the flying schooner so as to bring a gun to bear on her, the little boat might suddenly dash into some inlet or up a river, where the man-of-war, with her heavy draught, could not hope to follow. And if captured, the prize was worth but little, and the prize-money, that cheers the sailors' hearts, was but small. But the chase and capture of one of the swift Clyde-built steamers was a different matter. Perhaps a lookout in the maintop of a cruiser, steaming idly about the Atlantic, between Nassau and Wilmington, would spy, far off on the horizon, a black speck, moving swiftly along the ocean. No curling smoke would tell of the blockade-runner's presence, and nothing could be seen until the hull of the steamer itself was perceptible. With the quick hail of the lookout, the man-of-war would head for the prize, and start in hot pursuit. Certain it is that the smuggler started to fly before the watchful lookout on the cruiser caught sight of her. The towering masts and capacious funnels of the man-of-war, with the cloud of black smoke from her furnaces, made her a conspicuous object at distances from which the smuggler would be invisible. With the blockade-runners the rule was to avoid any sail, no matter how innocent it might seem; and the appearance of a cloud of smoke on the horizon was the signal for an immediate change of course, and a flight for safety. When the chase began in this way, the cruiser had but little chance of making a capture, for the superior speed of the merchant-vessel would quickly carry her out of sight. Sometimes, however, a favorable wind would enable the pursuer to use her sails, and then the chase would become exciting. With a cloud of canvas set, the man-of-war would gradually overhaul the flying vessel; and when within range, the great bow-gun would

be cleared, and with a roar a shell would be sent flying after the prize. All hands would watch its course anxiously. Generally it fell short. Then another and another messenger would be sent to the enemy, which seldom struck the mark, for gunnery on a rough sea is a difficult art. But the blockade-runner can't stand being used for target-practice long. The cool head of her captain begins to deliberate upon means of getting out of range. Mere running before the wind won't do it: so he makes a long detour, and doubles on his course, heading directly into the teeth of the breeze. Now the cruiser is at a disadvantage. Her sail-power gone, she stands no chance of capturing her game. Her shells begin to fall far short of the smuggler, and soon she ceases firing altogether; and the blockade-runner, driven hundreds of miles out of her course, but safe for the time, goes on her way rejoicing.

One of the most brilliant captures of the war was that of the blockade-runner "Young Republic," by the United States gunboat "Grand Gulf." The "Young Republic" succeeded in evading the watchfulness of the blockading-squadron about the mouth of the Cape Fear River, and under cover of the night ran in safely to the anchorage under the guns of the Confederate forts. The baffled blockaders saw her moving slowly up the river, while the cannon of the forts on either side thundered out salutes to the daring vessel that brought precious supplies to the Confederacy. But the blockading-squadron, though defeated for the time, determined to wait and catch her when she came out. Accordingly the "Grand Gulf," one of the fastest of the United States vessels, was stationed at the mouth of the river, with orders to watch for the "Young Republic." A week passed, and there was no sign of her. At last, one bright day, the lookout in the tops saw the mast and funnel of a steamer moving along above the forest which lined the river's bank. Soon the hull of the vessel came into view; and with a rattle of hawse-chains, her anchors were let fall, and she swung to beneath the protecting guns of the fort. It was clear that she was going to wait there until a dark or foggy night gave her a good chance to slip past the gunboat that watched the river's mouth as a cat watches the mouth of a mouse-hole. With their marine glasses the officers on the gunboat could see the decks of the "Young Republic" piled high with brown bales of cotton, worth immense sums of money. They thought of the huge value of the prize, and the grand distribution of prize-money, and

determined to use every effort to make a capture. Strategy was determined upon, and it was decided to give the blockade-runner the chance to get out of the river that she was awaiting. Accordingly the gunboat steamed away up the coast a few miles, leaving the mouth of the river clear. When hidden by a projecting headland, she stopped and waited for the blockade-runner to come out. The stokers were kept hard at work making the great fires roar, until the steam-gauge showed the highest pressure the boilers could bear. The sailors got out additional sails, clewed up cordage and rigging, and put the ship in order for a fast run. When enough time had elapsed, she steamed out to see if the "Young Republic" had taken the bait. Officers and crew crowded forward to catch the first sight around the headland. The great man-of-war sped through the water. The headland was rounded, and a cheer went up from the crowd of jackies; for there, in the offing, was the blockade-runner, gliding through the water like a dolphin, and steaming for dear life to Nassau. Then the chase began in earnest. The "Young Republic" was one of those long, sharp steamers built on the Clyde expressly for running the blockade. Her crew knew that a long holiday in port, with plenty of money, would follow a successful cruise; and they worked untiringly to keep up the fires, and set every sail so that it would draw. On the cruiser the jackies saw visions of a prize worth a million and a half of dollars; and the thought of so much prize-money to spend, or to send home, spurred them on. For several hours the chase seemed likely to be a long, stern one; but then the freshening wind filled the sails of the gunboat, and she began to overhaul the fugitive. When within a mile or two, she began firing great shells with her pivot-gun. Then the flying blockade-runner began to show signs of fear; and with a good glass the crew could be seen throwing over bale after bale of the precious cotton, to lighten the vessel. In the last thirty miles of the chase the sea was fairly covered with cotton-bales. More than three hundred were passed floating in the water; and the jackies gnashed their teeth, and growled gruffly, at the sight of so much wealth slipping through their fingers. On the high paddle-wheel box of the blockade-runner, the captain could be seen coolly directing his crew, and now and again turning to take a look through his glass at the pursuer. As the chase continued, the certainty of capture became more and more evident. Then the fugitives began throwing overboard or destroying every thing of value: furniture,

silver-ware, chronometers, the fittings of the cabin, every thing that could benefit their captors, the chagrined blockade-runners destroyed. The officers of the gunboat saw that if they wished to gain any thing by their capture, they must make haste. At the risk of an explosion, more steam was crowded on; and the gunboat was soon alongside the "Young Republic," and in a position to give her an enormous broadside. The blockade-runner saw that he was caught and must submit. For lack of a white flag, a pillow-case was run up to the masthead, and the beating of the great wheels stopped. The davits amidships of the "Grand Gulf" are swung out, and a boat's crew, with a lieutenant and dapper midshipman, climb in. A quick order, "Let fall there," and the boat drops into the water, and is headed for the prize. Another moment, and the stars and stripes supplant the pillow-case waving from the masthead of the "Young Republic." An officer who went into the boiler-room found that the captured crew had planned to blow up the vessel by tying down the safety-valve, so that an enormous pressure of steam strained the boilers almost to bursting. A quick blow of a hatchet, and that danger was done away with. Then, with a prize-crew on board, the "Young Republic" started on her voyage to New York; while the "Grand Gulf" returned to Wilmington to hunt for fresh game.

A curious capture was that of the British schooner "Francis," which was running between Nassau and the coast of Florida. On her last trip she was nearing the coast, when she fell in with a fishing-smack, and was warned that a Federal gunboat was not far away. Still she kept on her course until sundown, when the breeze went down, and she lay becalmed. The gunboat had been steaming into inlets and lagoons all day, and had not sighted the schooner. When night came on, she steamed out into the open sea, within a quarter of a mile of the blockade-runner, and, putting out all lights, lay to for the night. Those on the schooner could see the gunboat, but the lookout on the cruiser did not see the blockade-runner. Soon a heavy fog came up, and entirely hid the vessels from each other. The blockade-runners could only hope that a breeze might spring up, and enable them to escape. But now a curious thing occurred. It almost seems as if two vessels on the ocean exercise a magnetic attraction for each other, so often do collisions occur where there seems room for all the navies of the world to pass in review. So it was this night. The anxious

men on the schooner soon found that the two vessels were drifting together, and they were absolutely powerless to prevent it. At midnight, though they could see nothing, they could hear the men on the gunboat talking. Two hours after, the schooner nestled gently up by the side of the gunboat; and a slight jar gave its crew their first intimation that a prize was there, simply waiting to be taken. All they had to do was to climb over the railing. This was promptly done, and the disgusted blockade-runners were sent below as prisoners. Half an hour later came a breeze that would have carried them safely to port.

The gray sea-fogs played many scurvy tricks with the blockading-fleets, often letting the runners in right under the muzzles of the great guns. It was far easier to spy out a vessel in the darkest night than in the thick gray fog that enveloped all objects like a blanket. One of the strangest of all the pranks played by the fog occurred in December, 1863, in Charleston Harbor. A wary blockade-runner was creeping out of the harbor, within easy range of the great guns of the fleet, and all hands were trembling, lest at any minute should come the flash of a gun, and shriek of a shell, bearing a peremptory command to heave to. Suddenly the flash came, and was followed by the bang! bang! of great guns from all quarters of the fleet. But the fire seemed pointed in another direction; and the runner made the best of her way out to sea, thinking that some less fortunate vessel, trying to come in on the other side of the fleet, had been captured or blown out of the water. It turned out that a small fog-bank had taken the form of a gray steamer moving swiftly over the water, and had been fiercely cannonaded by the whole Federal fleet. This occurrence gave the Confederates an idea; and they began sending out dummies to engage the fleet, while the true blockade-runners would slip out unobserved in the excitement. One night as the tide was running out with great force, an old hulk was cut adrift from a wharf, and drifted down rapidly upon the Federal fleet. It was just after the exploits of the "Merrimac" had made Confederate rams famous, and the naval officers were a little nervous. The hulk drifted quite into the midst of the fleet before being observed, and when she was hailed she bore down on the largest of the men-of-war, as though she were a powerful ram, steered by a commander of desperate bravery. The great gunboat's deck rang with the *Lo's'n's* whistle, as the crew were piped to repel boarders, and to their quarters at the guns. A

fierce fire was poured on the hostile craft, that came on sullenly, as if scorning to make reply. One by one the other vessels of the fleet drew near, and concentrated their fire on the wretched lumber schooner. It was too much for her; and she gave up the unequal combat, and sank to the bottom. For days after, the gallant tars of the squadron blockading Charleston rejoiced in the destruction of a "Rebel ram;" but none of them knew, that, while they were engaged in the desperate contest, two great blockade-runners, heavily laden with cotton, had slipped out of the harbor, and were well under way for Nassau.

Stories of adventure and of desperate pluck and dash abound in the records of the blockade. Both among the officers of the blockading-fleets, and the commanders of the runners, were found great courage and fine seamanship. One fact is particularly noticeable to the student of the blockade: an English captain running the blockade would never dare the dangers that a Confederate would brave without a tremor. A Confederate captain would rush his ship through the hostile fleet, and stick to her until she sunk; while an Englishman would run his ship ashore, and take to the woods. The cases of the "Hattie," commanded by H. S. Lebby, a Confederate, and the "Princess Royal," a fine, staunch, iron steamer, with an English commander and crew, are typical. The "Hattie" was the last runner to enter or leave Charleston Harbor. She was a small, swift steamer; but she made more successful trips than any other runner. Men living in Charleston to-day, who were interested in the work of this little vessel during the war, say that her cargoes were worth at least fifty millions of dollars. She had numerous narrow escapes, but was never captured. Her reputation was such that the Confederate authorities selected her as the vessel to bring in army supplies and ammunition, and at least three battles were fought with ammunition brought in her hold. Her last entrance to Charleston was one night in February, 1865. Eighteen Federal vessels lay anchored off the harbor, and for a runner to venture in seemed madness. But the captain of the "Hattie" was used to taking desperate chances, and he proposed to enter that harbor. The ship had been freshly painted a blue-white, and as she drifted along the water, with all lights out, looked like a bank of mist. She was within two hundred yards of the outer row of blockaders before her presence was detected. Suddenly fire was opened on her from the nearest gunboat, and

in an instant the air was full of rockets announcing her presence. The little vessel had no means of retaliation: all there was for her to do was to dash through the fire and make for the city. Steam was crowded on; and she flew up the channel, running the gauntlet of the fleet, and escaping almost untouched. Then came the real peril. Just below Fort Sumter were two barges anchored in the channel, and filled with armed men. Past these she dashed, her great speed saving her from boarding; but she received the fire of both boats, which wounded several of her crew, and cut off the fingers of the pilot's hand resting on the wheel. This danger past, there was one more to be met. A large monitor lay anchored up the harbor, and the "Hattie" was running so close to her that the commands of the officers in the turret could be clearly heard. One after the other the two great guns were fired, both shots missing; and the "Hattie," safely past the gauntlet, sailed up to the dock in triumph. But by that time it was clear that the last days of the war were near at hand, and accordingly the work of unloading and reloading the vessel for her outward trip was pressed with the greatest vigor. All the time she lay at her dock, Charleston was being vigorously bombarded by the Federal men-of-war lying outside the harbor. The bay fairly swarmed with blockading cruisers; yet a week later the little steamer slipped out through a fleet of twenty-six cruisers without being hailed, and carried her cotton safely to market. When the news of Lee's surrender was received, she was lying safe at her dock in Nassau.

The "Princess Royal," to which we have alluded, was a large iron screw steamer, freighted with drugs, army supplies, guns, and two engines and boilers for two iron-clads in Charleston Harbor,—a most valuable and important cargo for the Confederates. She made the run from Nassau to a point near the coast without adventure, and in the early gray of the morning was stealing up the coast towards the harbor, when a blockader caught sight of her, and started in pursuit. The later began firing when a mile and a half away; and, though there was hardly a chance of the shots taking effect, the cannonade gave the captain of the runner the cold shakes. His boat was one of the fastest on the ocean, and he needed only to put on steam to escape all the blockaders on the coast. But he was a thorough-paced coward; and, thinking only of his own safety, he headed the craft for the beach, and with his crew fled into the woods. The valuable ship and her cargo fell into the hands of the Federals.

Sometimes runners were captured through apparently the most trivial accidents. One ship, heavily laden with army supplies, and carrying a large number of passengers, was running through the blockading-fleet, and seemed sure of escape. All lights were out, the passengers were in the cabin, not a word was to be heard on deck, even the commands of the officers being delivered in whispers. Suddenly a prolonged cock-crow rent the air, and, with the silence of every thing surrounding, sounded like a clarion peal from a trumpet. The deck-hands rushed for a box of poultry on the deck, and dragged out bird after bird, wringing their necks. The true offender was almost the last to be caught, and avenged the deaths of his brothers by crowing vigorously all the time. The noise was enough to alarm the blockaders; and in a moment the hail, "Surrender, or we'll blow you out of water!" brought the unlucky runner to a standstill,—a prisoner. The "Southern Cross" narrowly escaped capture on account of the stupidity of an Irish deck-hand, whose craving for tobacco proved too strong for his discretion. The ship was steaming slyly by two cruisers, and in the darkness would have escaped unseen, when the deck-hand, who had been without a smoke as long as he could stand it, lit a match and puffed away at his pipe. The tiny flame was enough for the cruisers, and they began a spirited cannonade. The "Southern Cross" ran for her life. The shooting was guess-work, but the gunners on the cruisers showed all the proverbial Yankee skill at guessing. The first ball carried away the roof of the pilot-house, and the second ripped away the railing along the deck for thirty feet. But the captain was plucky, and made a run for it. He was forced to pass within a hundred feet of one of the cruisers; and as he saw the muzzles of the great guns bearing on his ship, he heard the command, "Heave to, or I'll sink you." But he took his chances, and escaped with only the damage caused by a solid shot crashing through the hull.

One of the strangest experiences of all was that of the captain of a blockade-runner putting in to Wilmington one bitter cold night, when the snow was blowing in clouds, and the fingers of the men at the wheel and the sailors on watch were frostbitten. The runner had reached the harbor safely; but there in channel lay a blockader in such a position that any ship coming in must pass within a hundred feet of her. The Confederate had a light-draught vessel, and tried to squeeze through.

When he passed the gunboat, only twelve feet of space separated the two vessels; and he saw a lookout, with his arms on the rail, looking right at the passing vessel. The Confederate expected an immediate alarm, but it did not come. Wondering at the cause, but happy in his luck, he sped on, and gained the harbor safely. Some days after, he learned that the lookout was a dead man, frozen at his post of duty.

It will readily be understood that the inducements offered to blockade-runners must have been immense to persuade men to run such risks. The officers and sailors made money easily, and spent it royally when they reached Nassau. "I never expect to see such flush times again in my life," said a blockade-running captain, speaking of Nassau. "Money was as plentiful as dirt. I have seen a man toss up a twenty-dollar gold piece on 'heads or tails,' and it would be followed by a score of the yellow boys in five seconds. There were times when the bank-vaults could not hold all the gold, and the coins were dumped down by the bushel, and guarded by soldiers. Men wagered, gambled, drank, and seemed crazy to get rid of their money. I once saw two captains bet five hundred dollars each on the length of a certain porch. Again I saw a wager of eight hundred dollars a side as to how many would be at the dinner-table of a certain hotel. The Confederates were paying the English big prices for goods, but multiplying the figures by five, seven, and ten as soon as the goods were landed in Charleston. Ten dollars invested in quinine in Nassau would bring from four hundred to six hundred dollars in Charleston. A pair of four-dollar boots would bring from fourteen to sixteen dollars; a two-dollar hat would bring eight dollars, and so on through all the list of goods brought in. Every successful captain might have made a fortune in a year; but it is not believed that five out of the whole number had a thousand dollars on hand when the war closed. It was come easy, go easy."

CHAPTER VIII.

DUPONT'S EXPEDITION TO HILTON HEAD AND PORT ROYAL. — THE FIERY CIRCLE.

THE great joint naval and military expedition, which in August, 1861, had reduced the forts at Hatteras Inlet, and, continuing its progress, had, by successive victories, brought Roanoke Island, Newbern, Elizabeth City, and the Sounds of Pamlico and Albemarle under the sway of the Federal Government, was but the first of a series of expeditions intended to drive the Confederates from the Atlantic seaboard, and secure for the United States vessels safe harbors and coaling stations in the bays and inlets along the South Atlantic coast. The proper maintenance of the blockade made it necessary that the seaboard should be in the hands of the Federals. For a blockader off Charleston or Wilmington to be forced to return to Hampton Roads to coal or to make repairs, would entail the loss of weeks, perhaps months, of valuable time. Besides, the sounds and inlets with which that irregular coast is honey-combed were of great use to the Confederates, who could construct at their leisure great rams like the "Merrimac" or "Albemarle," and hurl them against the fleet with the hope of breaking the blockade. Such opportunities were eagerly seized by the Confederates whenever offered; and in many cases the defeating of their purposes seems almost providen-

tial, so great was the seeming disparity between the attacking ram and the forces which finally repulsed it.

In reviewing the part of the navy in the civil war, we find that it acted like a great iron band, ever drawing closer and closer about the Confederacy, forcing the Southern armies from one point after another, until at last the whole coast was in the hands of the Unionists, and the Confederates were driven into the interior, there to be dealt with by the Northern armies. One is reminded of that iron chamber in Poe's story, which day by day grows smaller and smaller, until the wretched prisoner within is forced into the pit yawning in the centre. So, during the war, the Confederates lost Hatteras Inlet, Roanoke Island, Hilton Head, Fernandina, Mobile, New Orleans, and Galveston comparatively early in the struggle. Wilmington, behind the almost impregnable bastions of Fort Fisher, and Charleston, surrounded by a cordon of defensive forts, remained the last strongholds of the Confederacy on the Atlantic coast, until the final downfall of the great uprising.

Shortly after the capture of the Hatteras Forts, the navy department saw the need of a harbor and base of naval operations farther south. Charleston, with its powerful defences, was deemed impregnable at that time; and elaborate descriptions of the Southern coast were prepared, setting forth the advantages and disadvantages of available Southern ports. Fernandina, Brunswick, Port Royal, and Bull's Bay, were duly considered; and, while the Navy Department was debating which point to seize, Admiral Dupont was diligently fitting out an expedition to be in readiness to attack any that should be determined upon. Up to the last moment it was thought that Fernandina would be selected. But finally, with the advice of Gen. Sherman, it was determined to make the attempt to wrest Port Royal from the Confederates.

Port Royal is the general name given to a broad body of water formed by the confluence of the Broad and Beaufort Rivers, and opening into the Atlantic Ocean on the South Carolina coast, about midway between Charleston and Savannah. No more beautiful region is to be found in the world. Far enough south to escape the rigors of the northern winters, and far enough north to be free from the enervating heat of the tropics; honeycombed by broad, salt-water lagoons, giving moisture and mildness to the air, — the country about Port Royal is like a great garden; and even

to-day, ravaged though it was by the storms of war, it shows many traces of its former beauty. It is in this region that are found the famous Sea Islands, on which grows cotton so much more fleecy and fine of fibre than the product of the interior, that it is known the world over as Sea Island cotton, and sells at the highest price in the markets of England. In '61 the islands bore the great hospitable manor-houses of the Southern planters; broad of rooms and wide of piazzas, and always open for the entertainment of travellers, were they friends or strangers. The planters living there were among the wealthiest in the South, at a time when all planters were wealthy. They numbered their slaves by thousands. Standing on the broad piazza of one of these Southern homes, one could see the rows of rough huts that made up the negro quarters, and hear faintly the sound of the banjo and rude negro melodies, mingling with the music of piano or harp within the parlor of the mansion-house. Refined by education and travel, the planters of the region about Port Royal made up a courtly society, until war burst upon them, and reduced their estates to wildernesses, and themselves to beggary.

At the head of the Beaufort River stood the little town of Beaufort. Before the war this was a thriving place; its magnificent harbor made it easily accessible for the largest merchant-ships, and the richly productive country round about furnished heavy cargoes of the fleecy staple that gave to the South the name of the "cotton kingdom." On Saturdays and holidays the broad streets of Beaufort would be crowded with carriages and horsemen from the neighboring plantations. The planters, in broad-brimmed hats and suits of snowy linen, thronged the broad piazzas of the hotel, or grouped together in the shade of the spreading trees that lined the streets, discussing the cotton crops and prices. Now all is changed. Beaufort is a sleepy little village, with no sign of trade, domestic or foreign; and the country round about, once dotted with handsome plantation homes, now seems a very wilderness, save where Northerners have erected for themselves winter homes on the Sea Islands.

It was late in October, 1861, when the final determination to attack the forts at Port Royal was reached. For weeks before, the squadron lying at Hampton Roads had been making preparations for a great naval movement, and all the newspapers of the North were filled with wise speculations as to its objective point. Reporters, correspondents, and editors were alike baffled in their efforts to secure accurate information; and even the commanders of

the men-of-war were ignorant of their destination. But it seems that the Confederates were warned by some of their sympathizers in Washington, and the destination of the fleet was better known south of Mason and Dixon's line than in the North. On Tuesday, Oct. 29, the squadron was all ready for the voyage. It was by far the most powerful fleet ever gathered under the flag of the United States. Twenty-five vessels laden with coal had sailed the day before. On the placid waters of the bay, under the

FORTRESS MONROE.

frowning walls of Fortress Monroe, floated fifty men-of-war and transports. The day was clear, and the breeze brisk, and the hearts of the jolly jack-tars bounded within them as they thought of escaping from the long inactivity of a season in port. Long-boats bearing despatches rowed from ship to ship; hucksters from the shore came off in dories, dingies, and all variety of queer craft, to drive a farewell bargain with the sailors. The transport vessels were crowded with soldiers in the gay uniforms of militia commands.

(It was early in the war then, and they had not learned that a man could fight as well in dingy rags.) The "Wabash" was flag-ship, and aboard her was Admiral DuPont. When she made the signal for getting under way, all was bustle and animation on all the other vessels of the fleet, and on all sides could be heard the noise of preparation for the start. The boatswains piped away cheerily; and a steady tramp, tramp, from the deck of each ship, and the clicking of the capstan catches, told that the anchors were coming up. Soon from the black funnels of the steamers clouds of smoke began to pour, and in the rigging of the sail frigates were crowds of nimble sailors. The commands "All ready! Let fall!" rang sharply over the water from the ships. Broad sheets of snowy canvas appeared where before were but ropes and spars, and in a moment the whole squadron was under way. The steamers led off briskly, with much churning of the water by their paddle-wheels and "brazen-fins;" after them followed the magnificent sailing-frigates, with sail set, — lofty masses of canvas towering toward the skies, and moving with stately grace. At the very head of all went the flag-ship, the grand old "Wabash," with the flag of Admiral DuPont floating from the fore. None of the commanders knew whither they were bound. All were to follow the flag-ship, and in event of separation to refer to sealed orders with which each was provided. For the first day all went well. The promise of fair weather given by the beautiful day of starting seemed about to be fulfilled. But on the second night, as they came near the terrible region of Cape Hatteras, the wind began to freshen, and continued increasing in fierceness until it fairly blew a gale. The night was pitchy dark, and the crews on the vessels could hardly see the craft by which they were surrounded. Great as was the danger of being cast on the treacherous shoals of Hatteras, the peril of instant destruction by collision was even more imminent. Fifty vessels, heavily freighted with human lives, were pitching and tossing within a few rods of each other, and within a few miles of a lee shore. It seemed that the destruction of a large number of the vessels was unavoidable; and the sailors may be pardoned, if, remembering the mishaps of the Burnside expedition, they conceived Hatteras to be tenanted by an evil spirit, determined to prevent the invasion of Confederate territory. To add to the danger, the Confederates had extinguished the warning light at the Cape, and the navigators of the fleet had nothing to guide them in their course. When morning came, the fleet was pretty well scattered, although

still many vessels were near enough together to be in no small danger. The transport "Winfield Scott," which carried four hundred and fifty soldiers, besides a large crew, was observed to be rolling heavily, and flying signals of distress. From the decks of the "Bienville," the nearest steamer, the officers with their glasses could see the crew of the distressed vessel working like beavers, throwing overboard every thing of weight to lighten the ship. Notwithstanding all their efforts, she was clearly water-logged, and sunk so low in the water that wave after wave broke over her decks, every now and then sweeping a man away to sure death in the raging sea. It seemed folly to attempt to launch lifeboats in such a furious sea, but the captain of the "Bienville" determined to make the attempt to save the men on the doomed "Winfield Scott." The crew was piped to quarters, and the captain asked for volunteers to go to the rescue. Man after man stepped forward, until enough had been secured to man three boats with ten men each. Carefully the boats were dropped into the sea, and man after man swung into them; then they put off and started for the sinking ship. But while these preparations were being made, the two ships had been drifting closer and closer together. Soon it was seen that a collision was inevitable. Fortunately the boats were broadside on, so that the cutting effect of a blow from the bow was avoided. They were presently so near each other that the men began jumping from the deck of the "Winfield Scot" upon that of the "Bienville." The leap, though a perilous one, was made in safety by over thirty men. Suddenly a great wave lifted the ships up and dashed them together. Three poor wretches, just about to jump, were caught between the vessels and crushed to death. A few sharp cries of agony, and all was over; and the vessels, drifting apart, let their bodies, crushed beyond recognition, fall into the water. By this time the small boats, with their determined crews on board, had succeeded in getting around to the lee side of the sinking ship, and the work of getting the soldiers and sailors over the side was begun. By the most strenuous efforts all were saved, and the "Bienville" steamed away, leaving the "Winfield Scott" to her fate.

Night came on, with the gale blowing with still greater fury. The wind shrieked through the cordage, and now and again a great wave would sweep across the decks of the crowded vessels, making the men hang on to the rigging for dear life. Soon another ship began to go to pieces. The "Governor," which had been steaming along near the "Wabash"

DU PONT'S EXPEDITION OFF CAPE HATTERAS.

since the time of leaving Hampton Roads, had become separated from her consort during the gale of the first day. On the second night, those aboard her perceived that she was showing signs of weakness, and was likely to go down with all on board unless aid could be obtained. Not a sail, however, was in sight; and every wave seemed about to overwhelm or dash to pieces the frail craft. She labored heavily in the furious sea. By and by the strain on her timbers was such that the port hog-brace broke in two places, weakening the vessel so that her fate was apparent to all. Soldiers and sailors worked away with a frantic energy born by the fear of death, and succeeded in bracing up the timbers, so as to avoid, for a time, the breaking-up. Soon after, a heavy roll of the vessel broke the smoke-stack, and it was pitched overboard. Luckily it broke some three feet above the deck, so that the fires could still be kept up. Then the steam-pipe burst; and with this accident the fate of all on board seemed sealed, for they no longer could keep the vessel's head to the waves, and the great seas came rolling over her, sweeping her decks of every thing movable. They began sending up rockets, and, after some time of anxious waiting, saw an answering signal; so that, through the remainder of that fearful night, the men on the doomed ship felt that, whatever might occur, they had friends at hand. The night was spent in toil at the pumps; and in the morning a faint cheer went up as two vessels were seen, ready to lend assistance. A signal of distress, quickly hoisted, was answered from the nearer, which proved to be the "Isaac P. Smith." The "Smith" sent off a boat and made fast a hawser to the wreck, and took her in tow; but in a few minutes the hawser parted. It became clear that the men must be taken off the sinking ship; but how to do it, was the question. By this time a second ship, the "Young Rover," had arrived to assist in the rescue. A second cable was put aboard; but this, too, parted. Hope seemed lost, when the lookout reported a third ship, the frigate "Sabine," coming to the rescue. The "Sabine" came to anchor, and sent a hawser aboard the sinking "Governor." Then the hawser was gradually taken in until the two ships lay close together, stern to stern. Spars were rigged over the stern of the frigate, and some thirty men swung over the seething waters to safety. Then the two vessels came together with a crash, and about forty men sprang from the sinking ship to the deck of the frigate. But the damage done by the collision was so great that it was deemed prudent to slack up the hawser and let the "Governor" drop astern again. Those

on board busied themselves throwing overboard all things movable, with the intention of lightening the vessel. After some hours of suspense, the work of getting the men off the sinking craft was recommenced, and boats were sent to their assistance. The sea was running too high for them to approach close to the steamer's guards, so they lay off some feet, and the soldiers jumped into them. It was a perilous leap, with the boats pitching one way, and the ship another, and a raging sea of tossing waters between; but it was made bravely by every man, and but seven or eight were lost. Soon after the last man left the "Governor," she lurched to one side and sank, carrying with her the arms and ammunition of the troops she was transporting.

It was on Monday morning, Nov. 4, that the flag-ship "Wabash" cast anchor off Port Royal. In the offing were a few more sail headed for the same point, and during the day some twenty-five vessels of the scattered squadron came up. For the next day ships were constantly arriving, and by Tuesday night the whole squadron lay safely anchored in the broad harbor.

The defences which the Confederates had erected upon Hilton Head, a lofty bluff overlooking the harbor, were powerfully designed earthworks, poorly armed and manned. The forts were two in number, placed on a commanding elevation, and might have been made impregnable had the Confederates taken advantage of the warning sent them by their spies in Washington. Fort Walker had fourteen guns which could bear on an attacking fleet, and Fort Beauregard had twenty. When the fight began, the gunners found that most of their ammunition was either too large or too small for the guns. To support the forts in their fight, was a wretched little fleet of tugs and schooners, mounting a gun or two each, but absolutely powerless before the smallest of Du Pont's ships-of-war. Indeed, when the battle began, the Union navy gave its undivided attention to the forts, and did not even give battle to Tatnall's mosquito fleet.

Thursday morning dawned bright and mild as a morning in June. The shores of the beautiful bay were covered with woods, out of which rung the clear notes of Southern song-birds. The scene from the ships was one of the most charming imaginable. The placid bay, the luxuriant shores, the ocean showing across the low-lying ridge of white sand, the forts frowning from the steep headland, the fleet of majestic frigates mustered for the attack and in the distance the flotilla of defenceless

transports, safely out of range, their decks and rigging crowded with fifteen thousand men—all this presented a panorama of life and beauty which few eyes have ever beheld.

Du Pont, in the majestic "Wabash," moved down the bay, and, as he came in range of Fort Walker, sent a shell shrieking from a bow-gun, as signal that the action was begun. The old frigate moved on slowly, making

THE OPENING GUN.

play with the bow-guns until abreast of the fort, when with a crash she let fly her whole broadside. On she went for a few yards, then turning in a grand circle came back, giving the other broadside to the forts as she passed. The other ships fell in behind; and round and round before the forts the fiery circle revolved, spitting out fire and ponderous iron bolts, and making the peaceful shores of the bay tremble with the deep reverberations of the cannon.

The Confederates, for their part, went into the action with the utmost coolness. They had been assured that their position was impregnable, and had been cautioned to be deliberate and determined in their defence. For a time their artillery service was admirable. But soon they found certain discouraging features about the affair. Their guns were too light to have any effect on the fleet, and their powder was of such bad quality that many of their shots fell short. Two great guns dismounted themselves, seriously injuring the men who were handling them, and the very first broadside from the fleet dismounted several more. Then it was found that the shells for the great Parrott guns were too large, and that the shells from other cannon failed to explode, owing to defective fuses. Soon the fleet found a point of fire from which it could enfilade the forts, and thereafter a perfect hail of shell and grape-shot fell in the trenches. One shell disabled eleven men. A solid shot struck a gun thought to be perfectly protected, and hurled it, with the men serving it, over the parapet. Every twenty minutes a gun was dismounted in Fort Walker, and at the end of the conflict Fort Beauregard had but nine serviceable guns.

For about four hours there was no cessation of fire on the part of the fleet. Round and round the circle the vessels steamed, giving one fort a broadside on the way up, and the other a broadside on the way down. The bombs rose from them in a majestic sweep through the air, and plunged into the fort, exploding with a roar equal to that of a cannon. One ship was commanded by Capt. Drayton, who rained shot and shell mercilessly against the forts, although one of them was in command of his own brother.

At half-past one Fort Walker was found untenable, and the work of abandoning it was begun. The evacuation was completed in great haste, many valuables were left behind, and not even the guns were spiked. Still the entire garrison escaped to mainland, although the Federals had three thousand troops who might have made them all prisoners. Not long thereafter, Fort Beauregard also yielded to fate, and the day was won by the Federals.

The landing of the troops was at once begun. Thirty large boats bore a Connecticut regiment of one thousand men to the beach. Their bright, fresh uniforms, their muskets glittering in the sun, and their regular, swaying stride as they marched up the sandy beach to the martial

strains of the regimental band, made a striking picture. They clambered over the ramparts, and in a few moments the stars and stripes floated from the staff which had but lately upheld the flag of the young Confederacy. Within the forts, all was carnage and confusion: dismounted cannon, surrounded by the dead bodies of the gunners, heaps of shells, and fragments of wood-work, were piled about the parade-ground and in the trenches. The story of the terrific bombardment was graphically told by those horrible evidences of death and destruction. And well might the scene be a horrible one. For over five hours, fifty shot a minute had been discharged at the forts, and most of them did execution. When one recollects that each shot of the great guns cost eight dollars, we get a vivid idea of the money spent in war.

Immediately upon the capture of Hilton Head, the victors began making it a great naval and military station. Great storehouses were built, wharves constructed, and vast intrenchments thrown up for the defence of the spot. The slaves, escaping from the neighboring plantations, came in droves, begging to be allowed to work; but they received but a cold welcome, for they were still looked upon as property, and the officers did not wish to be charged with enticing them away from their masters.

The news of the occupation of Hilton Head by the Northern armies caused the greatest consternation in the cities of Charleston and Savannah. From both places people fled into the interior, expecting an immediate advance of the Union troops. But the armies were set to digging, not to marching, and soon the affrighted citizens returned to their homes. Port Royal was held by the Northern forces until the end of the war, and proved of great value for the proper maintenance of the blockade. Its greatest disadvantage was its unhealthiness. Of fifteen thousand men landed there in November, five thousand were on the sick-list within a month.

CHAPTER IX.

THE FIRST IRON-CLAD VESSELS IN HISTORY.—THE "MERRIMAC" SINKS THE "CUMBERLAND," AND DESTROYS THE "CONGRESS."—DUEL BETWEEN THE "MONITOR" AND "MERRIMAC."

LT will be remembered that when the Union forces, alarmed by the threatening attitude of the inhabitants of Norfolk and the vicinity, fled from the Norfolk navy-yard, leaving every thing there in flames, they left behind them a fine United States frigate, "Merrimac," a ship of thirty-five hundred tons, carrying forty guns. The departing Federals did their work of destruction fairly well; for the great ship was burnt to the upper edge of her copper sheathing, and sank to the bottom of the river. Three or four months after the occupation of the Norfolk navy-yard by the Confederates, Lieut. George M. Brooke, an ex-officer of the United States navy, who had resigned that he might follow the fortunes of his State, while looking at the hulk lying in the river-channel, was suddenly inspired with the thought that she might be raised and converted into a formidable vessel-of-war. He carefully matured his plans, and after due consideration proposed to the Confederate secretary of the navy, that the "Merrimac" be raised and converted into an iron-clad. His plans were approved, and orders were given that they should be carried out. The "Merrimac," as originally built, was one of the grand old types of war-vessels. Her solid oak sides rose high above the water, and were pierced by a long row of gaping port-

holes. Her masts towered high in the air; and when her great sails were set, her hull seemed crushed beneath so vast an expanse of canvas. When she had been remodelled, her entire appearance was changed. She had no longer the appearance of a ship, but seemed like a house afloat; and tradition says that the old salt on the "Cumberland," who first sighted her, reported gravely to the officer of the deck, "Quaker meetin'-house floating down the bay, sir."

When the hulk had been raised and placed in the dry-dock, the first thing done was to cut it down to the level of the berth-deck; that is, to the level of the deck below the gun-deck in the old rig. Then both ends of the ship were decked over for a distance of seventy feet; while the midship section was covered by a sort of roof, or pent-house, one hundred and seventy feet long, and extending about seven feet above the gun-deck. This roof was of pitch pine and oak, twenty-four inches thick, and covered with iron plates two inches thick. The upper part of the roof, being flat, was railed in, making a kind of promenade deck. In the great chamber formed by this roof were mounted ten guns, two of which, the bow and stern guns, were seven-inch rifles, and fairly powerful guns for those days. A strange feature of this ship, and one that was not discovered until she was launched, was that the weight of the iron-plating and the heavy guns she carried sunk her so deep in the water that the low deck forward and aft of the gun-room was always under water; so much so that the commander of another ship in the Confederate navy writes that he was obliged always to give the "Merrimac" a wide berth, lest he should run his ship on some part of the ram which lay unseen beneath the surface of the water. Powerful as this ship was, she had some serious defects. The greatest of these were her engines. They were the same that had been in her as a United States vessel, and had been condemned by a naval board as very defective. Naturally several weeks under water had not improved them; but the Confederates could not be particular about machinery just then, and the old engines were left in the new ram. It was quickly found that they could not be depended upon more than six hours at a time; and one of the ship's officers, in writing years afterwards, remarks, "A more ill-contrived or unreliable pair of engines could only have been found in some vessels of the United States navy." The second faulty feature about the "Merrimac" was that her rudder and propeller were entirely unprotected. The ram which was so much dreaded, and which

made the "Merrimac" a forerunner of a new class of war-vessels, was of cast-iron, projecting four feet, and so badly secured that it was loosened in ramming the "Cumberland," and started a bad leak in the Confederate ship.

When this formidable vessel was completed, she was christened by her new owners the "Virginia;" but the name of the old United States frigate of which she was built stuck to her, and she has ever since been known as the "Merrimac," and so we shall speak of her in this narrative. She received as commander Commodore Franklin Buchanan, an ex-Union officer of ability and daring, to whom the cadets of the naval academy at Annapolis owe the beautiful situation of the academy, and many of its admirable features; for he it was, who, in 1845, under a commission from Mr. Bancroft, Secretary of the Navy, organized and located the naval academy, and launched that institution upon its successful career. Of officers the "Merrimac" had no lack, and good ones they were; but in her crew she was lamentably deficient. Most of the crew was made up of men from the army, who knew nothing of seamanship, but who could at any rate fire a gun. A few good sailors were obtained from those who escaped to Norfolk after the destruction of the Confederate flotilla at Elizabeth City by Capt. Rowan's squadron. They had but little chance for drills and exercise on the new ship, for up to the very hour of sailing she was crowded with workmen getting her ready for the task of breaking down the Yankee blockade. When she finally set out to do battle for the South, she was a new and untried ship: not a gun had been fired, and hardly a revolution of her engines had been made. And so she started down the river on her trial trip, but intending, nevertheless, to do battle with the strongest ships of the United States navy. Accompanying her were four small Confederate gunboats, — the "Beaufort," the "Yorktown," the "Jamestown," and the "Teaser." Soon rounding out into Hampton Roads, the little squadron caught sight of the Northern fleet at anchor, and made for them. An officer on the "Congress" thus tells the story of the events that followed:—

"The 8th of March was a fine mild day, such as is common in Southern Virginia during the early spring; and every one on board our ship was enjoying the weather, and pleasing himself with the prospect of going North in a day or two at farthest, and being relieved from the monotony

of a blockade at anchor. Some of us were pacing the poop, basking in the sun, and watching the gulls, which here, as all over the world, wherever a man-of-war is anchored, manage to find out when it is dinner-time, appearing regularly when the mess-tins are being washed, and the cooks are taking the buckets of broken victuals to the head to throw over-board. Then they chatter and scream, and fight for the remnants as they drift astern, until all is consumed, when they betake themselves to fresh fields out of sight until we pipe to dinner again.

"One bell had struck some time, when the attention of the quartermaster on watch was drawn to an unusual appearance against the fringe of woods away over in the Norfolk Channel. After gazing intently some time, he approached the officer of the deck, and presenting him the glass said, 'I believe *that thing* is a-comin' down at last, sir.'

"Sure enough! There was a huge black roof, with a smokestack emerging from it, creeping down towards Sewall's Point. Three or four satellites, in the shape of small steamers and tugs, surrounded and preceded her. Owing to the intervening land, they could not be seen from Hampton Roads until some time after we had made them out; but, when they did show themselves clear of the point, there was a great stir among the shipping. But they turned up into the James River channel instead of down toward the fort, approaching our anchorage with ominous silence and deliberation.

"The officers were by this time all gathered on the poop, looking at the strange craft, and hazarding all sorts of conjectures about her; and when it was plain that she was coming to attack us, or to force the passage, we beat to quarters, the "Cumberland's" drum answering ours.

"By a little after four bells, or two o'clock, the strange monster was close enough for us to make out her plating and ports; and we tried her with a solid shot from one of our stern-guns, the projectile glancing off her forward casemate like a drop of water from a duck's back. This opened our eyes. Instantly she threw aside the screen from one of her forward ports, and answered us with grape, killing and wounding quite a number. She then passed us, receiving our broadside and giving one in return, at a distance of less than two hundred yards. Our shot had apparently no effect upon her, but the result of her broadside on our ship was simply terrible. One of her shells dismounted an eight-inch

gun, and either killed or wounded every one of the gun's crew, while the slaughter at the other guns was fearful. There were comparatively few wounded, the fragments of the huge shells she threw killing outright as a general thing. Our clean and handsome gun-deck was in an instant changed into a slaughter-pen, with lopped-off legs and arms, and bleeding, blackened bodies, scattered about by the shells; while blood and brains actually dripped from the beams. One poor fellow had his chest transfixed by a splinter of oak as thick as the wrist; but the shell-wounds were even worse. The quartermaster, who had first discovered the approach of the iron-clad, — an old man-of-war's man, named John Leroy, — was taken below with both legs off. The gallant fellow died in a few minutes, but cheered and exhorted the men to stand by the ship, almost with his last breath. The 'Merrimac' had, in the mean time, passed up stream; and our poor fellows, thinking she had had enough of it, and was for getting away, actually began to cheer. For many of them it was the last cheer they were ever to give. We soon saw what her object was; for standing up abreast of the bow of the 'Cumberland,' and putting her helm apart, she ran her ram right into that vessel. The gallant frigate kept up her splendid and deliberate, but ineffectual, fire, until she filled and sank, which she did in a very few minutes. A small freight-steamer of the quartermaster's department, and some tugs and boats from the camp-wharf, put off to rescue the survivors, who were forced to jump overboard. In spite of shot from the Confederate gunboats, one of which pierced the boiler of the freight-boat, they succeeded in saving the greater number of those who were in the water. Seeing the fate of the 'Cumberland,' which sank in very deep water, we set our topsails and jib, and slipped the chains, under a sharp fire from the gunboats, which killed and wounded many. With the help of the sails, and the tug 'Zouave,' the ship was now run on the flats which make off from Newport News Point. Here the vessel keeled over as the tide continued to fall, leaving us only two guns which could be fought, — those in the stern ports. Two large steam-frigates and a sailing-frigate, towed by tugs, had started up from Hampton Roads to our assistance. They all got aground before they had achieved half the distance; and it was fortunate that they did so, for they would probably have met the fate of the 'Cumberland,' in which case the lives of the twelve or thirteen hundred men comprising their crews would have been uselessly jeopardized.

"After the 'Merrimac' had sunk the 'Cumberland,' she came down the channel and attacked us again. Taking up a position about one hundred and fifty yards astern of us, she deliberately raked us with eighty-pounder shell; while the steamers we had so long kept up the river, and those which had come out with the iron-clad from Norfolk, all concentrated the fire of their small rifled guns upon us. At this time we lost two officers, both elderly men. One was an acting master, who was killed on the quarter-deck by a small rifle-bolt which struck him between the shoulders, and went right through him. The other was our old coast pilot, who was mortally wounded by a fragment of shell. We kept up as strong a fire as we could from our two stern-guns; but the men were repeatedly swept away from them, and at last both pieces were disabled, one having the muzzle knocked off, and the other being dismounted. Rifles and carbines were also used by some of our people to try to pick off the 'Merrimac's' crew when her ports were opened to fire, but of course the effect of the small-arms was not apparent to us.

"It is useless to attempt to describe the condition of our decks by this time. No one who has not seen it can appreciate the effect of such a fire in a confined space. Men were being killed and maimed every minute, those faring best whose duty kept them on the spar deck. Just before our stern-guns were disabled, there were repeated calls for powder from them; and, none appearing, I took a look on the berth-deck to learn the cause. After my eyes had become a little accustomed to the darkness, and the sharp smoke from burning oak, I saw that the line of cooks and wardroom servants stationed to pass full boxes had been raked by a shell, and the whole of them either killed or wounded,—a sufficient reason why there was a delay with the powder. (I may mention here that the officer who commanded our powder division was a brother of the captain of the 'Merrimac.') The shells searched the vessel everywhere. A man previously wounded was killed in the cock-pit where he had been taken for surgical aid. The deck of the cock-pit had to be kept sluiced with water from the pumps, to extinguish the fire from the shells, although dreadfully wounded men were lying on this deck, and the water was icy cold; but the shell-room hatch opened out of the cock-pit, and fire must be kept out of there at all hazards, or the whole of us would go into the air together. In the wardroom and steerage, the bulkheads were all knocked down by

the shells, and by the axe-men making way for the hose, forming a scene of perfect ruin and desolation. Clothing, books, glass, china, photographs, chairs, bedding, and tables were all mixed in one confused heap. Some time before this, our commanding officer, a fine young man, had been instantly killed by a fragment of shell which struck him in the chest. His watch, and one of his shoulder-straps (the other being gone), were afterwards sent safely to his father, a veteran naval officer.

"We had now borne this fire for nearly an hour, and there was no prospect of assistance from any quarter, while we were being slaughtered without being able to return a shot. Seeing this, the officer who had succeeded to the command of the ship, upon consultation with our former captain (who was on board as a guest), ordered our flag to be struck. It is not a pleasant thing to have to strike your flag; but I did not see then, and do not see now, what else we were to do.

"A boat now boarded us with an officer from the 'Merrimac,' who said he would take charge of the ship. He did nothing, however, but gaze about a little, and pick up a carbine and cutlass, — I presume as trophies. One of the small gunboats then came alongside, and the officer from the 'Merrimac' left. The commander of the gunboat said that we must get out of the ship at once, as he had orders to burn her. Some of our people went on board of his craft as prisoners, but not many. As her upper deck was about even with our main-deck ports, our surgeon stepped out of one, and told the commanding officer that we had some dreadfully wounded men, and that we must have time to collect them, and place them on board his vessel, and, moreover, that our ship was on fire with no possibility of saving her. The reply was, 'You must make haste: those scoundrels on shore are firing at me now.' In fact, the rifle-balls were 'pinging' about very briskly, scarring the rusty black sides of the poor old frigate; for the Twentieth Indiana Regiment had come down from the camp to the point, and opened fire on the gunboat as she lay alongside of us. Our doctor having no desire to be killed, especially by our own people, jumped back into the port, just as the steamer, finding it too hot, shoved off and left us. As soon as she did so, they all opened upon us again; although we had a white flag flying to show we were out of action, and we certainly could not be held responsible for the action of the regiment on shore. After ten or fifteen minutes, however, they all withdrew,

and went down the channel, to bestow their attentions upon the frigate 'Minnesota' which was hard aground. Fortunately the 'Merrimac' drew too much water to come near the 'Minnesota' at that stage of tide, and the small-fry were soon driven off by the latter ship's battery. Night now approaching, the whole Rebel flotilla withdrew, and proceeded up the Norfolk Channel.

"Although relieved from the pressure of actual battle, we still had the unpleasant consciousness that the fire was making progress in the vicinity of our after-magazine; and we felt as I suppose men would feel who are walking in the crater of a volcano on the verge of eruption. Fortunately for us, the 'Merrimac' and her consorts had not fired much at our upper works and spars, the principal damage being inflicted upon our lower decks. We had, therefore, the launch and first cutter, — large boats, — which, with a little stuffing of shot-holes, were fit to carry us the short distance between our ship and the shore. The yard and stay-tackles were got up, and the boats put into the water, as soon as possible; the fire gaining, and the sun going down, in the mean time.

"By successive boatloads the survivors were all landed; the launch being brought up under the bill port, and the wounded, in cots, lowered into her by a whip from the fore yard, which was braced up for the purpose. This boat was nearly filled with water on her last trip, being a good deal damaged; obliging some of the officers, who had stayed until the last, to jump overboard into the icy cold water, and lean their hands on the gunwale, so as to relieve the boat of a part of their weight. She grounded in water about waist-deep; and the soldiers from the camp waded out and assisted our men in bearing on shore, and to the log hospital of the Twentieth Indiana, those who were in cots. We had managed to get the body of our gallant young commander on shore in one of the cots, as a wounded man. The mass of the men were so 'gallied,' to use a sailor phrase, by the time the action was over, what with enduring so severe a fire without being able to respond, and also with the knowledge that an explosion of the magazine might occur at any time, that I doubt whether they could have been induced to bring off a man whom they knew to be dead. The officers repeatedly went about the decks looking for wounded men; and I firmly believe that all who were alive were brought off. Our poor old ship, deserted by all but the dead, burned till about midnight, when she blew up."

The final destruction of the "Congress" must have been a most imposing spectacle. A member of the Confederate army, who was stationed in one of the batteries near the scene of action, thus describes it: "Night had come, mild and calm, refulgent with all the beauty of Southern skies in early spring. The moon, in her second quarter, was just rising over the rippling waters; but her silvery light was soon paled by the conflagration of the 'Congress,' whose lurid glare was reflected in the river. The burning frigate four miles away seemed very much nearer. As the flames crept up the rigging, every mast, spar, and rope glittered against the dark sky in dazzling lines of fire. The hull, aground upon the shoal, was plainly visible; and upon its black surface each port-hole seemed the mouth of a fiery furnace. For hours the flames raged, with hardly a perceptible change in the wondrous picture. At irregular intervals, loaded guns and shells, exploding as the flames reached them, sent forth their deep reverberations, re-echoed over and over from every headland of the bay. The masts and rigging were still standing, apparently intact, when about two o'clock in the morning a monstrous sheet of flame rose from the vessel to an immense height. The ship was rent in twain by the tremendous flash. Blazing fragments seemed to fill the air; and, after a long interval, a deep, deafening report announced the explosion of the ship's powder-magazine. When the blinding glare had subsided, I supposed that every vestige of the vessel would have disappeared; but apparently all the force of the explosion had been upward. The rigging had vanished entirely, but the hull seemed hardly shattered; the only apparent change in it was that in two or three places, two or three of the port-holes had been blown into one great gap. It continued to burn until the brightness of its blaze was effaced by the morning sun."

In the great drama of the first day's fight at Hampton Roads, the heroic part was played by the frigate "Cumberland." On the morning of that fateful 8th of March, she was swinging idly at her moorings, her boats floating at the boom, and her men lounging about the deck, never dreaming of the impending disaster. It was wash-day, and from the lower rigging of the ship hung garments drying in the sun. About noon the lookout saw a cloud of smoke, apparently coming down the river from Norfolk, and at once notified the officer of the deck. It was surmised that it might be the new and mysterious iron-clad "Merrimac," about which many rumors were current, but few facts known. Quickly the ship was set in trim for action, and

ENGAGEMENT OF THE "MONITOR" AND "MERRIMAC," MARCH 9, 1862

the men sent to quarters. All the stern preparations for battle were made—the guns all shotted, the men in position, the magazines opened; shot, shell, cartridges, all in place; the powder-boys at their stations; swords, pistols, boarding-pikes, in the racks. Down in the cock-pit the surgeons spread out upon their tables the gleaming instruments, which made brave men shudder with the thought of what a few minutes would bring.

The sailors prepared for the fight gayly, never doubting for a moment that victory would be on their side. So paltry had been the resistance that the Confederates had heretofore been able to oppose to the Northern arms, by sea, that the blue-jackets felt that they had only to open a fight in order to win it. The officers were more serious. Rumors had reached them that the "Merrimac" was a most powerful vessel, destined to annihilate the navy of the North; and they looked on this first battle with the monster with many misgivings. Their fears were somewhat lessened by an article printed in the Norfolk papers, a few days previous, denouncing the "Merrimac" as a bungling bit of work, absolutely unseaworthy, and unable to stand against the powerful vessels of the North. As it turned out, however, this article was published as a *ruse* to deceive the Northern authorities.

The iron ship came steaming sullenly down the bay. The "Congress" was the first ship in range, and a puff of smoke from the "Merrimac's" bow-gun warned the crew of the frigate that danger was coming. All held their breath an instant, until, with a clatter and whiz, a storm of grape-shot rattled against her sides, and whistled through the rigging. Then came a sigh of relief that it was no worse. When the enemy was within a quarter of a mile, the "Congress" let fly her whole broadside, and the crew crowded the ports to see the result. The great iron shot rattled off the mailed sides of the monster, like hailstones from a roof. Then came the return fire; and the "Congress" was riddled with shells, and her decks ran with blood. The "Merrimac" passed sullenly on.

Now it was the turn of the "Cumberland." Her officers and crew had seen the results of the fire of the "Congress," and, with sinking hearts, felt how hopeless was their own position. There was no chance for escape, for no wind filled the sails of the frigate. She lay helpless, awaiting the attack of the iron battery that bore down upon her, without firing a shot or opening a port. At a little past two the mailed frigate had approached the "Cumberland" within grape-shot distance. Fire was opened upon

her with the heaviest guns; and officers and men watched breathlessly the course of their shot, and cried aloud with rage, or groaned in despair, as they saw them fall harmlessly from the iron ship. Still they had no thought of surrender. The fire of the "Cumberland" was received silently by the "Merrimac;" and she came straight on, her sharp prow cutting viciously through the water, and pointed straight for her victim. A second broadside, at point-blank range, had no effect on her. One solid shot was seen to strike her armored sides, and, glancing upward, fly high into the air, as a baseball glances from the bat of the batsman; then, falling, it struck the roof of the pilot-house, and fell harmlessly into the sea. In another instant the iron ram crashed into the side of the "Cumberland," cutting through oaken timbers, decks, and cabins. At the same time all the guns that could be brought to bear on the Northern frigate were discharged; and shells crashed through her timbers, and exploded upon her decks, piling splinters, guns, gun-carriages, and men in one confused wreck. Had not the engines of the ram been reversed just before striking the frigate, her headway would have carried her clear to the opposite side of the doomed ship, and the "Cumberland," in sinking, would have carried her destroyer to the bottom with her. As it was, the "Merrimac," with a powerful wrench, drew out of the wreck she had made, loosening her iron prow, and springing a serious leak in the operation. She drew off a short distance, paused to examine the work she had done, and then, as if satisfied, started to complete the destruction of the "Congress."

And well might the men of the "Merrimac" be satisfied with their hour's work. The "Cumberland" was a hopeless wreck, rapidly sinking. Her decks were bloodstained, and covered with dead men, and scattered arms and legs, torn off by the exploding shells. And yet her brave crew stuck to their guns, and fought with cool valor, and without a vestige of confusion. They had had but a few moments to prepare for action; and the long rows of clothes, drying in the rigging, told how peaceful had been their occupation before the "Merrimac" appeared upon the scene. Yet now that the storm of battle had burst, and its issue was clearly against them, these men stood to their guns, although they could feel the deck sinking beneath them. Every man was at his post; and even when the waters were pouring in on the gun-deck, the guns were loaded and fired. Indeed, the last shot was fired from a gun half buried in the waves. Then the grand old frigate set-

tled down to the bottom, carrying half her crew with her, but keeping the stars and stripes still floating at the fore.

The destruction of the "Cumberland" being completed, the "Merrimac" steamed over to the "Congress." This frigate fought well and valorously, but was soon pounded into a helpless condition by the shells of the "Merrimac," as shown by the story of her officer, already quoted. When a white flag, floating at her peak, told of surrender, the "Merrimac" left her to the attention of the smaller vessels in the Confederate flotilla, and set out to find further victims. But by this time the remainder of the Federal fleet had taken alarm, and fled into a safe position under the shelter of the Federal batteries on shore. The "Minnesota" only had been unfortunate in her attempted flight, and was aground on a bar near the scene of the fight. But now only two hours of daylight remained, and the tide was low, and still on the ebb. The heavy iron frigate could not get within effective distance of the "Minnesota," her crew were weary with a day's fighting, and so she turned away and headed up the river for Norfolk.

In taking account of injuries on the ram that night, it was found that the injured numbered twenty-one; many of whom had been shot while alongside the surrendered "Congress." Not an atom of damage was done to the interior of the vessel, and her armor showed hardly a trace of the terrible test through which it had passed. But nothing outside had escaped: the muzzles of two guns had been shot off; the ram was wrenched away in withdrawing from the "Cumberland;" one anchor, the smoke-stack, steam-pipe, railings, flag-staff, boat-davits—all were swept away as though a huge mowing-machine had passed over the deck. But, so far as her fighting qualities were concerned, the "Merrimac" was as powerful as when she started out from Norfolk on that bright spring morning.

It can easily be understood that the news of the engagement caused the most intense excitement throughout this country, and indeed throughout the whole world. In the South, all was rejoicing over this signal success of the Confederate ship. Bells were rung, and jubilees held, in all the Southern cities. An officer of the "Merrimac," who was despatched post-haste to Richmond with reports of the engagement, was met at every station by excited crowds, who demanded that he tell the story of the fight over and over again. At last the starving people of the Confederacy saw the way clear for the sweeping away of the remorseless blockade.

In the North, the excitement was that of fear. The people of seaboard cities imagined every moment the irresistible iron ship steaming into their harbors, and mowing down their buildings with her terrible shells. The Secretary of War said, at a hastily called cabinet meeting in Washington: "The 'Merrimac' will change the whole character of the war: she will destroy every naval vessel; she will lay all the seaboard cities under contribution. Not unlikely we may have a shell or cannon-ball from one of her guns, in the White House, before we leave this room."

In this excited state, wild with joy, or harassed with fear, the whole country went to sleep that March night, little dreaming that the morrow would change the whole face of the naval situation, and that even then a little untried vessel was steaming, unheralded, toward Hampton Roads, there to meet the dreaded "Merrimac," and save the remnants of the Federal fleet. Then no one knew of the "Monitor;" but twenty-four hours later her name, and that of her inventor Ericsson, were household words in all the States of the Union and the Confederacy.

Capt. John Ericsson was a Swedish engineer, residing in this country, who had won a name for himself by inventing the screw-propeller as a means of propulsion for steamships. He and a Connecticut capitalist, C. S. Bushnell by name, had ever since the opening of the war been trying to induce the Government to build some iron-clads after a pattern designed by Ericsson, and which afterwards became known as the "monitor" pattern. Their labors at Washington met with little success. After a long explanation of the plan before the wise authorities of the Naval Board, Capt. Ericsson was calmly dismissed with the remark, "It resembles nothing in the heavens above, or the earth beneath, or the waters under the earth. You can take it home, and worship it without violating any Commandment." Finally, however, leave was obtained to build a monitor for the Government, provided the builders would take all financial risks in case it proved a failure. So, with this grudging permission, the work of building the warship that was destined to save the Federal navy was begun. Work was prosecuted night and day, and in one hundred days the vessel was ready for launching. Great was the discussion over her. Distinguished engineers predicted that she would never float; and many attended the launch expecting to see the vessel plunge from the ways to the bottom of the river, like a turtle from a log. So general was this opinion, that boats were

in readiness to rescue her passengers if she went down. But Capt. Ericsson's plans were well laid. The great vessel glided with a graceful dip into the river, and floated at her cables buoyantly. She was a strange-looking craft. All that was to be seen of her above water was a low deck about a foot above the water, bearing in the centre a large round iron turret pierced with two great port-holes. Besides the turret, the smooth surface of the deck was broken by two other elevations, — a small iron pilot-house forward, made of iron plates about ten inches thick, and with iron gratings in front; aft of the turret was a low smoke-stack. Beneath the water-line this vessel had some strange features. The upper part of her hull, forming the deck, projected beyond her hull proper about four feet on every side. This projection was known as the "overhang," and was designed as a protection against rams. It was made of white oak and iron, and was impenetrable by any cannon of that day; although now, when steel rifled cannon are built that will send a ball through twenty inches of wrought iron, the original "Monitor" would be a very weak vessel.

The turret in this little vessel, which held the two guns that she mounted, was so arranged as to revolve on a central pivot, thus enabling the gunners to keep their guns continually pointed at the enemy, whatever might be the position of the vessel. When the time for the first battle actually arrived, it was found that the turret would not revolve properly; but in later ships of the same class this trouble was avoided.

It was at two o'clock on the morning after the day on which the "Merrimac" had wrought such havoc among the ships of the North, that this queer-looking little vessel steamed into Hampton Roads. As the gray dawn began to break, she passed under the quarter of the "Minnesota," and cast anchor. The tars on the great frigate looked curiously at the strange craft, and wondered if that insignificant "cheese-box on a raft" was going to do battle with the dreaded "Merrimac." Small hopes had they that their noble frigate would be saved by any such pygmy war-ship.

In the mean time, the men of the "Merrimac" up at Norfolk were working energetically to prepare her for the destruction of the rest of the Union ships. Her ram was tightened in its place, her steering apparatus overhauled, and some changes made, and her rickety engine was patched up. At daybreak all was bustle as the ram prepared to move down on the

Union fleet. But just as she was about to start, her officers saw the queer craft lying by the "Minnesota," which they at once knew to be the Ericsson "Monitor." Her appearance was not very terrible; but, nevertheless, the Confederates felt that she had appeared at a most inopportune moment for them. Still they raised anchor, and started down the bay to meet their mysterious enemy.

It was Sunday morning, and the sun rose in a cloudless blue sky. A light breeze stirred the surface of the water, and played lazily with the long streaming pennants of the men-of-war. The batteries on both sides of the bay were crowded with men waiting for the great naval battle of the day. Up at Norfolk a gay holiday party was embarking on steam-tugs, to accompany the Confederate ship and witness the total destruction of the Union fleet. No thought of defeat ever entered the minds of the proud believers in the new iron-clad of the Confederacy.

At the first sign of life on board the "Merrimac," the "Monitor" began her preparations for the battle. In fifteen minutes she was in battle trim. The iron hatches were closed, the dead-light covers put on, and obstructions removed from the main deck, so as to present a smooth surface only twenty-four inches above the water, unbroken, save by the turret and pilot-house. In the pilot-house was Lieut. Worden, who was to command the "Monitor" in this her first battle.

Leisurely the "Merrimac" came down the bay, followed by her attendant tugs; and, as she came within range, she opened fire on the "Minnesota," which was still aground. The frigate responded with a mighty broadside, which, however, rattled off the mailed sides of the ram like so many peas. Clearly, every thing depended upon the "Monitor;" and that little craft steamed boldly out from behind the "Minnesota," and sent two huge iron balls, weighing one hundred and seventy pounds each, against the side of the "Merrimac." The shot produced no effect beyond showing the men of the "Merrimac" that they had met a foeman worthy of their steel. The "Merrimac" slowed up her engines, as though to survey the strange antagonist thus braving her power. The "Monitor" soon came up, and a cautious fight began; each vessel sailing round the other, advancing, backing, making quick dashes here and there, like two pugilists sparring for an opening. The two shots of the "Monitor" would come banging one after the other against the "Merrimac's" armor, like the "one, two" of a skilled boxer. In this

dancing battle the "Monitor" had an enormous advantage, on account of her size, greater speed, and the way in which she answered her helm. The "Merrimac" was like a huge hawk being chased and baited by a little sparrow. Her heavy broadsides found nothing to hit in the almost submerged hull of the "Monitor." When a ball struck the turret, it glanced off, unless striking fair in the centre, when it fell in fragments, doing no greater damage than to dent the iron plates, and sometimes knocking down the men at the guns inside. The first manœuvre tried by the "Merrimac" was to run down her little antagonist; and she did strike her with a force that dented the iron overhang of the "Monitor," and dashed the men in the "Merrimac" to the deck, with blood streaming from their nostrils. For a moment it seemed as though the "Monitor" must go under; but gradually the terrible ram glanced off, and the little vessel, righting, sent again her terrible two shots at her enemy. In the action of the day before, shot and shell had beaten against the sides of the ram so rapidly that one could not count the concussions. Now it was a series of tremendous blows about a minute apart; and, if the men had not been working away at their guns, they could have heard the oak timbers splintering behind the iron plating. At a critical moment in the fight the "Merrimac" ran aground; and the "Monitor" steamed around her several times, seeking for weak places in which to plant a shot. Once Worden dashed at his adversary's screw, hoping to disable it, but missed by perhaps two feet. Two shots from the "Monitor" struck the muzzles of two cannon protruding from the port-holes of the "Merrimac," and broke them off, throwing huge splinters of iron among the gunners inside. And so the battle continued until about noon: gun answered gun with thunderous reports, that echoed back from the batteries on shore in rolling reverberations. The pleasure-seeking tugs from Norfolk had scuttled back again out of the way of the great cannon-balls that were skipping along the water in every direction. Neither of the combatants had received any serious injury. On board the "Monitor" the only hurt was received by a gunner, who was leaning against the iron wall of the turret just as a shot struck outside; he was carried below, disabled. But at last one lucky shot fired from one of the disabled guns of the "Merrimac" ended this gigantic contest; sending each contestant to her moorings, without an actual victory for either side. This shot struck full and fair against the gratings of the pilot-house, through which Lieut. Worden was looking as he directed the

course of his ship. The concussion knocked him senseless. Flakes of iron and powder were driven into his eyes and face, blinding him completely for the time. He fell back from the wheel, and the "Monitor" was left for a moment without her guiding spirit. All was confusion; but in a few moments Worden recovered, and gave the order to sheer off. The "Monitor" then drew away, while Worden was moved to the cabin, and the second officer sent to his station in the turret. Lying on a sofa in the cabin, his eyes bandaged, and the horror of life-long blindness upon him, Worden asked faintly, "Have I saved the 'Minnesota'?" — "Yes," answered the surgeon. "Then," said he, "I die happy."

While these scenes were transpiring on the "Monitor," the "Merrimac" lay quietly awaiting her return. The Confederate officers say that she waited an hour, and then, concluding that the "Monitor" had abandoned the fight, withdrew to Norfolk. The Northern officers and historians say that the "Merrimac" was in full retreat when the decisive shot was fired. It is hard to decide, from such conflicting statements, to which side the victory belonged. Certain it is, that not a man on the "Merrimac" was injured, and that all damages she sustained in the fight were remedied before sunrise the next day. Later, as we shall see, she challenged the Union fleet to a new battle, without response. But with all these facts in view, it must be borne in mind that the purpose of the "Merrimac," that bright March Sunday, was to destroy the frigate "Minnesota:" in that purpose she was foiled by the "Monitor," and to that extent at least the "Monitor" was the victor.

Lieut. Worden, after the fight, went directly to Washington. President Lincoln was at a cabinet meeting when he heard of Worden's arrival in the city, and hastily rising said, "Gentlemen, I must go to *that fellow*." Worden was lying on a sofa, his head swathed in bandages, when the President entered. "Mr. President," said he, "you do me great honor by this visit." — "Sir," replied Mr. Lincoln, while the tears ran down his cheeks, "I am the one who is honored in this interview."

Among his crew Worden was very much beloved. The following letter, sent him while on a bed of pain, is all the more touching for the rude form in which their affection for their commander is expressed:—

TO CAPTAIN WORDEN.

HAMPTON ROADS, April 24, 1862.

UNITED STATES MONITOR.

TO OUR DEAR AND HONORED CAPTAIN.

Dear Sir,—These few lines is from your own crew of the Monitor, with their kindest Love to you their Honored Captain, hoping to God that they will have the pleasure of welcoming you back to us again soon, for we are all ready able and willing to meet Death or any thing else, only give us back our Captain again. Dear Captain, we have got your Pilot-house fixed and all ready for you when you get well again; and we all sincerely hope that soon we will have the pleasure of welcoming you back to it. . . . We are waiting very patiently to engage our Antagonist if we could only get a chance to do so. The last time she came out we all thought we would have the Pleasure of sinking her. But we all got disappointed, for we did not fire one shot, and the Norfolk papers says we are cowards in the Monitor—and all we want is a chance to show them where it lies with you for our Captain We can teach them who is cowards. But there is a great deal that we would like to write to you but we think you will soon be with us again yourself. But we all join in with our kindest love to you, hoping that God will restore you to us again and hoping that your sufferings is at an end now, and we are all so glad to hear that your eyesight will be spared to you again. We would wish to write more to you if we have your kind Permission to do so but at present we all conclude by tendering to you our kindest Love and affection, to our Dear and Honored Captain.

We remain untill Death your Affectionate Crew

THE MONITOR BOYS.

The "Merrimac," after being repaired and altered to some extent, sailed down the bay on the 11th of April, for the purpose, as her officers said, of meeting the "Monitor" again. She steamed into the Roads, and exchanged a few shots with the Union batteries at the rip-raps; but the "Monitor," and other Union vessels, remained below Fortress Monroe, in Chesapeake Bay, out of the reach of the Confederate vessel. Again a few days later, the "Merrimac" went to Hampton Roads, and tried to lure the "Monitor" to battle; but again the challenge passed unanswered. It is probable that the Federal naval authorities did not care to imperil the only vessel that stood between them and destruction, out of mere bravado. Had the "Monitor" come out, an attempt would have been

made to carry her by boarding. The crew of the "Merrimac" were prepared for the attack; and four gunboats accompanying her were crowded with men, divided into squads, each with its specified duty. Some were to try and wedge the turret, some were to cover the pilot-house and all the openings with tarpaulin, others were to try to throw shells and gun-powder down the smoke-stack. But all these preparations proved useless, as the "Monitor" still remained quietly at her anchorage. On May 8 a third trip was made by the "Merrimac." When she came down the bay, she found the Union fleet, including the "Monitor," hard at work shelling the Confederate batteries at Sewall's Point. As she came towards them, they ceased their cannonade, and retired again to the shelter of Fortress Monroe. The "Merrimac" steamed up and down the Roads for some hours; and finally Commodore Tatnall, in deep disgust, gave the order, "Mr. Jones, fire a gun to windward, and take the ship back to her buoy."

Back to Norfolk she went, never again to leave that harbor. On the 9th of May the officers of the "Merrimac" noticed that the Confederate flag was no longer floating over the shore-batteries. A reconnoissance proved that the land forces had abandoned Norfolk, and it was necessary to get the ship away before the Union troops arrived and hemmed her in. Her pilots declared that if the ship was lightened they could take her up the James River; and accordingly all hands threw overboard ballast and trappings, until she was lightened three feet. Then the pilots claimed that with the prevalent wind they could not handle her. It was now useless to try to run her through the Union fleet, for the lightening process had exposed three feet of her unarmed hull to the fire of the enemy. It was accordingly determined that she should be destroyed. She was run ashore on Craney Island, and trains of powder laid all over her, and fired. Every gun was loaded, and the doors of the magazine were left open. Her crew then started on the march for the interior. It was just in the gray of the morning that a rumbling of the earth was felt, followed by a shock that made all stagger. A column of smoke and flame shot into the air; huge cannon were hurled high above the tree-tops, discharging in mid-air. One shot fell in the woods some distance ahead of the marching crew, and all knew that it marked the end of the mighty "Merrimac."

CHAPTER X.

THE NAVY IN THE INLAND WATERS.—THE MISSISSIPPI SQUADRON.—SWEEPING THE
TENNESSEE RIVER.

WE will now leave for a time the blue-water sailors, whose battles, triumphs, and defeats we have been considering, and look at the work done by the tars of both North and South on the great waterways which cut up the central portion of the United States, known as the Valley of the Mississippi. It was in this section that the navy of the North did some of its most effective work against the Confederacy, and it was there that the sailor boys of the South did many deeds of the most desperate valor. There is much of romance about service on the blue ocean which is not to be found in routine duty along the yellow muddy streams that flowed through the territory claimed by King Cotton. The high, tapering masts, the yards squared and gracefully proportioned, the rigging taut, and with each rope in its place, of an ocean-frigate, are not seen in the squat, box-like gunboats that dashed by the batteries at Vicksburg, or hurled shot and shell at each other in the affair at Memphis. But Farragut, stanch old sea-dog as he was, did much of his grandest fighting on the turbid waters of the Mississippi; and the work of the great fleet at Port Royal was fully equalled by Porter's mortar-boats below New Orleans.

Let us follow the fortunes of the Union fleet on their cruises about the great rivers of the interior, and first discover what the work was that they set out to perform.

The rivers making up the Mississippi system flow for the greater part of their length through the States that had joined the new Confederacy. The northern Confederate battle-line was along the south bank of the Ohio River, and there they had erected batteries that controlled the passage of that river. South of the mouth of the Ohio, every river was lined with Confederate batteries, and bore on its placid bosom fleets of Confederate gunboats. At Columbus on the Mississippi, not far south of the mouth of the Ohio, were strong batteries over which floated the stars and bars of the Confederacy. Farther down was Island Number 10, bearing one of the most powerful fortifications the world has ever seen. Then came Fort Pillow, guarding the city of Memphis; then at Vicksburg frowned earthworks, bastions, and escarpments that rivalled Gibraltar for impregnability. Lower down were fortifications at Grand Gulf, Port Hudson, and Baton Rouge. Fort Henry guarded the Tennessee River, and Fort Donelson the Cumberland, and both of these rivers were very important as waterways for the transportation of supplies to the Union armies marching into Tennessee. It was absolutely necessary that all these fortifications should be swept away, and the rivers opened for navigation down to the Gulf of Mexico. It was necessary that the work should be done from above; for the forts below New Orleans were thought to be impassible, and Farragut's passage of them late in the war made all the world ring with his name.

It became evident, very early in the war, that no great progress could be made in the task of crushing the powerful insurrection until telling blows had been struck at the Confederate control of the inland waterways. When the attention of the war department was turned in that direction, they found but little to encourage them in the prospect. Along the thousands of miles of the banks of the Mississippi and its tributaries, there was not one gun mounted belonging to the United States, not one earthwork over which floated the starry flag of the Union. The Confederate positions on this great chain of waterways were, as we have seen, of great strength. To attack them, the armies of the North must first fight their way through whole States populated by enemies. Obviously,

the war department alone could not complete so gigantic a task, and the services of the navy were called into requisition. So energetically did the navy department prosecute its task, that, by the end of the war, over one hundred Federal war-vessels floated on those streams, on which, three years before, no craft dared sail under the American flag. It was a strange navy in looks, but in actions it showed itself worthy of the service in which it was enlisted.

Many of the steamers built for the river marine were wooden gunboats, hastily remodelled from the hulks of old craft. They were seldom plated with iron, and their machinery was feebly protected by coal bunkers, while their oaken sides were barely thick enough to stop a musket-ball. But the true iron-clad war-vessel made its appearance on the rivers even before it was to be seen in the ocean squadrons.

It was as early in the war as July, 1861, that the quartermaster-general advertised for bids for the construction of iron-clad gunboats for service on the Mississippi and tributary rivers. The contract was given to James B. Eads, an engineer, who during the war performed much valuable service for the United States Government, and who in later years has made himself a world-wide fame by the construction of the jetties at the mouth of the Mississippi River, by which the bar at the mouth of the great stream is swept away by the mighty rush of the pent-up waters. Mr. Eads was instructed to build seven iron-clad gunboats with all possible expedition. They were to be plated two and a half inches thick, and, though of six hundred tons burden, were not to draw more than six feet of water. They were to carry thirteen heavy guns each.

These river-gunboats, like the little "Monitor," had none of the grace and grandeur of the old style of sailing-frigate, in which Paul Jones fought so well for his country. The tapering masts of the mighty frigate, the spidery cordage by which the blue-jackets climbed to loosen the snowy sheets of canvas—these gave way in the gunboat to a single slender flagstaff for signalling, and two towering smoke-stacks anchored to the deck by heavy iron cables, and belching forth the black smoke from roaring fires of pitch-pine or soft coal. Instead of the gracefully curved black sides, with two rows of ports, from which peeped the muzzles of great cannon, the gunboat's sides above water sloped like the roof of a house, and huge iron shutters hid the cannon from view. Inside, all was dark

and stuffy, making battle-lanterns necessary even in daylight fights. The broad white gundeck, scrubbed to a gleaming white by hollystone and limejuice, on which the salt-water sailors gathered for their mess or drill,

A RIVER-GUNBOAT.

was replaced by a cramped room, with the roof hardly high enough to let the jolly tars skylark beneath without banging their skulls against some projecting beam. Truly it may be said, that, if the great civil war

made naval architecture more powerful, it also robbed the war-vessels of all their beauty.

It is hard to appreciate now the immense difficulty experienced in getting those first seven river-gunboats built by the appointed time. The war had just begun, and a people accustomed to peace had not yet found out that those not actually at the seat of war could continue their usual course of life unmolested. Rolling-mills, machine-shops, founderies, saw-mills, and shipyards were all idle. Working-men were enlisting, or going to the Far West, away from the storm of war that was expected to sweep up the Mississippi Valley. The timber for the ships was still standing in the forests. The engines that were to drive the vessels against the enemy were yet to be built. Capt. Eads's contract called for the completion of the seven vessels in sixty-five days, and he went at his work with a will. His success showed that not all the great services done for a nation in time of war come from the army or navy. Within two weeks four thousand men were at work getting the gunboats ready. Some were in Michigan felling timber, some in the founderies and machine-shops of Pittsburg, and others in the shipyards at St. Louis, where the hulls of the vessels were on the stocks. Day and night, week-days and Sundays, the work went on; and in forty-five days the first vessel was completed, and christened the "St. Louis." The others followed within the appointed time. Before the autumn of 1861, the river navy of the United States numbered nearly a score of vessels, while nearly forty mortar-boats were in process of construction. Of this flotilla, Capt. A. H. Foote, an able naval officer, was put in command, and directed to co-operate with the land forces in all movements.

The first service to which the gunboats were assigned was mainly reconnoitring expeditions before the front of the advancing Union armies. They were stationed at the junction of the Ohio and Mississippi Rivers; and the country about Cairo was occupied by a large body of Union troops under the command of Gen. Grant, then a young officer little known. The opening fight of the river campaign was little more than a skirmish; but it proved the superiority of the gunboats over a land-force for the purpose of opening the river. One bright day in September, the "Lexington" and "Conestoga" were ordered to proceed down the river eight or ten miles, and dislodge a Confederate battery that had taken a position on

Lucas Point. The two vessels steamed cautiously down the stream, without encountering any resistance until within easy range of the battery, when the Confederates opened with sixteen cannon. The shot and shells fell all about the vessels; but neither was hit, showing that the Confederate gunners were not yet used to firing at a moving mark. But the fire of the gunboats was admirably directed; the shells falling among the Confederates, dismounting the guns, and driving the gunners from their pieces. It was too hot a spot for any man to hold; and a cavalry corps quickly attached their horses to the guns, and drew them down the river to the shelter of the Confederate works at Columbus. Then the defeated party sent up the gunboat "Yankee" to attack the two victors, but this vessel was quickly disposed of. She opened fire at long range, but without success. The first shot from the "Conestoga" struck the water a few feet from the "Yankee," and, ricochetting, plunged into her hull. The discomfited vessel immediately put about, and started down stream, followed by a heavy fire from the two Northern ships. Just as she was passing out of range, an eight-inch shell from the "Lexington" struck her starboard wheel-house, and shattered the paddle-wheel, totally disabling the vessel, so that she drifted sidelong to her anchorage like a wounded duck.

On the return of the Northern vessels up the river, they first encountered the form of warfare that proved the most perilous for the sailors of the river navy. Confederate sharp-shooters lined the banks, perched in the trees, or hidden in the long, marshy grass; and any unwary tar who showed his head above the bulwarks was made a target for several long rifles in the hands of practised shots.

The next active service performed by the gunboats was at the battle of Belmont, directly opposite the Confederate batteries at Columbus. The Union troops, landing in force, had driven the Confederates from their camp, and were engaged in securing the spoils, when the gunners at Columbus, seeing that the camp was in the hands of the enemy, turned their heavy guns on it, and soon drove out the Yankees. The Confederates had rallied in the woods, and now came pouring out, in the hope of cutting off the Union retreat to the boats. On all sides the dark gray columns could be seen marching out of the woods, and pouring down upon the retreating army of the North. Batteries were wheeling into position, and staff-officers in travelling carriages were dashing to and fro carrying orders.

It seemed a black day for the three or four thousand Unionists who were making for their transports with all possible speed. But now was the time for the gunboats to take a hand in the fight. Three of them dropped into position, and began a deadly fire upon the Confederate line. The huge shells ploughed their way through whole platoons of men. Bursting, they would mow down soldiers like saplings before a cyclone. One shell exploded directly beneath an officers' carriage, and threw horses, carriage, and men high in the air. The Confederates hastened to get their field-batteries into position, and replied to the deadly fire from the ships, but to no avail. Their light artillery was of no effect upon the plated sides of the gunboats, and they saw their cannon dismounted or shattered by the solid shot from the big guns of the iron-clads. They fought bravely, but the conflict was unequal. It was sheer madness for any body of men, with muskets and light artillery, to stand against the fire of the gunboats. The gunboats saved the day. The retreat of the Union army was unchecked; and, covered by the war-vessels, the transports returned safely to Cairo.

On the Tennessee River, near the northern boundary of Tennessee, the Confederates had thrown up certain earthworks to which they gave the name of Fort Henry. This, with Fort Donelson, situated near by, formed the principal Confederate strongholds in Tennessee. Gen. Grant determined to strike a heavy blow by capturing these two forts; and Commodore Foote, with his seven gunboats, was ordered to co-operate with the land-forces in the expedition. They started from Cairo on Feb. 2, 1862. When a few miles below the fort, the troops were landed and ordered to proceed up the back country, and attack the fort in the rear, while Foote should engage it from the river with his gunboats. While the troops were being landed, Gen. Grant boarded the "Essex," and went up the river to get a view of the fort they were about to attack. Had it been completed in accordance with the plans of the engineers, it would have been most formidable. Time, however, had been short, and the earthworks were far from being completed. There were many points on the river or on the opposite bank, from which a well-directed artillery fire would make them untenable. The Confederate commander, Gen. Tilghman, fully appreciated this fact, and, at the approach of the gunboats, had sent four-fifths of his garrison across the country to Fort Donelson, being determined to sacrifice as few men as possible in the defence of

so untenable a position. While Grant and Foote were examining the works through their field-glasses, the sullen boom of a great gun came over the waters, and a heavy rifled shot crashed through the stateroom of Capt. Porter on the "Essex." The two commanders concluded that the Confederate gunners, though new to war, understood something of artillery practice; and the "Essex" was accordingly taken down the river, out of range.

The following night was chill and rainy; and the Union forces, bivouacking on shore, grumbled loudly over their discomforts. The morning dawned dark; but soon the sun came out, and the preparations for battle were begun. The troops were first despatched on their cross-country march; and, as they departed, Commodore Foote remarked coolly, that his gunboats would have reduced the fort before the land forces came within five miles of it. This proved to be the fact.

The gunboats formed in line of battle, and advanced up the river. The four iron-clads led, steaming abreast. About a mile in the rear, came the three wooden vessels. The fort was soon in range; but both parties seemed anxious for a determined conflict, and no shot was fired on either side as the gunboats came sullenly on. How different must have been the feelings of the two combatants! Tilghman, with his handful of men, hardly able to work eight of the eleven guns mounted in his fort, and knowing that his defeat was a mere question of time; Foote, with his iron-clads and supporting gunboats, his seventy-two guns, and his knowledge that six thousand men were marching upon the rear of the Confederate works. On the one side, all was absolute certainty of defeat; on the other, calm confidence of victory.

When the flotilla was within a third of a mile of the fort, the fire began. The gunners on the ships could see the muzzles of the Confederate guns, the piles of shells and cannon-balls, and the men at their work. The firing on both sides was deliberate and deadly. The Confederates were new to the work, but they proved themselves good marksmen. The first shot was fired from the shore, and, missing the "Essex" by but a few feet, plumped into the water, so near the next ship in line as to throw water over her decks. Within five minutes, the "Essex" and the "Cincinnati" were both hit. The armor of the gunboats proved no match for the shots of the Confederates, and in many cases it was penetrated. In some instances, shells, entering through the port-holes, did deadly damage.

On the shore, the shells from the gunboats were doing terrible work. Banks of solid earth, eight feet thick, were blown away by the terrible explosions. One, bursting in front of a ten-inch columbiad, filled that powerful gun with mud almost to the muzzle, disabling it for the remainder of the fight. A shot from the "Essex" struck the muzzle of a great gun, ripped off a splinter of iron three feet long, and crushed a gunner to pulp. The gun was just about to be fired, and burst, killing or wounding every man of the crew. At the same moment a shell crashed through the side of the "Essex," killing men right and left: took off the head of a sailor standing by Capt. Porter, wounded the captain, and plunged into the boiler. In an instant the ship was filled with scalding steam. The men in the pilot-house were suffocated. Twenty men and officers were killed or scalded. The ship was disabled, and drifted out of the fight. While withdrawing, she received two more shots, making twenty in all that had fallen to her share in this hot engagement. But by this time the fort was very thoroughly knocked to pieces. The big twenty-four pounder was dismantled, and five of its crew killed. Gun after gun was keeled over, and man after man carried bleeding to the bomb-proofs, until Gen. Tilghman himself dropped coat and sword, and pulled away at a gun by the side of his soldiers. Receiving ten shots while they could only fire one, this little band held out for two long hours; and only when the crew of the last remaining piece threw themselves exhausted on the ground, did the flag come fluttering down. Gen. Tilghman went to the fleet and surrendered the fort to Commodore Foote, and Grant's army came up more than an hour after the battle was over. To the navy belongs the honor of taking Fort Henry, while to Gen. Tilghman and his plucky soldiers belongs the honor of making one of the most desperate fights under the most unfavorable circumstances recorded in the history of the civil war.

The fall of Fort Henry opened the way for the Union advance to Fort Donelson, and marked the first step of the United States Government toward regaining control of the Mississippi. It broke the northern battle-line of the Confederacy, and never again was that line re-established.

With Fort Henry fallen, and Gen. Tilghman and his little garrison prisoners on the Union gunboats, Grant's soldier-boys and Foote's blue-jackets began active preparations for continuing the conquest of Tennessee by the capture of Fort Donelson. No time was lost. The very night that

the stars and stripes were first hoisted over the bastion of Fort Henry saw three of Foote's gunboats steaming up the river on a reconnoitring expedition. Before them the Confederates fled in every direction. After several hours' advance, they came to a heavy railroad-bridge spanning the river, and effectually preventing further progress. Beyond the bridge were several Confederate steamers, black with men, and heavily laden with valuable military stores. With all steam on, they were dashing up stream, and rapidly leaving the gunboats behind. Enraged at seeing such valuable prizes slipping through their hands, the Union gunners sent shell after shell shrieking after the flying boats, but to no avail. A party was hastily landed for the purpose of swinging the draw of the bridge, but found the machinery broken, and the ways on which the bridge swung twisted and bent out of shape. An hour's hard work with axes and crowbars, and the draw was swung far enough to let pass the "Conestoga" and the "Lexington." They dashed forward like greyhounds slipped from the leash; and, after several hours' hard steaming, a smoke over the tree-tops told that the Confederate fugitives were not far ahead. Soon a bend in the river was passed; and there, within easy range, were two of the flying steamers. A commotion was visible on board, and boat after boat was seen to put off, and make for the shore; on reaching which the crews immediately plunged into the woods, and were out of sight before the gunboats could get within range. Soon light blue smoke curling from the windows of the steamers told that they had been fired; and as the last boats left each vessel, she ceased her onward course, and drifted, abandoned and helpless, down the stream. When within about a thousand yards of the two gunboats, the deserted steamers blew up with such force, that, even at that great distance, the glass was shattered in the "Conestoga," and her woodwork seriously damaged.

The two gunboats leisurely continued their excursion into the heart of the enemy's country. Little or no danger was to be feared. At that time, the Confederates had not learned to plant torpedoes in their rivers, to blow the enemy's vessels into fragments. There was no artillery stationed in that section to check their progress, and the only resistance found was an occasional rifle-shot from some concealed sharp-shooter in the bushes on the shore. On the 7th of February the gunboats reached Cerro Gordo. Tenn.; and here they made a valuable capture. The Confederates

had been at work for weeks converting the steamer "Eastport" into an iron-clad ram; and, as the Union vessels came up, they found her almost completed, and absolutely without defence. Besides the new vessel, there was in the shipyard a large quantity of lumber and ship-timber, which was of the greatest value to the builders of the river navy. The two gunboats promptly captured all this property; and waiting until the "Tyler," which had been detained at the drawbridge, came up, they left her in charge, and continued their raid into the enemy's country. Little incident occurred until they reached the head of navigation of the river, where they found all the Confederate vessels which had been flying before them for two days. These were burned, and the two gunboats started back down the river, stopping for the "Eastport" on the way. The captured vessel was afterwards completed, and served the cause of the Union for two years, when she was blown up on the Red River.

When the raiding expedition reached Cairo, the officers found Foote getting his squadron together for the attack on Fort Donelson. This fortification was one strongly relied upon by the Confederates for the maintenance of their northern line of battle. It was on the bank of the Cumberland River, nearly opposite the site of Fort Henry on the Tennessee. A garrison of at least fifteen thousand men manned the works, and were commanded by no less than three generals; and the fact that there were *three* generals in command had much to do with the fall of the fort. Its strength was rather on its river-front. Here the river winds about between abrupt hillsides, and on the front of one of these hills stood Fort Donelson. The water-batteries were made up of heavy guns, so mounted as to command the river for miles. On the landward side were heavy earthworks, abatis, and sharp pointed *chevaux-de-frise*.

Against this fortification marched Grant with an army of eighteen thousand men, and Foote with his flotilla of gunboats. The Sunday before the start, Foote, who was a descendant of the old Puritans, and ever as ready to pray as to fight, attended church in a little meeting-house at Cairo. The clergyman did not appear on time; and the congregation waited, until many, growing weary, were leaving the church. Then the bluff old sailor rose in his pew, and, marching to the pulpit, delivered a stirring sermon, offering thanks for the victories of the Union arms, and imploring divine aid in the coming struggles. The next day he was

on his way to hurl shot and shell at the men in the trenches of Fort Donelson.

While the capture of Fort Henry was a feather in the caps of the sailor-boys of the North, Fort Donelson must be credited to the valor of the soldiers. Against the heavy wall of the water-batteries, the guns of Foote's little flotilla pounded away in vain, while the heavy shells from the Confederate cannon did dreadful work on the thinly armored gunboats. It was on the 13th of April that the assault was opened by the "Carondelet." This vessel had reached the scene of action before the rest of the flotilla, and by order of the army commander tested the strength of the fort by a day's cannonade. She stationed herself about a mile from the batteries, at a spot where she would be somewhat protected by a jutting point, and began a deliberate cannonade with her bow-guns. One hundred and thirty shots went whizzing from her batteries against the front of the Confederate batteries, without doing any serious damage. Then came an iron ball weighing one hundred and twenty pounds, fired from a heavy gun, which burst through one of her portholes, and scattered men bleeding and mangled in every direction over the gundeck. She withdrew a short distance for repairs, but soon returned, and continued the fire the remainder of the day. When evening fell, she had sent one hundred and eighty shells at the fort, with the result of killing one man. This was not promising.

The next day the attack was taken up by all the gunboats. The distance chosen this time was four hundred yards, and the fight was kept up most stubbornly. It was St. Valentine's Day; and as the swarthy sailors, stripped to the waist, begrimed with powder, and stained with blood, rammed huge iron balls down the muzzles of the guns, they said with grim pleasantry, "There's a valentine for the gray-coats." And right speedily did the gray-coats return the gift. Shot and shell from the batteries came in volleys against the sides of the gunboats. In the fort the condition of affairs was not serious. The shells chiefly fell in the soft earth of the hilltop above, and embedded themselves harmlessly in the mud. One of the gunners after the fight said: "We were more bothered by flying mud than any thing else. A shell bursting up there would throw out great clots of clay, that blocked up the touch-holes of our guns, spoiled the priming of our shells, and plastered up the faces of our men.

Of course, now and then a bit of shell would knock some poor fellow over ; but, though we were all green hands at war, we expected to see lots more blood and carnage than the Yankee gunboats dealt out to us."

The gunboats, however, had put themselves in a hot place. Twenty heavy guns on the hillside high above were hurling solid shot down on the little fleet. The sailors stuck to their work well ; and though the vessels were in a fair way of being riddled, they succeeded in driving the enemy from his lower battery. But the upper battery was impregnable ; and the gunners there, having got the correct range, were shooting with unpleasant precision. Two of the vessels were disabled by being struck in the steering-chains. On the "Carondelet" a piece burst, hurling its crew bleeding on the deck. No vessel escaped with less than twenty wounds, while the flag-ship was hit fifty-nine times. Commodore Foote was wounded in the foot by a heavy splinter ; a wound from which he never fully recovered, and which for some years debarred him from service afloat.

That afternoon's bombardment showed clearly that Fort Donelson could never be taken by the navy. When Foote ordered his gunboats to cease firing and drop back out of position, the Confederates swarmed back into the lower battery that they had abandoned ; and, after a few hours' work, the fort was as strong as before the fight. It was the first case in the history of the war in which the navy had failed to reduce the fortifications against which it had been ordered. The Hatteras forts, the works at Roanoke Island and at Hilton Head, Fort Henry—all had fallen before the cannon of the Union sailors ; and Foote may well be pardoned if he yielded to Gen. Grant with great reluctance the honor of reducing Fort Donelson. For two days Grant's army invested the fort, and kept up a constant cannonade ; then the defenders, despairing of escape, and seeing no use of further prolonging the defence, surrendered.

The capture of Fort Donelson was an important success for the Union arms. In addition to the large number of prisoners, and the great quantity of munitions of war captured, the destruction of the fort left the Cumberland River open to the passage of the Union gunboats, and the Confederate battle-line was moved back yet another point. But now was to come a most heroic test of the power of the river-navy and the army of the North.

Some sixty miles below Cairo, the rushing, tawny current of the mighty

Mississippi turns suddenly northward, sweeping back, apparently, toward its source, in a great bend eight or ten miles long. At the point where the swift current sweeps around the bend, is a low-lying island, about a mile long and half a mile wide. This is known as Island No. 10; and at the opening of the war, it was supposed to hold the key to the navigation of the Mississippi River. Here the Confederates had thrown up powerful earthworks, the heavy guns in which effectually commanded the river, both up and down stream. The works were protected against a land bombardment by the fact that the only tenable bit of land, New Madrid, was held by Confederate troops. The shores of the Mississippi about Island No. 10 present the dreariest appearance imaginable. The Missouri shore is low and swampy. In 1811 an earthquake-shock rent the land asunder. Great tracts were sunk beneath the water-level of the river. Trees were thrown down, and lie rotting in the black and miasmatic water. Other portions of the land were thrown up, rugged, and covered with rank vegetation, making hills that serve only as places of refuge for water-moccasins and other noxious reptiles. Around this dreary waste of mud and water, the river rushes in an abrupt bend, making a peninsula ten miles long and three wide. Below this peninsula is New Madrid, a little village in the least settled part of Missouri; here the Confederates had established an army-post, and thrown up strong intrenchments. It was not, however, upon the intrenchments that they relied, but rather upon the impassable morasses by which they were surrounded on every side. In New Madrid were posted five or six thousand men; a small fleet of Confederate gunboats lay in the stream off the village; and higher up the river was Island No. 10, with its frowning bastions and rows of heavy siege-guns, prepared to beat back all advances of the Union troops.

In planning for the attack of this stronghold, the first difficulty found by Commodore Foote lay in the fact that his gunboats were above the batteries. In fighting down stream in that manner, the ships must be kept at long range: for, should a shot from the enemy injure the engine or boiler of a gunboat, the vessel is doomed; for the rapid current will rush her down under the enemy's guns, and her capture is certain. But the peril of running the batteries so as to carry on the fight from below seemed too great to be ventured upon; and besides, even with Island No. 10 passed, there would still be the batteries of New Madrid to cope with, and

the gunboats of the Confederates to take the ships in the rear. So it was determined that the navy should begin a bombardment of the Confederate works, while the army under Gen. Pope should attend to New Madrid. Accordingly, on March 15, the whiz of a rifled shell from the flag-ship, "Benton" announced to the Confederates that the North wanted the Mississippi opened for travel.

In this engagement use was made for the first time of a new style of vessel known as mortar-boats, which in later conflicts on the rivers did great service. These boats were simple floats, heavily built, and calculated to stand the most terrible shocks. On the float was raised a sort of sheet-iron fort or wall, about five feet high; and in the centre stood one thirteen-inch mortar. The mortar is the earliest of all forms of cannon, and was in use in Europe in 1435. Its name is derived from its resemblance to an ordinary druggist's mortar. The great thirteen-inch mortars used in the civil war weighed seventeen thousand pounds, and threw a shell thirteen inches in diameter. These shells were so heavy that it took two men to bring them up to the cannon's mouth. In the river-service, the mortar-boats were moored to the bank, and a derrick was set up in such a position that the shells could be hoisted up, and let fall into the yawning iron pot below. Foote had fourteen of these monsters pounding away at the Confederates, and the roar was deafening.

A correspondent of the "Chicago Times," who was with the fleet at the time of the bombardment, thus describes the manner of using these immense cannon: "The operation of firing the mortars, which was conducted when we were near by, is rather stunning. The charge is from fifteen to twenty-two pounds. The shell weighs two hundred and thirty pounds. For a familiar illustration, it is about the size of a large soup-plate. So your readers may imagine, when they sit down to dinner, the emotions they would experience if they happened to see a ball of iron of those dimensions coming toward them at the rate of a thousand miles a minute. The boat is moored alongside the shore, so as to withstand the shock firmly, and the men go ashore when the mortar is fired. A pull of the string does the work, and the whole vicinity is shaken with the concussion. The report is deafening, and the most enthusiastic person gets enough of it with two or three discharges. There is no sound from the shell at this point of observation, and no indication to mark the course it is taking; but in a few

seconds the attentive observer with a good glass will see the cloud of smoke that follows its explosion, and then the report comes back with a dull boom. If it has done execution, the enemy may be seen carrying off their killed and wounded."

And so from mortar-boats and gunboats, the iron hail was poured upon the little island, but without effect. When Foote with his flotilla first opened fire, he thought that the Confederate works would be swept away in a day or two. His ordnance was the heaviest ever seen on the Mississippi, and in number his guns were enough to have battered down a mountain. But his days grew to weeks, and still the flag of the Confederacy floated above Island No. 10. The men on the mortar-boats were giving way under the tremendous shocks of the explosions. Many were rendered deaf for days at a time. The jar of the explosions brought to the surface of the river hundreds of old logs and roots that had lain rotting in the soft ooze of the bottom. When all the mortars were engaged, the surface of the river was covered with foam and bubbles; and men by the thousand went about with their ears stuffed with tow, to protect them against the sound. Yet, after weeks of such firing, Gen. Beauregard telegraphed to Richmond, that the Yankees had "thrown three thousand shells, and burned fifty tons of gunpowder," without injuring his batteries in the least.

The Confederates remained passive in their trenches. They had no guns that would carry far enough to reply to Foote's mortars, and they did not wish to waste powder. It was galling to stand fire without replying; but, fortunately for them, the fire was not very deadly, and but few were injured. When, however, a shell did fall within the works, it made work enough to repair damages, as by its explosion a hole as large as a small house would be torn in the ground. But for every one that fell within the batteries, twenty fell outside. Some strange freaks are recorded of the shells. One fell on a cannon, around which eight or ten men were lying. The gun-carriage was blown to pieces, but not a man was hurt. Another fell full on the head of a man who was walking about distributing rations, and not so much as a button from his uniform was ever found.

But while the navy was thus playing at bowls with great guns, the army had marched through the interior, captured New Madrid, and obtained a foothold below Island No. 10. Thus the Confederates were surrounded; and the very impassability of the land, that had been an

advantage to them, now told against them, for it cut off all hope of re-enforcements. Gen. Pope's position was such that he could not get at the island, nor secure a commanding position, without aid from the navy. He begged Foote to try to run the batteries; but the commodore replied, that the risk was greater than the prospective gain, and continued his cannonade. Then a new idea was broached. By cutting a canal through the bayous, swamps, and woods of the peninsula, the lighter vessels could be taken by the fort without risk, and Foote would then dare the dangers of a dash by in the gunboats. Every one said that such a canal was impossible; but the men of the North were given to doing impossible things in those days, and while Foote's mortar-boats continued their thunder, fifteen hundred men were set to work cutting a way through the noisome swamps. A channel forty feet wide must be made. First gangs of men with axes and saws, working in three feet of water, went ahead, cutting down the rank vegetation. As fast as a little space was cleared, a small steamer went in, and with dredge and steam-capstan hauled out the obstructions. In some places the surveyed channel was so filled with drift-wood, fallen trees, and tangled roots, that the labor of a thousand men for a day seemed to make no impression. When the canal was pretty well blocked out, the levee was cut; and the rush of the waters from the great river undermined trees, and piled up new obstacles for the steamers to tow away. Amid the foulest vapors the men worked, and more than a thousand were sent to the hospital with chills and fever, and rheumatism. The most venomous snakes lurked in the dark recesses of the swamp; on cypress-stumps or floating logs the deadly water-moccason lay stretched out, ready to bite without warning. Wherever there was a bit of dry ground, the workers were sure to hear the rattle of the rattlesnake. Sometimes whole nests of these reptiles would be uncovered.

The work was continued day and night. When the failing daylight ceased to make its way through the thickly intertwined branches of trees and climbing vines, great torches would be lighted, and by their fitful glare the soldiers and sailors worked on in the water and mud. The light glared from the furnaces of the steamers, lighting up the half-naked forms of the stokers. Now and then some dry vine or tree would catch a spark from a torch, and in an instant would be transformed into a pillar of fire. After eight days of work the canal was finished, and was found to be of

sufficient depth for the passage of the transports. And now Commodore Foote saw that the time had come when he must attempt to run his gunboats past the forts, be the danger what it might.

On April 1, Foote ordered a reconnoissance of the batteries, and this order evoked one of the most daring deeds in the history of the war. The night was pitchy dark, and heavy clouds were driven across the sky by a strong, damp wind, that told of a coming storm. In five boats a party of fifty sailors and fifty soldiers put off from the fleet, prepared to go down and beard the Confederate lion in his den. Hardly had they started on their perilous expedition, when the rain began falling in sheets, and now and again flashes of lightning made the dark shores visible for an instant, then the black night hid every thing again from view. It was midnight, and the fierceness of the wind added to the terror of the moment. On the banks, the great forest-trees were bending and groaning before the blast, while the broad surface of the river was lashed into foaming billows. Under cover of the darkness the little band passed rapidly down the river; past the shore-batteries and past the Confederate picket-boats, they sped unseen. When they were within a few feet of the shore, a flash of lightning revealed them for just an instant to the sentries. Then all was black, save for the quick flashes of the sentries' guns as they gave the alarm and fell back. The Federals landed rapidly, and drove the confused Confederates from the battery. Then began the work of spiking the guns. Every fifth man carried a number of rat-tail files, which were to be driven into the vents of the cannon, and then broken off. While the raiders were engaged in this work, the Confederates rallied, and soon drove back the blue-jackets to their boats, with a slight loss in killed and captured. How many guns they had disabled, it is hard to say. In the excitement and glory of successful adventure, the reports were much exaggerated. Histories of that date depict the men as calmly spiking *every* gun, and then retiring deliberately. One writer claims that only one gun was spiked. However, testimony from Confederates on duty in the batteries goes to show that four guns were totally disabled. But the true value of the adventure to the Union forces was the dash and valor it disclosed, and the encouragement the people received from its success.

The next day after this successful exploit, a gunboat, the "Carondelet," was made ready to try the dash past the batteries of Island No. 10.

Again the weather was favorable to the plans of the Federals, for the night was as dark and wild as the one before. The day had been clear, and the night opened with so bright a moon that for a time it was thought that the project would have to be abandoned; but toward ten o'clock a heavy thunder-storm came up, and soon the black sky, the wildly waving tree-tops, and the sheets of rain scudding across the river, gave promise of a suitable night.

All day the sailors on the "Carondelet" had been working busily, getting their vessel in trim for the trip. Heavy planks were laid along the deck, to ward off plunging shot. Chain cables were coiled about all weak points, cord-wood was piled around the boilers, and the pilot-house was wrapped round and about with heavy hawsers. On the side toward the battery was tied a large barge, piled high with cotton-bales. When the time for starting drew nigh, all lights were extinguished. The guns were run in, and the ports closed. The sailors, heavily armed, were sent to their stations. Muskets, revolvers, and sabres were in the racks. Down in the boiler-room the stokers were throwing coal upon the roaring fires; and in the engine-room the engineer stood with his hand on the throttle, waiting for the signal to get under way.

Towards eleven o'clock the time seemed propitious for starting. The storm was at its height, and the roll of the thunder would drown the beat of the steamer's paddles. The word was given; and the "Carondelet," with her two protecting barges, passed out of sight of the flotilla, and down towards the cannon of the enemy. For the first half-mile all went well. The vessel sped along silently and unseen. The men on the gun-deck, unable to see about, sat breathlessly, expecting that at any moment a cannon-ball might come crashing through the side into their midst. Suddenly from the towering smoke-stacks, burst out sheets of flame five feet high, caused by the burning soot inside, and lighting up the river all about. Quickly extinguished, they quickly broke out again; and now from the camp of the alarmed enemy came the roll of the drum, and the ringing notes of the bugle sounding the alarm. A gunboat was bearing down on the works, and the Confederates sprang to their guns with a will. The men on the "Carondelet" knew what to expect, and soon it came. Five signal rockets rushed up into the sky, and in an instant thereafter came the roar of a great gun from one of the batteries. Then all joined in, and the din became

terrible. With volley after volley the Confederates hurled cannon-balls, shells, musket, and even pistol-bullets at the flying ship, that could only be seen an instant at a time by the fitful flashes of the lightning. On the "Carondelet" all was still as death. The men knew the deadly peril they were in, and realized how impossible it was for them to make any fight. In the black night, threading the crooked and ever-changing channel of the Mississippi River, it was impossible to go more than half-speed. In the bow men were stationed casting the lead, and calling out the soundings to the brave old Capt. Hoel, who stood on the upper deck unprotected from the storm of bullets, and repeated the soundings to Capt. Walker. So through the darkness, through the storm of shot and shell, the "Carondelet" kept on her way. Past the land-batteries, past the rows of cannon on the island, and past the formidable floating battery, she swept uninjured. Heavy and continuous as was the fire of the Confederates, it was mainly without aim. The hay-barge was hit three times, but not a scar was on the gunboat when she stopped before the water-front of New Madrid after twenty minutes' run through that dreadful fire.

And now the roar of the great guns had died away, and the men on the vessels of the flotilla up the river were all anxiety to know what had been the fate of their gallant comrades on the "Carondelet." All the time the battle raged, the decks of the ships at anchor were crowded with sailors looking eagerly down the river, and trying to make out by the blinding flashes of the cannon the dark form of a gunboat speeding by the hostile camp. Now all is silent; the roar of battle is over, the flash of gunpowder no more lights up the night. But what has become of the gallant men who braved that tempest of steel and iron? Are they floating down the troubled waters beneath the wreck of their vessel? It was a moment of suspense. After a few minutes' silence, there comes through the strangely quiet air the deep boom of a heavy gun. It had been agreed, that, if the "Carondelet" made the passage of the batteries safely, she should fire six heavy guns. The old tars on the decks say softly to themselves, "One." Then comes another, and a third, and still more, until suddenly a ringing cheer goes up from the flotilla, louder than the thunder itself. Men dance for joy; grizzled tars fall into each other's arms, sing, shout, cry. An answering salute goes booming back, rockets scud up into the clouds; and Commodore Foote, with a heart too full for talking, goes down into his cabin to be alone.

That night's work by the "Carondelet" terminated Confederate domain on Island No. 10. The next night another gunboat came down, and the two set to work carrying the troops across the river, protecting artillerymen engaged in erecting batteries, and generally completing the investment of the island. In two days every loop-hole of escape for the Confederates is closed, — gunboats above and below them, batteries peering down from every bluff, and regiments of infantry, all prepared to move upon the works. They made one or two ineffectual but plucky attempts to ward off capture. One private soldier swam ashore, skulked past the Union pickets, and made his way to one of the Union mortar-boats. He succeeded in getting to the mortar, and successfully spiked it, thus terminating its usefulness. A second Confederate succeeded in reaching the deck of the mortar-boat, but while making his way across the deck tripped and fell. The rat-tail file he was carrying was driven into his side, making a wound from which he died in two hours. A third man, reckless of life, set out in a canoe to blow up a gunboat. He carried with him a fifty-pound keg of gunpowder, which he proposed to strap on the rudder-post of the vessel. He succeeded in getting under the stern of the vessel; but the gleam of his lighted match alarmed the sentry, who fired, hitting him in the shoulder. The Confederate went overboard, and managed to get ashore; while his keg of powder, with the fuse lighted, went drifting down stream. Soon it exploded, throwing up an immense column of water, and showing that it would have sent the stoutest vessel to the bottom had it been properly placed.

But such struggles as these could not long avert the impending disaster. The Confederates were hemmed in on every side. It was true that they had a strong position, and could make a desperate resistance; but they were separated from their friends, and their final downfall was but a question of time. Appreciating this fact, they surrendered two days after the "Carondelet" had passed the batteries; and Foote made his second step (this time one of sixty miles) toward the conquest of the Mississippi.

To-day nothing remains of the once extensive island, save a small sand-bank in the middle of the great river. The rushing current of the Father of Waters has done its work, and Island No. 10 is now a mere tradition.

CHAPTER XI.

FAMOUS CONFEDERATE PRIVATEERS,—THE "ALABAMA," THE "SHENANDOAH," THE
"NASHVILLE."

LET us now desert, for a time, the progress of the Union forces down the Mississippi River, and turn our attention toward the true home of the sailors,—the blue waters of the ocean. We have heard much, from many sources, of the exploits of the Confederate commerce-destroyers, privateers, or, as the Union authorities and the historians of the war period loved to call them, the "Rebel pirates." In the course of this narrative we have already dealt with the career of the "Sumter," one of the earliest of these vessels. A glance at the career of the most famous of all the Confederate cruisers, the "Alabama," will be interesting.

This vessel was built in England, ostensibly as a merchant-vessel, although her heavy decks and sides, and her small hatchways, might have warned the English officials that she was intended for purposes of war. Before she was finished, however, the customs-house people began to suspect her character; and goaded on by the frequent complaints of the United States minister, that a war-vessel was being built for the Confederates, they determined to seize her. But customs-house officials do things slowly; and, while they were getting ready for the seizure, Capt. Semmes, who had

ENGAGEMENT OF THE "KEARSARGE" AND "ALABAMA," JUNE 19, 1864

taken command of the new ship, duped them, and got his vessel safely out of English waters. Private detectives and long-shore customs officers had been visiting the ship daily on visits of examination; but, by the aid of champagne and jolly good-fellowship, their inexperienced eyes were easily blinded to the manifest preparations for a war-like cruise. But finally came a retired naval officer who was not to be humbugged. A sailor on board thus tells the story of his visit: "He was evidently a naval officer, alert and resolute, and soon silenced the officer's explanations. He looked at the hatchways, shot-racks, and magazines; and, surveying the hammock-hooks on the berth-deck, said, 'You'll have a large crew for a merchant-steamer.' We had taken on board some heavy oak plank, that lay on the main deck; the officer remarked that they were for anchor-stocks, and was shortly answered, 'Wouldn't make bad gun-platforms, sir,' which, indeed, was just what they were intended for. With a 'Good-morning, sir,' our visitor mounted the side and was gone." This visit alarmed the Confederates; and immediate preparations were made to run the ship, which still went by the name of the "No. 290," out of the British waters the next day. To disarm suspicion, a large party of ladies and gentlemen were invited aboard; and the ship started down the Mersey, ostensibly on her trial trip, with the sounds of music and popping corks ringing from her decks. But peaceful and merry as the start seemed, it was the beginning of a voyage that was destined to bring ruin to hundreds of American merchants, and leave many a good United States vessel a smoking ruin on the breast of the ocean. When she was a short distance down the river, two tugs were seen putting off from the shore; and in a moment the astonished guests were requested to leave the ship, and betake themselves homeward in the tugs. It is unnecessary to follow the voyage of the "No. 290" to Nassau, and detail the way in which cannon, ammunition, and naval stores were sent out from Portsmouth in a second vessel, and transferred to her just outside of Nassau. It is enough to say that on a bright, clear Sunday morning, in the latter part of August, 1862, Capt. Rafael Semmes, late of the Confederate cruiser "Sumter," a gentleman of middle height, wearing a uniform of gray and gold, his dark mustache waxed to such sharp points that one would think him a Frenchman rather than a Southerner, stood on the quarter-deck of the "No. 290," with his crew mustered before him, reading out his commission

from Jefferson Davis, as commander of the Confederate States' steam-sloop "Alabama." As he read, an old master's-mate, standing at the peak-halyards, begins pulling at the ropes. The British ensign, carried through the ship's anonymous days, comes fluttering down, and in its place runs up the white naval ensign of the Confederacy, with the starry Southern cross in the red field of the corner. Then the reading is ended. Boom! goes the starboard fore-castle-gun. The band bursts forth with the stirring notes of Dixie; and the sailors, after three ringing cheers, crowd forward to wait for further developments. Soon the sailors are summoned aft again, and Capt. Semmes addresses them. He tells them that, as the "Alabama" is to be a ship-of-war, they are released from their shipping contracts, but are invited to ship under the new plan. He briefly details the purpose of the cruise. The "Alabama" is to be a bird of passage, flitting from port to port, and hovering about the highways of travel, to lie in wait for the merchant-vessels of the North. Armed vessels she will avoid as much as possible, confining her warfare to the helpless merchantmen. It is hardly a glorious programme, but it seems to bear the promise of prize-money; and before the day is over Capt. Semmes has shipped a crew of eighty men, and with these the "Alabama" begins her cruise. The remainder of the sailors are sent ashore, and the "Alabama" starts off under sail, in search of her first capture.

Let us look for a moment at this vessel, perhaps the most famous of all cruisers. She was a fast screw-steamer, of a little more than a thousand tons' burden. Her screw was so arranged that it could be hoisted out of the water; and, as the saving of coal was a matter of necessity, the "Alabama" did most of her cruising under sail. Her hull was of wood, with no iron plating, and her battery consisted of but eight light guns; two facts which made it necessary that she should avoid any conflicts with the powerful ships of the United States navy. Her lines were beautifully fine; and, as she sped swiftly through the water, Capt. Semmes felt that his vessel could escape the Northern cruisers as easily as she could overhaul the lumbering merchantmen. The crew was a turbulent one, picked up in the streets of Liverpool, and made up of men of all nationalities. Terrific rows would arise in the fore-castle, and differences between the sailors were often settled by square stand-up fights. The petty officers seldom interfered; one old boatswain remarking, when he heard the noise

of blows in the forecabin, "Blast them, let 'em slug one another's heads off; it will keep 'em out of mischief." And it generally did, for the combatants were usually fast friends the next day.

As soon as the new ship was cleaned up, and put in order, drill began. The men were all green; and hard, steady work at the guns, and with the cutlasses, was necessary to fit them for service. The decks resounded with "right," "left," "head protect," "right overcut." The men were slow in learning; but the officers were Southerners, devoted to their cause, and were tireless in getting the crew into shape.

After several days of cruising and drill, a vessel was sighted which was unmistakably American. One of the sailors tells the story of her capture graphically. "On the morning of the 5th of September the cry of 'ship ahoy!' from the masthead brought all hands on deck. Sure enough, about two miles to the leeward of us was a fine barque, at once pronounced a 'spouter' (whaler), and an American. In order to save coal,—of which very essential article we had about three hundred tons aboard,—we never used our screw unless absolutely necessary. We were on the starboard tack, and with the fresh breeze soon came alongside. We had the American flag set, and the chase showed the stars and stripes. A gun was fired; and, as we came within hail, we gave the order, 'Back your mainsail; I'll send a boat on board of you.'

"'Cutter away,' and the boat came down from the davits, and we pulled for our first prize. It soon became a vain thing, and tiresome; but this our first essay was a novelty, and we made the stretches buckle with our impatience to get aboard. The bowman hooked on to the chains, and we went up the side like cats. When we got aft, the captain asked in a dazed sort of manner, 'Why—why—what does this mean?' The master, Fullam, replied, 'You are prize to the Confederate steamer "Alabama," Capt. Semmes commanding. I'll trouble you for your papers.' Now, this man had been four years out, and had no doubt heard of the trouble at home; but he couldn't realize this, and he stared, and said, 'Confederate government—Alabama—why, that's a State,' and then was sternly told to get his papers. We were ordered to put the crew in irons, and they, too, seemed utterly dumbfounded; and one poor fellow said to me, 'Must I lose all my clothes?' I answered, 'Yes,' but advised him to put on all he could, and if he had any money to slip it in his boot. 'Money! I haint seen a dollar for three years; but I'm obliged to ye all the same.'"

Then, after searching the vessel for valuables, the captives were taken back to the "Alabama," while one boat's-crew remained behind to fire the vessel.

"She was loaded with oil," writes sailor Haywood; "and, when it caught, a high column of dense black smoke poured out of the hatchways, and spread in vast involutions to the leeward. Soon the red forked flames began to climb her masts, and her spars glowed with light; with a crash her mainmast fell, carrying the foremast with it, and sending a shower of sparks high in the air; her stout sides seemed to burst open; and what was a stately ship was now a blackened hulk, the rising sea breaking in white-caps over it, and at last, with a surge and wallow, sinking out of sight." Alone, by one of the lee-ports, the ruined American captain stood, looking sadly upon the end of all his long four years' labor. For this he had borne the icy hardships of the Arctic seas. The long, dreary four years of separation from wife and home had been lightened by the thought, that by a prosperous voyage he might bring home enough money to stay always in the little shingled cottage in the narrow street of some New England fishing-village; but now all that was over. When he should arrive home he would be penniless, with nothing but the clothes on his back, and all because of a war of the very existence of which he knew nothing. It was hard to bear, but war brings nothing but affliction.

After this capture, the "Alabama" had a lively season for several weeks, capturing often two or three vessels a day. Generally they met with no resistance; but occasionally the blood of some old sea-dog would boil, and he would do the best in his power to injure his captors. A story of one such incident was thus told by one of the "Alabama's" crew:—

"When we ran around in search of whalers, we came upon a Yankee skipper who didn't know what surrender meant. We were just well to the west of the stormy cape, when one morning after breakfast we raised a whaler. He was headed up the coast, and about noon we overhauled him. He paid no attention to the first shot, and it was only when the second one hulled him that he came into the wind. It was then seen that he had fifteen or sixteen men aboard, and that all were armed with muskets, and meant to defend the ship. The lieutenant was sent off with his boat; but no sooner was he within fair musket-range, than the whaler opened on him, killing one man, and wounding two, at the first volley. The officer pushed ahead, and

demanded a surrender; but he got another volley, and the reply that the whaler 'would go to the bottom before he would surrender to a Rebel!'

"The boat was recalled, and our gunners were instructed to hull the whaler with solid shot. We approached him within rifle-range, and opened fire. Every one of the balls plumped through his side at and above the water-line, and he answered with his muskets, severely wounding two men. He was repeatedly hailed to surrender, but in reply he encouraged his men to maintain their fire. We soon had the sea pouring into his starboard side through a dozen holes; and when it was seen that he would soon go down, we ceased firing, and again demanded his surrender. I can remember just how he looked as he sprang upon the rail, — tall, gaunt, hair flying, and eyes blazing, — and shouted in reply, —

"'The 'Ben Scott' don't surrender! Come and take us — if you can.'

"Five minutes later his craft settled down, bow first. We lowered the boats to save his crew, and, strangely enough, not a man was lost. When we brought them aboard, the Yankee skipper waked up to Semmes, bareheaded, barefooted, and coatless, and said, —

"'If I'd only have had one old cannon aboard, we'd have licked ye out of yer butes! Here we are, and what are ye going to do with us?'

"He was voted a jolly good fellow, and the crew were better treated than any other ever forced aboard. In order to give them their liberty, the very next capture we made was bonded, and they were put aboard to sail for home."

But now the decks of the "Alabama" were getting rather uncomfortably crowded with prisoners, and it became necessary to put into some port where they could be landed. Accordingly the ship was headed for Martinique, and soon lay anchored in the harbor of that place, where she began coaling. While she lay there, a Yankee schooner put into the port, and was about to drop anchor near the dangerous cruiser, when some one gave the skipper a hint; and, with a startled "b'gosh," he got his sails up, and scudded out to sea. The "Alabama" lay in port some days. The first set of the sailors who received permission to go ashore proceeded to get drunk, and raised so great a disturbance, that thereafter they were obliged to look on the tropical prospect from the deck of the vessel. The next day a United States war-vessel was seen standing into the harbor, and Capt. Semmes immediately began to make preparations to fight her

But as she came nearer she proved to be the "San Jacinto," a vessel mounting fourteen heavy guns, and altogether too powerful for the "Alabama." So thinking discretion the better part of valor, the Confederate ship remained safe in the neutral harbor. The "San Jacinto" quietly remained outside, thinking that at last the fox was caught. But that same night, with all lights extinguished, and running under full steam, the "Alabama" slipped right under the broadside of her enemy, getting clean away, so quietly that the "San Jacinto" remained for four days guarding the empty trap, while the "Alabama" was off again on another voyage of destruction, and the tuneful souls in the forecastle were roaring out the chorus, —

"Oh, our jolly privateer
Has left old England's shore!
Lord, send us lots of prizes,
But no Yankee man-of-war."

Soon after leaving Martinique, the "Alabama" made a capture which embarrassed the captain not a little by its size. It was Sunday (which Capt. Semmes calls in his journal "the 'Alabama's' lucky day"), when a bit of smoke was seen far off on the horizon, foretelling the approach of a steamer. Now was the time for a big haul; and the "Alabama's" canvas was furled, and her steam-gear put in running order. The two vessels approached each other rapidly; and soon the stranger came near enough for those on the "Alabama" to make out her huge walking-beam, seeing up and down amidships. The bright colors of ladies' dresses were visible; and some stacks of muskets, and groups of blue-uniformed men, forward, told of the presence of troops. The "Alabama" came up swiftly, her men at the guns, and the United States flag flying from the peak, — a rather dishonorable ruse habitually practised by Capt. Semmes. In a moment the stranger showed the stars and stripes, and then the "Alabama" ran up the white ensign of the Confederacy, and fired a blank cartridge. But the stranger had no thought of surrendering, and crowded on all steam and fled. The "Alabama" was no match for her in speed, so a more peremptory summons was sent in the shape of a shell that cut the steamer's foremast in two. This hint was sufficient. The huge paddles ceased revolving, and a boat's-crew from the "Alabama" went aboard to take possession. The prize proved to be the mail steamer "Ariel" with

five hundred passengers, besides a hundred and forty marines and a number of army and navy officers. Now Capt. Semmes had an elephant on his hands, and what to do with that immense number of people he could not imagine. Clearly the steamer could not be burned like other captures. For two days Capt. Semmes kept the prize near him, debating what was to be done, and then released her; exacting from all the military and naval officers their paroles that they would not take up arms against the Confederacy.

After this exploit the "Alabama" went into port for a few days, and then headed into the Gulf of Mexico. Here she steamed about, capturing and burning a few United States merchantmen, until on the 11th of January she found herself off the port of Galveston, where a strong blockading fleet was stationed. And here she fought her first battle.

About four o'clock of a clear afternoon, the lookout in the cross trees of the United States sloop-of-war "Hatteras," stationed off the port of Galveston, hailed the officer of the deck, and reported a steamer standing up and down outside. The stranger was watched closely through marine glasses, and finally decided to be a blockade-runner trying to make the port; and the "Hatteras" immediately set out in pursuit. This was just what Capt. Semmes desired. He knew that the ships stationed off Galveston were not heavily armed, and he felt sure that if he could entice one away from the rest of the fleet he would be able to send her to the bottom. Accordingly he steamed away slowly, letting the "Hatteras" gain on him, but at the same time drawing her out of the reach of any aid from her consorts. When about twenty miles away from the fleet, the "Alabama" slowed down and finally stopped altogether, waiting for the "Hatteras" to come up. The latter vessel came within two hundred yards, and hailed, "What ship's that?"—"Her Majesty's ship 'Petrel,'" answered Semmes, pursuing the course of deception that brings so much discredit on his otherwise dashing career. The captain of the "Hatteras" answered that he would send a boat aboard; but, before the boat touched the water, a second hail announced, "We are the Confederate ship 'Alabama,'" and in an instant a heavy broadside crashed into the "Hatteras." Every one of the shots took effect; and one big fellow from the one hundred and five pounder rifle peeled off six feet of iron plating from the side of the "Hatteras," and lodged in the hold. Dazed by this unexpected fire, but plucky as ever, the

blue-jackets sprang to their guns and returned the fire. The two ships were so close together that a good shot with a revolver could have picked off his man every time, and the sailors hurled taunts at each other between the volleys. Not a shot missed the "Hatteras;" in five minutes she was riddled with holes, and on fire, and a minute or two later the engineer came up coolly and reported, "Engine's disabled, sir;" followed quickly by the carpenter, who remarked, "Ship's making water fast; can't float more than ten minutes, sir." There was nothing for it but surrender, and the flag came down amid frantic yells from the "Alabama" sailors. Semmes got out his boats with wonderful rapidity, and picked up all the men on the "Hatteras;" and the defeated vessel sank in ten minutes. One of the strange things about this battle was the small number of men injured. Nothing but shells were fired, and they searched every part of the vessels; yet when the fight was over the "Alabama" had but one man wounded, while the "Hatteras" had two men killed and three wounded. The shells played some strange pranks in their course. One ripped up a long furrow in the deck of the "Alabama," and knocked two men high in the air without disabling them. Another struck a gun full in the mouth, tore off one side of it, and shoved it back ten feet, without injuring any of the crew. One man who was knocked overboard by the concussion was back again and serving his gun in two minutes. A shell exploded in the coal of the "Hatteras," and sent the stuff flying all about the vessel, without injuring a man.

With her prisoners stowed away in all available places about her decks, the "Alabama" headed for Jamaica, and cast anchor in the harbor of Port Royal. There were several English men-of-war there, and the officers of the victorious ship were lionized and feasted to their hearts' content. The prisoners were landed, the "Alabama's" wounds were bound up, and she was made ready for another cruise.

After five days in port, she set out again on her wanderings about the world. Week after week she patrolled the waters in all parts of the globe where ships were likely to be met. Sometimes she would go a fortnight without a capture, and then the men in the fore-castle would grow turbulent and restive under the long idleness. Every bit of brass-work was polished hour after hour, and the officers were at their wits' end to devise means for "teasing-time." The men made sword-knots and chafing-gear enough

to last the whole navy, and then looked longingly at the captain's mustache, as the only thing left in which a "Turk's head" could be tied. Music enlivened the hours for a time; but the fiddler was soon voted a bore, and silenced by some one pouring a pint of molasses into the *f*-holes of his instrument. The enraged musician completed the job by breaking it over the head of the joker. After several weeks, they put into Cape Town. Here the practical joker of the crew made himself famous by utterly routing an inquisitive old lady, who asked, "What do you do with your prisoners?" The grizzled old tar dropped his voice to a confidential whisper, and, with a look of the utmost frankness, replied, "We biles 'em, mum. We tried a roast, but there ain't a bounce of meat on one o' them Yankee carkages. Yes, mum, we biles 'em." The startled old lady gasped out, "Good lordy," and fled from the ship.

Putting out from Cape Town, the "Alabama" continued her weary round of cruising. Many vessels were captured, and most of them were burned. One Yankee captain proved too much for Semmes, as his story will show. His ship was chased by the "Alabama" in heavy weather all day, and occasionally fired upon. When the steamer was abeam, "she closed up with us," the captain says, "as near as safety would permit, and, hailing us, asked where we were bound, and demanded the surrender of the ship to the Confederate Government. I answered through my trumpet, 'Come and take me.' Conversation being too straining for the lungs amid the howling of the wind and rolling of the huge billows, and the proximity of the vessels too dangerous, we separated a little, and had recourse to blackboards to carry on our conversation. Semmes asked where we were bound. I answered, without a blush, 'Melbourne,' thinking that possibly he might try to intercept me if he knew that I was to pass through the Straits of Sunda. Then he had the cheek to order me to 'haul down your flag and surrender, escape or no escape,'—on a kind of parole, I suppose he meant. I wrote on the board: 'First capture, then parole.' This answer vexed him, I am sure, for he immediately wrote: 'Surrender, or I will sink you.' I wrote: 'That would be murder, not battle.'—'Call it what you will, I will do it,' he wrote. 'Attempt it, and by the living God, I will run you down, and we will sink together,' I wrote in reply. I knew his threat was vain; for in that heavy sea, rolling his rails under, he did not dare to free his guns, which were already double

ashed. They would have carried away their tackles, and gone through the bulwarks overboard. Conscious that he had made empty threats, we said no more, but doggedly kept on our course. Sail was still further reduced on both vessels, as the wind kept increasing and was now blowing a gale. We were now gradually and surely drawing ahead of the steamer. It was growing dark. Rejoicing at my fortunate escape, I gave the valiant Semmes a parting shot by hoisting the signal 'Good-by.' Dipping the star-spangled banner as a salute, I hauled it down, and the steamer was soon lost to sight in the darkness. . . . I never saw her after our escape; but, indirectly, she forced me to sell my ship in China soon after."

But we cannot follow the "Alabama" in her career about the world. A full account of her captures would fill volumes; and in this narrative we must pass hastily by the time that she spent scouring the ocean, dodging United States men-of-war, and burning Northern merchantmen, until, on the 11th of June, she entered the harbor of Cherbourg, France, and had hardly dropped anchor when the United States man-of-war "Kearsarge" appeared outside, and calmly settled down to wait for the Confederate to come out and fight. Capt. Semmes seemed perfectly ready for the conflict, and began getting his ship in shape for the battle. The men, too, said that they had had a "plum-pudding voyage" of it so far, and they were perfectly ready for a fight. The forecandle poet was set to work, and soon ground out a song, of which the refrain was, —

"We're homeward bound, we're homeward bound!
And soon shall stand on English ground;
But, ere our native land we see,
We first must fight the 'Kearsarge.'"

This was the last song made on board the "Alabama," and the poet was never more seen after the fight with the "Kearsarge."

The "Kearsarge" had hardly hove in sight when Capt. Semmes began taking in coal, and ordered the yards sent down from aloft, and the ship put in trim for action. Outside the breakwater, the "Kearsarge" was doing the same thing. In armament, the two vessels were nearly equal; the "Alabama" having eight guns to the "Kearsarge's" seven, but the guns of the latter vessel were heavier and of greater range. In the matter of speed, the "Kearsarge" had a slight advantage. The great advantage

RESCUE OF CAPT. SEMMES.

which the "Kearsarge" had was gained by the forethought of her commander, who had chains hung down her sides, protecting the boilers and machinery. Semmes might easily have done the same thing had the idea occurred to him.

It was on Sunday, June 19, that the "Alabama" started out to the duel that was to end in her destruction. Though Sunday was Capt. Semmes's lucky day, his luck this time seemed to have deserted him. The "Alabama" was accompanied in her outward voyage by a large French iron-clad frigate. The broad breakwater was black with people waiting to see the fight. The news had spread as far as Paris, and throngs had come down by special trains to view the great naval duel. A purple haze hung over the placid water, through which could be seen the "Kearsarge," with her colors flying defiantly, steaming slowly ahead, and ready for the "Alabama" to come up. Small steamers on every side followed the "Alabama," as near the scene of conflict as they dared. One English yacht, the "Deerhound," with her owner's family aboard, hung close to the combatants during the fight. No duel of the age of chivalry had a more eager throng of spectators.

Now the "Alabama" has passed the three-mile line, and is on the open sea. The big French iron-clad stops; the pilot-boats, with no liking for cannon-balls, stop too. The "Deerhound" goes out a mile or so farther, and the "Alabama" advances alone to meet the antagonist that is waiting quietly for her coming. The moment of conflict is at hand; and Capt. Semmes, mustering his men on the deck, addresses them briefly, and sends them to their quarters; and now, with guns shotted, and lanyards taut, and ready for the pull, the "Alabama" rushes toward her enemy. When within a distance of a mile, the first broadside was let fly, without avail. The "Kearsarge," more cool and prudent, waits yet awhile; and, when the first shot does go whizzing from her big Dahlgren guns, it strikes the "Alabama," and makes her quiver all over. Clearly it won't do to fight at long range; and Capt. Semmes determines to close in on his more powerful antagonist, and even try to carry her by boarding, as in the glorious days of Paul Jones. But the wary Winslow of the "Kearsarge" will have none of that; and he keeps his ship at a good distance, all the time pouring great shot into the sides of the "Alabama." Now the two vessels begin circling around each other in mighty circles, each trying to get in a raking position. The men on the "Alabama" began to find that

their gunpowder was bad and caky; while at the same moment one of the officers saw two big solid shot strike the "Kearsarge" amidships, and fall back into the water, revealing the heretofore unsuspected armor. This was discouraging. Then came a big shot that knocked over the pivot-gun, and killed half its crew. One sailor saw a shot come in a port, glide along the gun, and strike the man at the breach full in the breast, killing him instantly.

The "Kearsarge," too, was receiving some pretty heavy blows, but her iron armor protected her vulnerable parts. One shell lodged in her stern-post, but failed to explode. Had it burst, the "Kearsarge's" fighting would have been over.

After an hour the officers of the "Alabama" began coming to Capt. Semmes with grave faces, and reporting serious accidents. At last the first lieutenant reported the ship sinking, and the order was given to strike the flag. She was sinking rapidly, and the time had come for every man to save himself. The "Kearsarge" was shamefully slow in getting out her boats; and finally when the "Alabama," throwing her bow high in the air, went down with a rush, she carried most of her wounded with her, and left the living struggling in the water. Capt. Semmes was picked up by a boat from the yacht "Deerhound," and was carried in that craft to England away from capture. For so escaping, he has been harshly criticised by many people; but there seems to be no valid reason why he should refuse the opportunity so offered him. Certain it is, that, had he not reached the "Deerhound," he would have been drowned; for none of the boats of the "Kearsarge" were near him when he was struggling in the water.

So ended the career of the "Alabama." Her life had been a short one, and her career not the most glorious imaginable; but she had fulfilled the purpose for which she was intended. She had captured sixty-four merchant-vessels, kept a large number of men-of-war busy in chasing her from one end of the world to the other, and inflicted on American commerce an almost irreparable injury.

Although the "Alabama" was by all means the most noted and the most successful of all the Confederate cruisers, there were others that entered upon the career of privateering, and followed it for a while with varying degrees of success. Some were captured revenue-cutters, which the Confederates armed with a single heavy gun, and turned loose on the

ocean in search of Yankee schooners. Others were merely tugs or pilot-boats. Generally their careers were short. In one instance a fine privateer, from which the Confederates expected great things, attempted to capture a United States man-of-war, under the delusion that it was a merchant-vessel. The captain of the man-of-war saw the mistake under which the Confederate labored, and allowed the privateer to come up within short range, when, with a sudden broadside, he sent her to the bottom, abruptly terminating her career as a commerce destroyer. Some quite formidable iron-clad cruisers were built abroad; but in most cases all the diplomacy of the Confederate agents proved unavailing to prevent the confiscation of the ships by the neutral governments in whose territory they were built. Two iron-clad rams built at Liverpool, ostensibly for private parties, but really for the Confederate Government, were seized by the British authorities. Six splendid vessels were built in France, but only one succeeded in getting away to join the Confederate service. This one was a ram with armored sides, and was named the "Stonewall." The war was nearly over when she was put in commission, and her services for the Confederacy amounted to nothing. She made one short cruise, during which she fell in with two United States men-of-war, that avoided a fight with her on account of her superior strength. At the end of her cruise the war was over, and she was sold to the Mikado of Japan, whose flag she now carries.

The "Nashville" was an old side-wheel passenger-steamer, of which the Confederates had made a privateer. Her career was a short one. She made one trip to England as a blockade-runner, and on her return voyage she burned three or four United States merchantmen. She then put into the Great Ogeechee River, where she was blockaded by three Union men-of-war. The Confederates protected her by filling the river with torpedoes, and anchoring the ship at a point where the guns of a strong fort could beat back all assailants. Here she lay for several weeks, while the men on the blockaders were fuming at the thought that they were to be kept idle, like cats watching a rat-hole. At last Capt. Worden, who was there with his redoubtable monitor "Montauk," determined to destroy the privateer, despite the torpedoes and the big guns of the fort. He accordingly began a movement up the river, picking his way slowly through the obstructions. The fort began a lively cannonade; but Worden soon found that he had nothing to fear from that quarter, as the guns were not

heavy enough to injure the iron sides of the little monitor. But, as he went up the river, the "Nashville" took the alarm and fled before him; and it seemed that the most the Union fleet could do would be to keep her from coming down again, for with her light draught she could keep well out of range of the monitor's guns. But one morning Worden perceived a strange commotion on the "Nashville;" and, looking carefully through his glass, he saw that she was aground. Now was his time; and at once he pushed forward to a point twelve hundred yards from her, and directly under the guns of Fort MacAllister. From this point he began a deliberate fire upon the doomed privateer. The great guns of the fort were roaring away, and their shells came crashing against the sides of the "Montauk;" but to this Worden paid no heed. It was splendid long distance practice for his gunners; and, when they got the range, not a shot missed the stranded Confederate vessel. From his pilot-house Worden could see the crew of the "Nashville" escaping in boats, leaping into the water over the sides,—doing anything to escape from that terribly destructive fire. All the time the great fifteen-inch shells were dropping into the vessel with fearful precision. By and by a heavy fog fell upon the scene; but the gunners on the "Montauk" knew where their enemy was, and kept up their steady fire, though they could see nothing. When the fog lifted, they saw the "Nashville" a mass of flames; and in a moment she blew up, covering the placid surface of the river with blackened fragments. Then the "Montauk" returned to her consorts, well satisfied with her day's work.

The last of the Confederate privateers to ravage the ocean was the "Shenandoah," originally an English merchant-vessel engaged in the East India trade. She was large, fast, and strongly built; and the astute agent of the Confederacy knew, when he saw her lying in a Liverpool dock, that she was just calculated for a privateer. She was purchased by private parties, and set sail, carrying a large stock of coal and provisions, but no arms. By a strange coincidence, a second vessel left Liverpool the same day carrying several mysterious gentlemen, who afterwards proved to be Confederate naval officers. The cargo of this second vessel consisted almost entirely of remarkably heavy cases marked "machinery." The two vessels, once out of English waters, showed great fondness for each other, and proceeded together to a deserted, barren island near Madeira. Here they anchored side by side; and the mysterious gentlemen, now resplendent

THE "NASHVILLE" BURNING A PRIZE.

in the gray and gold uniform of the Confederacy, stepped aboard the "Shenandoah." Then the cases were hoisted out of the hold of the smaller vessel; and, when the "machinery" was mounted on the gun-deck of the "Shenandoah," it proved to be a number of very fine steel-rifled cannon. Then the crew was mustered on the gun-deck, and informed that they were manning the new Confederate ship "Shenandoah;" and with a cheer the flag was hoisted at the peak, and the newly created ship-of-war started off in search of merchantmen to make bonfires of. From Madeira the cruiser made for the Southern Ocean,—a fresh field not yet ravaged by any Confederate vessel. This made the hunting all the better for the "Shenandoah," and she burned vessels right and left merrily. In the spring of 1865, she put into the harbor of Melbourne, Australia, where her officers were lavishly entertained by the citizens. Thence she proceeded to the northward, spending some time in the Indian Ocean, and skirting the Asiatic coast, until she reached Behrings Straits. Here she lay in wait for returning whalers, who in that season were apt to congregate in Behrings Sea in great numbers, ready for the long voyage around Cape Horn to their home ports on the New England coast. Capt. Waddell was not disappointed in his expectations, for he reached the straits just as the returning whalers were coming out in a body. One day he captured eleven in a bunch. With one-third his crew standing at the guns ready to fire upon any vessel that should attempt to get up sail, Waddell kept the rest of his men rowing from ship to ship, taking off the crews. Finally all the prisoners were put aboard three of the whalers, and the eight empty ships were set afire. It was a grand spectacle. On every side were the towering icebergs, whose glassy sides reflected the lurid glare from the burning ships. Great black volumes of smoke arose from the blazing oil into the clear blue northern sky. The ruined men crowded upon the three whalers saw the fruits of their years of labor thus destroyed in an afternoon, and heaped curses upon the heads of the men who had thus robbed them. What wonder if, in the face of such apparently wanton destruction as this, they overlooked the niceties of the law of war, and called their captors pirates! Yet for the men of the "Shenandoah" it was no pleasant duty to thus cruise about the world, burning and destroying private property, and doing warfare only against unarmed people. More than one has left on record his complaint of the utter unpleasantness of the duty; but all felt that they were aiding the cause for

which their brothers at home were fighting, and so they went on in their work of destruction.

For two months more Waddell continued his depredations in the northern seas. Many a stout bark from New London or New Bedford fell a prey to his zeal for a cause that was even then lost. For the Confederacy had fallen. The last volley of the war had been discharged three months before. Of this Capt. Waddell was ignorant, and his warlike operations did not end until the captain of a British bark told him of the surrender of Lee and Johnston, and the end of the war. To continue his depredations longer would be piracy: so Capt. Waddell hauled down his Confederate flag, and heading for Liverpool surrendered his ship to the British authorities, by whom it was promptly transferred to the United States. So ended the last of the Confederate privateers.

CHAPTER XII.

WORK OF THE GULF SQUADRON.—THE FIGHT AT THE PASSES OF THE MISSISSIPPI.—
DESTRUCTION OF THE SCHOONER "JUDAH."—THE BLOCKADE OF GALVESTON, AND
CAPTURE OF THE "HARRIET LANE."

THE naval forces of the United States during the war may be roughly classified as the Atlantic fleets, the river navy, and the Gulf squadron. The vessels comprising the latter detachment enjoyed some light service during the opening months of the war; but, as the time went on, the blue-jackets of the Gulf squadron found that they had no reason to congratulate themselves on securing an easy berth. Their blockading duty was not so arduous as that of their brothers along the rugged Atlantic coast; but they were harassed continually by Confederate rams, which would make a dash into the fleet, strike heavy blows, and then fly up some convenient river far into the territory of the Confederacy. One such attack was made upon the squadron blockading the Mississippi in October, 1861.

Some eighty miles below New Orleans, the Mississippi divides into three great channels, which flow at wide angles from each other into the Gulf of Mexico. These streams flow between low marshy banks hardly higher than the muddy surface of the river, covered with thick growths of willows, and infested with reptiles and poisonous insects. The point from which these three streams diverge is known as the "Head of the Passes," and it was

here that the blockading squadron of four vessels was stationed. The ships swung idly at their moorings for weeks. The pestilential vapors from the surrounding marshes were rapidly putting all the crews in the sick bay, while the clouds of gnats and mosquitoes that hung about made Jack's life a wretched one. They did not even have the pleasurable excitement of occasionally chasing a blockade-runner, for the wary merchants of New Orleans knew that there was absolutely no hope of running a vessel out through a river so effectually blockaded. And so the sailors idled away their time, smoking, singing, dancing to the music of a doleful fiddle, boxing with home-made canvas gloves that left big spots of black and blue where they struck, and generally wishing that "Johnny Reb" would show himself so that they might have some excitement, even if it did cost a few lives.

But while the blue-jackets at the mouth of the river were spending their time thus idly, the people in the beleaguered city higher up were vastly enraged at being thus cooped up, and were laying plans to drive their jailers away. Occasionally they would take a small fleet of flat boats, bind them together, and heap them high with tar, pitch, and light wood. Then the whole would be towed down the river, set on fire, and drifted down upon the fleet. The light of the great fire could be seen far off, and the war-ships would get up steam and dodge the roaring mass of flames as it came surging down on the swift current. So many trials of this sort failed, that finally the people of the Crescent City gave up this plan in disgust.

Their next plan seemed for a time successful. It was at four o'clock one October morning that the watch on the sloop-of-war "Richmond" suddenly saw a huge dark mass so close to the ship that it seemed fairly to have sprung from the water, and sweeping down rapidly. The alarm was quickly given, and the crew beat to quarters. Over the water from the other ships, now fully alarmed, came the roll of the drums beating the men to their guns. The dark object came on swiftly, and the word was passed from man to man, "It's a Confederate ram." And indeed it was the ram "Manassas," which the Confederates had been hard at work building in the New Orleans ship-yards, and on which they relied to drive the blockading squadron from the river. As she came rushing towards the "Richmond," two great lights higher up the river told of fire-rafts bearing down upon the fleet, and by the fitful glare three smaller gun-boats were seen coming to the assistance of the "Manassas." Clearly the Confederates were attacking in force.

The first volley from the fleet rattled harmlessly from the iron-clad sides of the "Manassas;" and, not heeding it, she swept on and plunged into the side of the "Richmond." The great iron prow cut deep into the wooden sides of the Union vessel. Heavy oaken timbers were splintered like laths, and the men were violently hurled to the deck. As the ram drew away, the blue-jackets sprang to their guns and gave her a volley. Some of the shots must have penetrated her armor, for she became unmanageable. But the darkness prevented the officers of the "Richmond" from seeing how much damage they had done, and they did not follow up their advantage. The strange panic that the sight of a ram so often brought upon sailors of the old school fell on the officers of this squadron, and they began hastily getting their ships out of the river. By this time four more Confederate steamers had come to the aid of the ram, and were cannonading the Northern fleet at long range. In their hurried attempt to escape, the "Richmond" and the "Vincennes" had run aground. The captain of the latter vessel, fearing capture, determined to fire his vessel and escape with his crew to the "Richmond." Accordingly he laid a slow-match to the magazine, lighted it, and then, wrapping his ship's colors about his waist in the most theatrical manner, abandoned his ship. But the plan was not altogether a success. As he left the ship, he was followed by a grizzled old sailor, who had seen too much fighting to believe in blowing up his own ship; and, when he saw the smoking slow-match, he hastily broke off the lighted end, and without saying a word threw it into the water. No one observed the action, and the crew of the "Vincennes" watched mournfully for their good ship to go up in a cloud of smoke and flame. After they had watched nearly an hour, they concluded something was wrong, and returned to their old quarters. By this time the enemy had given up the conflict, and the United States navy was one ship ahead for the old sailor's act of insubordination. The Confederate flotilla returned to New Orleans, and reported that they had driven the blockaders away. There was great rejoicing in the city: windows were illuminated, and receptions were tendered to the officers of the Confederate fleet. But, while the rejoicing was still going on, the Union ships came quietly back to their old position, and the great river was as securely closed as ever.

About a month before the fight with the "Manassas," the blue-jackets of the North scored for themselves a brilliant success in the harbor of Pensacola. The frigate "Colorado" was lying outside the harbor of that

city, within clear view of the city front. For some weeks the sailors had been greatly interested in watching the activity of people on shore around a small schooner that was lying in a basin near the navy-yard. With a harbor so thoroughly blockaded as was that of Pensacola, there seemed really no need of new vessels; and the haste of the Confederates seemed inexplicable, until they saw through their glasses men at work mounting a heavy pivot-gun amidships. That made it clear that another privateer

FORT PENSACOLA.

was being fitted out to ravage the seas and burn all vessels flying the United States flag. The gallant tars of the "Colorado" determined to go in and burn the privateer before she should have a chance to escape. It was an undertaking of great peril. The schooner was near the navy-yard, where one thousand men were ready to spring to her assistance at the first alarm. On the dock fronting the navy-yard were mounted a ten-inch columbiad and a twelve-pounder field-piece, so placed as to command the deck

of the schooner and the wharf to which she was moored. Fort Pensacola, not far distant, was full of Confederate troops. But the Union sailors thought that the destruction of the privateer was of enough importance to warrant the risk, and they determined to try the adventure.

Accordingly, on the first dark night, four boats, containing one hundred officers, sailors, and marines, put off from the side of the "Colorado," and headed for the town. All was done with the most perfect silence. The tholes of the oars were wrapped in cloth to deaden their rattle in the rowlocks. No lights were carried. Not a word was spoken after the officers in muffled tones had given the order, "Give way." Through the darkness of the night the heavy boats glide on. Every man aboard has his work laid out for him, and each knows what he is to do. While the main body are to be engaged in beating back the guards, some are to spike the guns, and others to fire the schooner in several places. When within a hundred yards of the schooner, they are discovered by the sentry. As his ringing hail comes over the water, the sailors make no reply, but bend to the oars, and the boats fairly leap toward the wharf. Bang! goes the sentry's rifle; and the men in the hold of the schooner come rushing up just as the two boats dash against her side, and the sailors spring like cats over the bulwarks. One man was found guarding the guns on the wharf, and was shot down. Little time is needed to spike the guns, and then those on the wharf turn in to help their comrades on the schooner. Here the fighting is sharp and hand to hand. Nearly a hundred men are crowded on the deck, and deal pistol-shots and cutlass-blows right and left. Several of the crew of the schooner have climbed into the tops, and from that point of vantage pour down on the attacking party a murderous fire. Horrid yells go up from the enraged combatants, and the roar of the musketry is deafening. The crew of the schooner are forced backward, step by step, until at last they are driven off the vessel altogether, and stand on the wharf delivering a rapid fire. The men from the navy-yard are beginning to pour down to the wharf to take a hand in the fight. But now a column of smoke begins to arise from the open companionway; and the blue-jackets see that their work is done, and tumble over the side into their boats. It is high time for them to leave, for the Confederates are on the wharf in overwhelming force. As they stand there, crowded together, the retiring sailors open on them with canister from two

howitzers in the boats. Six rounds of this sort of firing sends the Confederates looking for shelter; and the sailors pull off through the darkness to their ship, there to watch the burning vessel, until, with a sudden burst of flame, she is blown to pieces.

Considering the dashing nature of this exploit, the loss of life was wonderfully small. Lieut. Blake, who commanded one of the boats, was saved by one of those strange accidents so common in war. As he was going over the side of the "Colorado," some one handed him a metal flask filled with brandy, to be used for the wounded. He dropped it into the lower pocket of his overcoat, but, finding it uncomfortable there, changed it to the side pocket of his coat, immediately over his heart. When the boats touched the side of the schooner, Blake was one of the first to spring into the chains and clamber aboard. Just as he was springing over the gunwale, a Confederate sailor pointed a pistol at his heart, and fired it just as Blake cut him down with a savage cutlass-stroke. The bullet sped true to its mark, but struck the flask, and had just enough force to perforate it, without doing any injury to the lieutenant.

The first death in the fight was a sad one. A marine, the first man to board the schooner, lost his distinguishing white cap in his leap. His comrades followed fast behind him, and, seeing that he wore no cap, took him for one of the enemy, and plunged their bayonets deep in his breast, killing him instantly. He was known to his comrades as John Smith, but on searching his bag letters were found proving that this was not his own name. One from his mother begged him to return home, and give up his roving life. He proved to be a well-educated young man, who through fear of some disgrace had enlisted in the marines to hide himself from the world.

Another dashing event occurred on the Gulf Coast some months later, although in this instance the Confederates were the assailants and the victors. Galveston had for some time been in the hands of the Union forces, and was occupied by three regiments of United States troops. In the harbor lay three men-of-war, whose cannon kept the town in subjection. It had been rumored for some time that the Confederates were planning to re-capture the city, and accordingly the most vigilant lookout was kept from all the ships. On the 1st of January, 1863, at half-past one A.M., as the lookout on the "Harriet Lane" was thinking of the new year just

ushered in, and wondering whether before the end of that year he could see again his cosy Northern home and wife and friends, he saw far up the river a cloud of black smoke, that rose high in the air, and blotted from sight the shining winter stars. He rubbed his eyes, and looked again. There was no mistake: the smoke was there, and rapidly moving toward him. Clearly it was a steamer coming down the river; but whether an armed enemy or a blockade-runner, he could not say. He gave the alarm; and in a moment the roll of the drums made the sailors below spring from their hammocks, and, hastily throwing on their clothes, rush on deck. The drums beat to quarters, and the crew were soon at their guns. Over the water came the roll of the drums from the other ships, and from the troops on shore, now all aroused and in arms. For thirty hours the Federals had been expecting this attack, and now they were fully prepared for it.

The attacking vessels came nearer, and the men on the Union ships strained their eyes to see by the faint starlight what manner of craft they had to meet. They proved to be two large river-steamships, piled high with cotton-bales, crowded with armed men, and provided with a few field pieces. Clearly they were only dangerous at close quarters, and the "Lane" at once began a rapid fire to beat them back. But the bad light spoiled her gunners' aim, and she determined to rush upon the enemy, and run him down. The Confederate captain managed his helm skilfully, and the "Lane" struck only a glancing blow. Then, in her turn, the "Lane" was rammed by the Confederate steamer, which plunged into her with a crash and a shock which seemed almost to lift the ships out of water. The two vessels drifted apart, the "Lane" hardly injured, but the Confederate with a gaping wound in his bow which sent him to the bottom in fifteen minutes. But now the other Confederate came bearing down under a full head of steam, and crashed into the "Lane." Evidently the Confederates wanted to fight in the old style; for they threw out grapp'ing-irons, lashed the two ships side to side, and began pouring on to the deck of the Federal ship for a hand-to-hand conflict. Cries of anger and pain, pistol-shots, cutlass blows, and occasional roars from the howitzers rose on the night air, and were answered by the sounds of battle from the shore, where the Confederates had attacked the slender Union garrison. The sinking steamer took up a position near the "Lane," and poured broadside after broadside upon the struggling Union ship. But where were the other three

Union vessels all this time? It seemed as though their commanders had lost all their coolness; for they ran their vessels here and there, now trying to do something to help their friends on shore, now making an ineffectual attempt to aid the "Harriet Lane." But on board that vessel matters were going badly for the Federals. The Confederates in great numbers kept pouring over the bulwarks, and were rapidly driving the crew from the deck. Capt. Wainwright lay dead at the door of the cabin. Across his body stood his young son, his eyes blazing, his hair waving in the wind. He held in his right hand a huge revolver, which he was firing without aim into the tossing mass of struggling men before him, while he called on his dead father to rise and help him. A stray bullet cut off two of his fingers, and the pain was too much for the little hero only ten years old; and, dropping the pistol, he burst into tears, crying, "Do you want to kill me?" The blue-jackets began to look anxiously for help toward the other vessels. But, even while they looked, they saw all hope of help cut off; for with a crash and a burst of flame the "Westfield" blew up. It turned out later, that, finding his ship aground, the captain of the "Westfield" had determined to abandon her, and fire the magazine; but in fixing his train he made a fatal error, and the ship blew up, hurling captain and crew into the air. The men on the "Harriet Lane" saw that all hope was gone, and surrendered their ship. When the captains of the two remaining gunboats saw the stars and stripes fall from the peak, they turned their vessels' prows toward the sea, and scudded out of danger of capture. At the same moment, cheers from the gray-coats on shore told that the Confederates had been successful both by land and sea, and the stars and bars once more floated over Galveston.

CHAPTER XIII.

THE CAPTURE OF NEW ORLEANS.—FARRAGUT'S FLEET PASSES FORT ST. PHILIP AND FORT JACKSON.

WHILE Commodore Foote, with his flotilla of gunboats and mortar-boats, was working his way down the Mississippi River, making occasional dashes into the broad streams that flow from either side into the father of waters, Admiral Farragut, with his fleet of tall-sparred, ocean-going men-of-war, was laying his plans for an expedition up-stream. But Farragut's first obstacle lay very near the mouth of the broad, tawny river that flows for a thousand miles through the centre of the United States. New Orleans, the greatest city of the Confederacy, stands on the river's bank, only ninety miles from the blue waters of the Gulf of Mexico. The Confederate authorities knew the value of this great city to their cause, and were careful not to let it go unprotected. Long before any thought of civil war disturbed the minds of the people of the United States, the Federal Government had built below the Crescent City two forts, that peered at each other across the swift, turbid tide of the Mississippi River. Fort St. Philip and Fort Jackson they were called, the latter being named in honor of the stubborn old military hero who beat back the British soldiers at the close of the war of 1812 on the glorious field of Chalmette near New Orleans. Fort Jackson was a huge

star of stone and mortar. In its massive walls were great cavernous bomb-proofs in which the soldiers were secure from bursting shells. It stood back about a hundred yards from the levee, and its casemates just rose above the huge dike that keeps the Mississippi in its proper channel. When the river was high from the spring floods of the north, a steamer floating on its swift tide towered high above the bastions of the fort. In the casemates and on the parapets were mounted seventy-five guns of all calibres. By its peculiar shape and situation on a jutting point of land, the fort was able to bring its guns to bear upon the river in three directions.

When the storm of civil war burst upon the country, the Confederates of New Orleans were prompt to seize this and Fort St. Philip, that stood on the other side of the river. They found Fort Jackson in the state of general decay into which most army posts fall in times of peace, and they set at work at once to strengthen it. All over the parapet, bomb-proofs, and weak points, bags of sand were piled five or six feet deep, making the strongest defence known in war. Steamers plied up and down the river, bringing provision, ammunition, and new cannon, and soon the fort was ready to stand the most determined siege. Fort St. Philip, across the river, though not so imposing a military work, was more powerful. It was built of masonry, and heavily sodded over all points exposed to fire. It was more irregular in shape than Fort Jackson, and with its guns seemed to command every point on the river. Both were amply protected from storming by wide, deep moats always filled with water.

In these two forts were stationed troops made up of the finest young men of New Orleans. For them it was a gay station. Far removed from the fighting on the frontier, and within an easy journey of their homes, they frolicked away the first year of the war. Every week gay parties of pleasure-seekers from New Orleans would come down; and the proud defenders would take their friends to the frowning bastions, and point out how easily they could blow the enemy's fleet out of water if the ships ever came within range of those heavy guns. But the ships did not come within range of the guns for many months. They contented themselves with lying at the Head of the Passes, and stopping all intercourse with the outer world, until New Orleans began to get shabby and ragged and hungry, and the pleasure-parties came less often to the forts, and the gay young soldiers saw their uniforms getting old and tattered, but knew not where to get the cloth to replace them.

LEVEE AT NEW ORLEANS BEFORE THE WAR.

In the city no rumble of commerce was heard on the streets. Grass grew on the deserted levee, where in times of peace the brown and white

cotton-bales were piled by the thousand, waiting for strong black hands to seize and swing them upon the decks of the trim Liverpool packets, that lay three or four deep along the river front. The huge gray custom-house that stood at the foot of Canal Street no longer resounded with the rapid tread of sea-captains or busy merchants. From the pipes of the cotton-presses, the rush of the escaping steam, as the ruthless press squeezed the great bale into one-third its original size, was no longer heard. Most of the great towering steamboats that came rushing down the river with stores of cotton or sugar had long since been cut down into squat, powerful gunboats, or were tied up idly to the bank. Across the river, in the ship-yards of Algiers, there seemed a little more life; for there workmen were busy changing peaceful merchant vessels into gunboats and rams, that were, the people fondly hoped, to drive away the men-of-war at the river's mouth and save the city from starvation. From time to time the streets of the city resounded with the notes of drum and fife, as one after the other the militia companies went off to the front and the fighting. Then the time came when none were left save the "Confederate Guards," old gray-haired men, judges, bankers, merchants, gentlemen of every degree, too old for active service at the front, but too young not to burn for the grasp of a gun or sword while they knew that their sons and grandsons were fighting on the blood-stained soil of Virginia and Tennessee.

But, while the city was gradually falling into desolation and decay, preparations were being made by the Federal navy for its capture. On the 2d of February, 1862, Admiral Farragut sailed from Hampton Roads in his stanch frigate the "Hartford," to take command of a naval expedition intended to capture New Orleans. The place of rendezvous was Ship Island, a sandy island in the Gulf of Mexico. Here he organized his squadron, and started for his post in the Mississippi, below the forts. The first obstacle was found at the mouth of the river, where the heavy war-vessels were unable to make their way over the bar. Nearly two weeks were occupied in the work of lightening these ships until they were able to pass. The frigate "Colorado" was unable to get over at all. The "Pensacola" was dragged through the mud by the sheer strength of other vessels of the expedition. While they were tugging at her, a huge hawser snapped with a report like a cannon, and the flying ends killed two men

and seriously wounded five others. But at last the fleet was safely past all obstacles, and Admiral Farragut found himself well established in the lower Mississippi, with a force of twenty-five men-of-war, and twenty mortar-schooners; one of the most powerful armadas ever despatched against an enemy. Farragut lost no time in getting his ships prepared for the baptism of fire which was sure to come. While he was diligently at work on his preparations, he was visited by some French and English naval officers, who had carefully examined the defences of the Confederates, and came to warn him that to attack the forts with wooden vessels, such as made up his fleet, was sheer madness, and would only result in defeat. "You may be right," answered the brave old sailor, "but I was sent here to make the attempt. I came here to reduce or pass the forts, and to take New Orleans, *and I shall try it on.*" The foreigners remarked that he was going to certain destruction, and politely withdrew.

In the mean time, the tars on the mortar-fleet were working industriously to get their ships in fighting-trim. The topmasts were stripped of their sails, and lowered; the loose and standing rigging strapped to the masts; the spars, forebooms, and gaffs unshipped, and secured to the outside of the vessels to avert the danger from splinters, which, in naval actions, is often greater than from the shots themselves. From the main-deck every thing was removed that could obstruct the easy handling of the tremendous mortars; and the men were drilled to skill and alertness in firing the huge engines of death. The work was hastened on the mortar-schooners, because the plan was to rush them into position, and let them harass the Confederates with a steady bombardment, while the ships-of-war were preparing for their part in the coming fight.

The mortar-fleet was under command of Admiral Porter, an able and energetic officer. He soon had his ships ready, and began moving them into position along the banks of the river, out of sight of the forts. To further conceal them from the gunners in the forts, he had the masts and rigging wrapped with green foliage; so that, lying against the dense thickets of willows that skirt that part of the river, they were invisible. Other boats that were in more exposed positions had their hulls covered with grass and reeds, so that they seemed a part of the swamp that bordered the river. After the line of fire had been obtained by a careful mathematical survey, Porter got all his mortar-boats into position, and

began his bombardment. The gunners on the mortar-boats could not see the forts; but the range had been calculated for them, and they merely fired mechanically. A lookout, perched on the masthead, could see over the low willow-forest, and watch the course of the shells as they rushed high into the air, and then, falling with a graceful curve, plunged into the forts. The firing was begun on the 16th of April, and was kept up with a will. The twenty huge mortars keeping up a constant fire, made a deafening roar that shook the earth, and could be heard far up the river at New Orleans, where the people poured out into the streets, and gayly predicted defeat for any enemy who should attack "the boys in the forts." The forts were not slow in returning the fire; but as the mortar-vessels were hidden, and did not offer very large marks, their fire was rather ineffective. Parties of Confederates, old swamp-hunters, and skilled riflemen, stole down through the dense thickets, to pick off the crews of the mortar-schooners. They managed to kill a few gunners in this way, but were soon driven away by the point-blank fire of the supporting gunboats. But all this time the shells were falling thick and fast, driving the soldiers to the bomb-proofs, and tearing to pieces every thing unprotected. One shell set fire to some wooden structures that stood on the parade-ground in Fort Jackson; and, as the smoke and flames rose in the air, the gunners down the river thought that the fort was burning, and cheered and fired with renewed vigor. The shells that burst upon the levee soon cut great trenches in it, so that the mighty Mississippi broke through with a rush, and flooded the country all about. But the forts seemed as strong and unconquered as ever.

While the soldiers were crowded together in the bomb-proofs to escape the flying bits of shell, the sailors on the little fleet of Confederate vessels anchored above them were busily engaged in getting ready a fire-raft which was to float down the river, and make havoc among the vessels of the Union fleet. Two such rafts were prepared; one of which, an immense affair, carrying cords of blazing pine-wood, was sent down in the early morning at a time when the vessels were utterly unprepared to defend themselves. Luckily it grounded on a sandbar, and burned and crackled away harmlessly until it was consumed. This warned Commander Porter of the danger in which his mortar-vessels were of a second attack of the same nature; and accordingly he put in readiness one hundred and fifty

Copyright, 1881, by L. PRATT & CO.

FARRAGUT'S FLEET ENGAGING THE ENEMY NEAR NEW ORLEANS, APRIL 26, 1862

small boats with picked crews, and well supplied with axes and grapnels, whose duty it was to grapple any future rafts, and tow them into a harmless position. They did not have long to wait. At sundown that night, Commander Porter reviewed his little squadron of row-boats as they lay drawn up in line along the low marshy shores of the mighty river. The sun sank a glowing red ball beneath the line at which the blue waters of the gulf and the blue arch of heaven seemed to meet. The long southern twilight gradually deepened into a black, moonless night. The cries of frogs and seabirds, and the little flashes of the fireflies, were silenced and blotted out by the incessant roar and flash of the tremendous mortars that kept up their deadly work. Suddenly in the distance the sky grows red and lurid. "The fort is burning!" cry the men at the guns; but from the masthead comes the response, "No, the fire is on the river. It is another fire-raft." The alarm was instantly given to all the vessels of the fleet. Bright colored signal-lights blazed on the decks, and the dark, slender cordage stood out against the brilliant red and green fires that flickered strangely upon the dark wooded banks of the river. Rockets rushed high into the air, and, bursting, let fall a shower of party-colored lights that told the watchers far down the river that danger was to be expected. Then the signal-lights went out, and all was dark and silent save where the lurid glare of the great mass of fire could be seen floating in the great curves of the tortuous river toward the crowded ships. It was a time of intense suspense. The little flotilla of fire-boats, organized by Commander Porter that day, was on the alert; and the blue-jackets bent to their oars with a will, and soon had their boats ranged along a bend far above the fleet. Here they waited to catch the fiery monster, and save the ships. The danger came nearer fast. Rapidly the flames increased in volume, until the whole surrounding region was lighted up by the glare; while from the floating fire, a huge black column of smoke arose, and blended with the clouds that glowed as though they themselves were on fire. When the raft came into view around a point, it was seen to be too big for the boats to handle unaided, and two gunboats slipped their cables, and started for the thing of terror. From every side the row-boats dashed at the raft. Some grappled it, and the sailors tugged lustily at their oars, seeking to drag the mass of flames toward the shore. Then the "Westfield," under full head of steam, dashed furiously against the raft, crashing in the timbers

and sending great clouds of sparks flying high in the air. From her hose-pipes she poured floods of water on the crackling, roaring, blazing mass; while all the time, with her powerful engines, she was pushing it toward the shore.

In the mean time, the sailors from the fleet of small boats were swarming upon the raft wherever they could find a foot-hold free from flame. Some carrying buckets dashed water upon the flames, some with axes cut loose flaming timbers, and let them float harmlessly down the river. It was a fight in which all the men were on one side; but it was a grand fight, and was eagerly watched by those on the imperilled vessels. The immediate arena of the conflict was bright as day, but all around was gloom. At last the pluck and determination of the men triumph over the flames. The raft, flaming, smouldering, broken, is towed out of the channel, and left to end its life in fitful flashes on a sandy point. The returning boats are greeted with cheers, and soon darkness and silence fall upon the scene. The mortars cease their thunderous work for the night; and ere long the only sounds heard are the rush of the mighty waters, or the faint cry of the night birds in the forest. The sentinel pacing the deck peers in vain through the gloom. War gives way for a time to rest.

Hardly had the gray dawn begun to appear, when the roll of the drums on the decks of the ships was heard; and, soon after, the roar of the opening gun was heard from one of the mortar-schooners. Again the bombardment was opened. The twenty boats in the mortar-fleet were divided into three divisions, each of which fired for two hours in succession, and then stopped for a time to allow the great cannon to cool. Thus a continuous bombardment was kept up, and the soldiers in the forts were given no time to repair the damages caused by the bursting shells. Every mortar was fired once in five minutes; so that one shell was hurled towards the fort about every minute, while sometimes three shells would be seen sweeping with majestic curves through the air at the same time. The shells weighed two hundred and fifteen pounds; and when they were hurled into the air by the explosion of twenty pounds of powder, the boat bearing the mortar was driven down into the water six or eight inches, and the light railings and woodwork of buildings at the Balize, thirty miles away, were shattered by the concussion. The shells rose high in the air, with an unearthly

shriek, and after a curve of a mile and a half fell into or near the forts and, bursting, threw their deadly fragments in all directions. Day after day, and night after night, this went on. If the men on the mortar-schooners showed bravery and endurance in keeping up so exhausting a fire so steadily, what shall we say for the men in the forts who bore up against it so nobly? Before noon of the first day of the bombardment, the soldiers of Fort Jackson saw their barracks burned, with their clothing, bedding, and several days' rations. Shells were pouring in upon them from vessels that they could not see. The smooth-bore guns mounted in the embrasures would hardly send a shot to the nearest of the hostile gunboats. Then the river broke through its banks, and half the fort was transformed into a morass. An officer in Fort Jackson said, after the surrender, that in two hours over one hundred shells had fallen upon the parade-ground of that work, tearing it up terribly. For six days this terrible fire was endured; and during the latter half of the bombardment the water stood knee deep on the gun-platforms, and the gunners worked at their guns until their shoes, soaked for days and days, fairly fell from their feet. For bed and bedding they had the wet earth, for rations raw meat and mouldy bread. If there were glory and victory for the Union sailors, let there at least be honor and credit granted the soldiers of the gray for the dogged courage with which they bore the terrible bombardment from Porter's flotilla.

While the mortars were pounding away through those six long days and nights, Farragut was getting ready to take his ships past the forts. Union scouts and spies had travelled over every foot of land and water about the forts; and the exact strength of the Confederates, and the difficulties to be overcome, were clearly known to the Federal admiral. One of the chief obstructions was a chain of rafts and old hulks that stretched across the channel by which the fleet would be obliged to ascend the river. Under cover of a tremendous fire from all the mortars, two gunboats were sent up to remove this obstruction. The night was dark and favorable to the enterprise, and the vessels reached the chain before they were discovered. Then, under a fierce cannonade from the forts, Lieut. Caldwell put off in a row-boat from his vessel, boarded one of the hulks, and managed to break the chain. The string of hulks was quickly swept ashore by the swift current, and the channel was open for the ascent of the Union fleet.

On the 23d of April, Farragut determined that his fleet should make the

BREAKING THE CHAIN.

attempt to get past the forts the following day. He knew that the enemy must be exhausted with the terrible strain of Porter's bombardment, and he felt that the opportunity had arrived for him to make a successful dash for the upper river. The fleet was all prepared for a desperate struggle. Many of the captains had daubed the sides of their vessels with the river mud, that they might be less prominent marks for the Confederate gunners. The chain cables of all the vessels were coiled about vulnerable parts, or draped over the sides amidships to protect the boilers. Knowing that it was to be a night action, the gun-decks had been whitewashed; so that even by the dim, uncertain light of the battle lanterns, the gunners could see plainly all objects about them. Hammocks and nettings were stretched above the decks to catch flying splinters from the spars overhead. Late at night the admiral in his longboat was pulled from ship to ship to view the preparations made, and see that each captain fully understood his orders.

It was two o'clock on the morning of the 24th of April, when the Confederates on the parapets of their forts might have heard the shrill notes of fifes, the steady tramp of men, the sharp clicking of capstans, and the grating of chain cables passing through the hawse-holes on the ships below. Indeed, it is probable that these sounds were heard at the forts, and were understood, for the Confederates were on the alert when the ships came steaming up the river.

They formed in a stately line of battle, headed by the "Cayuga." As they came up the stream, the gunners in the forts could see the mastheads over the low willow thickets that bordered the banks of the stream. The line of obstructions was reached and passed, and then the whole furious fire of both forts fell upon the advancing ships. Gallantly they kept on their way, firing thunderous broadsides from each side. And, while the ships were under the direct fire of the forts, the enemy's fleet came dashing down the river to dispute the way. This was more to the taste of Farragut and his boys in blue. They were tired of fighting stone walls. In the van of the Confederate squadron was the ram "Manassas," that had created such a panic among the blockading squadron a month before. She plunged desperately into the fight. The great frigate "Brooklyn" was a prominent vessel in the Union line, and at her the ram dashed. The bold hearts on the grand old frigate did not seek to avoid the conflict, and the two vessels

rushed together. The ram struck the "Brooklyn" a glancing blow; and the shot from her one gun was returned by a hail of cannon-balls from the frigate's tremendous broadside, many of which broke through the iron plating. Nothing daunted, the ram backed off and rushed at the frigate again. This time she struck full on the frigate's side. The shock was terrible. Men on the gun-deck of the ram were hurled to the deck, with the blood streaming from their nostrils. The frigate keeled over farther and farther, until all thought that she would be borne beneath the water by the pressure of the ram. All the time the spiteful bow-gun of the iron monster was hurling its bolts into her hull. But the blow of the ram had done no damage, for she had struck one of the coils of chain that had been hung down the "Brooklyn's" side. The two vessels slowly swung apart; and, after a final broadside from the "Brooklyn," the "Manassas" drifted away in the pitchy darkness to seek for new adversaries. She was not long in finding one; for as the gray dawn was breaking she suddenly found herself under the very bows of the "Mississippi," which was bearing down upon her and seemed sure to run her down. The captain of the "Manassas" was an able steersman, and neatly dodged the blow; but in this quick movement he ran his vessel ashore, and she lay there under the guns of the "Mississippi," and unable to bring any of her own guns to bear. The captain of the frigate was not slow in taking advantage of this chance to be revenged for all the trouble she had given the Union fleet; and he took up a good position, and pounded away with his heavy guns at the iron monster. The heavy shots crashed through the iron plating and came plunging in the portholes, seeking every nook and cranny about the vessel. It was too much for men to stand, and the crew of the "Manassas" fled to the woods; while their vessel was soon set on fire with red-hot shots, and blew up with a tremendous report soon after.

In the mean time, the ships of the Union fleet were doing daring work, and meeting a determined resistance. The flag-ship "Hartford" was met by a tug which pushed a huge burning fire-raft against her sides. There the flaming thing lay right up against the port-holes, the flames catching the tarred rigging, and running up the masts. Farragut walked his quarter-deck as coolly as though the ship was on parade. "Don't flinch from that fire, boys," he sang out, as the flames rushed in the port-holes, and drove the men from their guns. "There's a hotter fire than that for those who

don't do their duty. Give that rascally little tug a shot, and don't let her go off with a whole coat." But the tug did get away, after all; and no one can feel sorry that men plucky enough to take an unarmed tug into a terrible fight of frigates and ironclads should escape with their lives. The men on the "Hartford" fought the flames with hose and buckets, and at last got rid of their dangerous neighbor. Then they saw a steamer crowded with men rushing toward the flag-ship without firing a shot, and evidently intending to board. Capt. Broome, with a crew of marines, was working a bow-gun on the "Hartford." Carefully he trained the huge piece upon the approaching steamer. He stepped back, stooped for a last glance along the sights, then with a quick pull of the lanyard the great gun went off with a roar, followed instantly by a louder explosion from the attacking steamer. When the smoke cleared away, all looked eagerly for the enemy; but she had vanished as if by magic. That single shot, striking her magazine, had blown her up with all on board.

Much of the hardest fighting was done by the smaller vessels on either side. The little Confederate "cotton-clad" "Governor Moore" made a desperate fight, dashing through the Union fleet, taking and giving broadsides in every direction. The Union vessel "Varuna" also did daring work, and naturally these two ships met in desperate conflict. After exchanging broadsides, the "Governor Moore" rammed her adversary, and, while bearing down on her, received a severe raking fire from the "Varuna." The "Governor Moore" was in such a position that none of her guns could be brought to bear; but her captain suddenly depressed the muzzle of his bow-gun, and sent a shot crashing through *his own* deck and side, and deep into the hull of the "Varuna." The vessels soon parted, but the "Varuna" had received her death-wound, and sank in shallow water. The "Governor Moore" kept on her way, but was knocked to pieces by the fire from the heavy guns of the frigates shortly after.

And so the battle raged for five hours. To recount in full the deeds of valor done, would be to tell the story of each ship engaged, and would require volumes. Witnesses who saw the fight from the start were deeply impressed by the majesty of the scene. It was like a grand panorama. "From almost perfect silence,—the steamers moving through the water like phantom ships,—one incessant roar of heavy cannon commenced, the Confederate forts and gunboats opening together on the head of our

line as it came within range. The Union vessels returned the fire as they came up, and soon the hundred and seventy guns of our fleet joined in the thunder which seemed to shake the very earth. A lurid glare was thrown over the scene by the burning rafts; and, as the bombshells crossed each other and exploded in the air, it seemed as if a battle were taking place in the heavens as well as on the earth. It all ended as suddenly as it commenced."

While this gigantic contest was going on in the river abreast of the forts, the people of New Orleans were thronging the streets, listening to the unceasing roar of the great guns, and discussing, with pale faces and anxious hearts, the outcome of the fight. "Farragut can never pass our forts. His wooden ships will be blown to pieces by their fire, or dashed into atoms by the 'Manassas,'" people said. But many listened in silence: they had husbands, sons, or brothers in that fearful fight, and who could tell that they would return alive? By and by the firing ceased. Only an occasional shot broke the stillness of the morning. Then came the suspense. Had the fleet been beaten back, or was it above the forts, and even now sullenly steaming up to the city? Everybody rushed for the housetops to look to the southward, over the low land through which the Mississippi winds. An hour's waiting, and they see curls of smoke rising above the trees, then slender dark lines moving along above the treetops. "Are they our ships?" every one cries; and no one answers until the dark lines are seen to be crossed by others at right angles. They are masts with yard-arms, masts of sea-going vessels, the masts of the invader's fleet. A cry of grief, of fear, of rage, goes up from the housetops. "To the levee!" cry the men, and soon the streets resound with the rush of many feet toward the river. "The river is crooked, and its current swift. It will be hours before the Yankees can arrive: let us burn, destroy, that they may find no booty." Let one who was in the sorrowful city that terrible April day tell the story. "I went to the river-side. There, until far into the night, I saw hundreds of drays carrying cotton out of the presses and yards to the wharves, where it was fired. The glare of those sinuous miles of flame set men and women weeping and wailing thirty miles away, on the farther shore of Lake Pontchartrain. But the next day was the day of terrors. During the night, fear, wrath, and sense of betrayal, had run through the people as the fire had run through the cotton. You have seen, perhaps, a family fleeing, with lamentations and

wringing of hands, out of a burning house; multiply it by thousands upon thousands: that was New Orleans, though the houses were not burning. The firemen were out; but they cast fire on the waters, putting the torch to the empty ships and cutting them loose to float down the river.

"Whoever could go was going. The great mass that had no place to go to, or means to go with, was beside itself. 'Betrayed! betrayed!' it cried, and ran in throngs from street to street, seeking some vent, some victim for its wrath. I saw a crowd catch a poor fellow at the corner of Magazine and Common Streets, whose crime was that he looked like a stranger and might be a spy. He was the palest living man I ever saw. They swung him to a neighboring lamp-post; but the Foreign Legion was patrolling the town in strong squads, and one of its lieutenants, all green and gold, leaped with drawn sword, cut the rope, and saved the man. This was one occurrence; there were many like it. I stood in the rear door of our store, Canal Street, soon after re-opening it. The junior of the firm was within. I called him to look toward the river. The masts of the cutter 'Washington' were slowly tipping, declining, sinking—down she went. The gunboat moored next her began to smoke all over and then to blaze. My employers lifted up their heels and left the city, left their goods and their affairs in the hands of one mere lad—no stranger would have thought I had reached fourteen—and one big German porter. I closed the doors, sent the porter to his place in the Foreign Legion, and ran to the levee to see the sights.

"What a gathering!—the riff-raff of the wharves, the town, the gutters. Such women! such wrecks of women! and all the juvenile rag-tag. The lower steamboat-landing, well covered with sugar, rice, and molasses, was being rifled. The men smashed; the women scooped up the smashings. The river was overflowing the top of the levee. A rain-storm began to threaten. 'Are the Yankee ships in sight?' I asked of an idler. He pointed out the tops of their naked masts as they showed up across the huge bend of the river. They were engaging the batteries at Camp Chalmette, the old field of Jackson's renown. Presently that was over. Ah, me! I see them now as they come slowly round Slaughterhouse Point, into full view: silent, so grim and terrible, black with men, heavy with deadly portent, the long banished stars and stripes flying against the frowning sky. Oh for the 'Mississippi,' the 'Mississippi!' Just then

she came down upon them. But how? Drifting helplessly, a mass of flames.

"The crowds on the levee howled and screamed with rage. The swarming decks answered never a word; but one old tar on the 'Hartford,' standing with lanyard in hand, beside a great pivot-gun, so plain to view that you could see him smile, silently patted its big black breech and blandly grinned."

As the masts of the fleet came up the river, a young man stepped out upon the roof of the City Hall, and swiftly hoisted the flag of the State of Louisiana. When the ships came up, two officers were sent ashore to demand the surrender of the city; and shoulder to shoulder the two old sailors marched through a howling, cursing mob to the City Hall. The mayor refused to surrender the city, saying that Farragut already had captured it. The officers went back to their ships, and the flag still floated. Two days later the officers, with a hundred sailors and marines, returned and demanded that the flag be hauled down. No one in the city would tear it down, and the Federals went up to the roof to lower it themselves. The street and surrounding housetops were crowded with a hostile people, all armed. No one could tell that the fall of the flag would not be followed by a volley from the undisciplined populace. The marines in front of the building stood grouped about two loaded howitzers that bore upon the darkly muttering crowd. Violence was in the air. As the two officers rose to go to the roof, the mayor, a young Creole, left the room and descended the stairs. Quietly he stepped out into the street, and without a word stood before one of the howitzers, his arms folded, eying the gunner, who stood with lanyard in hand, ready to fire at the word of command. The flag fell slowly from the staff. Not a sound arose from the crowd. All were watching the mayor, who stood coldly looking on death. The Federal officers came down carrying the flag. A few sharp commands, and the marines tramped away down the street, with the howitzers clanking behind them. The crowd cheered for Mayor Monroe and dispersed, and New Orleans became again a city of the United States.

CHAPTER XIV.

ALONG THE MISSISSIPPI. — FORTS JACKSON AND ST. PHILIP SURRENDER. — THE BATTLE AT ST. CHARLES. — THE RAM "ARKANSAS." — BOMBARDMENT AND CAPTURE OF PORT HUDSON.

WHILE New Orleans was thus excited over the capture of the city, the soldiers in the forts below were debating as to the course they should adopt. They had not surrendered; and although the great bastions were pounded out of shape by the heavy guns of the fleet, yet they were still formidable defences, giving perfect security to the men in the bomb-proofs. But their case was hopeless: for Farragut was at New Orleans, and could cut off their supplies; while Porter, with his mortar-boats, was below them, putting escape out of the question. Every now and then a big shell would drop on the parade, and its flying pieces would remind the garrison that their enemies were getting impatient. After waiting a day or two, Porter sent a lieutenant with a flag of truce to the fort, calling upon the Confederate commander to surrender the two forts and the shattered remnant of the Confederate navy. He complimented the Confederates upon their gallant defence, but warned them, that, should they refuse to surrender, he would recommence his bombardment with new vigor. The Confederates refused to surrender until they heard from New Orleans: and the next day the monotonous thunder of the heavy mortars began again, and

again the heavy shells began falling thick and fast upon the forts. Wearily the gray-coated soldiers settled down to continue what they felt must be a useless defence. The officers did their best to inspirit the men; but all knew that a surrender must come before long and at last the men mutinously left their guns, and said they would fight no longer. They had borne without flinching a terrible bombardment, and now they felt that to fight longer would be a foolish sacrifice of life. Many left the forts, and plunged into the woods to escape the terrible shells. Gen. Duncan saw that all was lost, and on the night of the 28th of April sent an officer to the fleet announcing the surrender. On the following day Porter proceeded up-stream with his squadron, and anchored off the fort. A boat, manned by six trim sailors in dress uniforms, put off, and soon returned, bringing the commander of the defeated forces and two or three officers. They were received on the "Harriet Lane," and Commodore Porter had made great preparations for the meeting. The crews of all the vessels were dressed in snow-white mustering-suits, and the officers in brass-buttoned blue coats and white trousers. The decks were scrubbed, and all traces of the fight cleared away. As the Confederate officers came up to the fleet, one of them, a former lieutenant in the Union navy, said, "Look at the old navy. I feel proud when I see them. There are no half-breeds there: they are the simon-pure." As the Confederates came over the side, Porter stood, with his officers, ready to receive them. The greatest politeness was observed on either side; and Porter writes, "Their bearing was that of men who had gained a victory, instead of undergoing defeat." While the papers of capitulation were being signed, a message came from the deck that the huge Confederate ironclad "Louisiana" was drifting down upon them, a mass of flames, and there was great danger that she would blow up in the midst of the Union fleet. "This is sharp practice, gentlemen," said Porter, "and some of us will perhaps be blown up; but I know what to do. If you can stand what is coming, we can; but I will make it lively for those people if anybody in the flotilla is injured."

"I told Lieut. Wainwright to hail the steamer next him," writes Capt. Porter, "and tell her captain to pass the word for the others to veer out all their riding-chains to the bitter end, and stand by to sheer clear of the burning ironclad as she drifted down. I then sat down to the table, and said, 'Gentlemen, we will proceed to sign the capitulation.' I handed the paper

to Gen. Duncan, and looked at the Confederate officers to see how they would behave under the circumstances of a great ironclad dropping down on them, all in flames, with twenty thousand pounds of powder in her magazines. For myself, I hoped the fire would not reach the powder until the ship had drifted some distance below us. My greatest fear was that she would run foul of some of the steamers.

"While I was thinking this over, the officers were sitting as coolly as if at tea-table among their friends.

"Just then there was a stir on deck, a kind of swaying of the vessel to and fro, a rumbling in the air, then an explosion which seemed to shake the heavens. The 'Harriet Lane' was thrown two streaks over, and every thing in the cabin was jostled from side to side; but not a man left his seat, or showed any intention of doing so.

"I was glad that I had signed before the explosion took place, as I would not have liked to have my autograph look shaky."

The destruction of the "Louisiana" was a bit of trickery on the part of the Confederate naval officers, which Farragut punished by sending them North as close prisoners, while the army officers were granted freedom under parole. So ended the Confederate control over the mouth of the Mississippi; and Porter, after waiting long enough to see a blue-coat garrison in Forts St. Philip and Jackson, started up the river to rejoin his chief in New Orleans.

But, on reaching the city, he found that the energetic admiral had already started out to clear the river of the Confederate batteries that lined it on either side as far up as Vicksburg. This was a service of no little danger, and one bringing but little satisfaction; for no sooner had the gunboats left one point, from which by hard firing they had driven the Confederates, than the latter would return in force, build up again their shattered earthworks, mount new guns, and be once more ready for battle. But more powerful than these little one or two gun-batteries were the Confederate works at Port Hudson, the destruction of which was absolutely necessary for further Union successes on the great river. Between Port Hudson and Vicksburg, the river was completely under the control of the Confederates; and it was a powerful gunboat that could hope to navigate that stretch of water unharmed. Farragut determined to attack Port Hudson, and set the 14th of March, 1863, as the date for the action.

Fort Hudson batteries were perched on a high bluff that overlooks one of those abrupt curves around which the current of the Mississippi River sweeps with such terrific force. The heavy guns bore down upon a point at which the ships would almost inevitably be swept out of their course by the swift stream, and where the river was filled with treacherous shifting shoals. Naval officers all agreed that to pass those batteries was a more difficult task than had been the passage of the forts below New Orleans; yet Farragut, eager to get at the stronghold of the foe in Vicksburg, determined to make the attempt. The mortar-vessels were stationed below to drive the enemy from his guns with well-directed bombs; while the fleet, led by the stanch old "Hartford," should make a bold dash up the river.

Night fell upon the scene; and the ships weighed anchor, and started upon their perilous voyage. To the side of each man-of-war was bound a gunboat to tow the great vessel out of danger in case of disaster. Silently the long string of vessels swept upward towards the batteries; but, as the "Hartford" came into range, the watchful Confederates gave the alarm, and the nearest battery at once opened fire. Then from Porter's mortar-schooners far down the river came an answering roar; and, as ship after ship came up into range, she opened with shot and shell upon the works. On the dark river-banks great alarm fires were kindled, lighting up the water with a lurid glare, and making the ships clearly visible to the Confederate gunners. But soon the smoke of battle settled down over all; and gunners, whether on shore or on the ships, fired at random. The "Hartford" led the way, and picked out the course; and the other vessels followed carefully in her wake. In the mizzen-top of the flag-ship was stationed a cool old river pilot, who had guided many a huge river steamer, freighted with precious lives, through the mazy channels of the Mississippi. There, high above the battle-smoke, heedless of the grape-shot and bits of flying shell whistling around him, he stood at his post, calmly giving his orders through a speaking-tube that led to the wheel-room. Now and then the admiral on the deck below would call up, asking about the pilot's safety, and was always answered with a cheery hail. But though the "Hartford" went by the batteries, heedless of the storm and lead poured upon her, she found herself alone, when, after firing a last gun, she swept into the clear air and tranquil water out of range of the enemy's guns. She waited some time for the other ships to come up, while all on board watched eagerly,

save those who lay moaning on the surgeon's tables in the cockpit below. The night wore on, and all on board were consumed with anxiety for the fate of the vessels that had dropped behind. The lookout in the top reported that he could see far down the river a bright red light that could only be caused by a burning vessel. It proved to be the steamer "Mississippi," that had grounded under the guns of the batteries, and had been fired and abandoned by her crew. But of this the admiral knew nothing; and when, after an hour or two, he heard the dull, heavy boom of an explosion, he went sadly to his cabin, fearing that the lives of many valiant sailors had been sacrificed. There was no way to communicate with the fleet below, and it was not until days afterward that the admiral learned how his fleet had been beaten back by the heavy guns of the Confederates and the swift current of the river. The "Richmond" grounded at a point within easy range of the batteries, and her crew fought desperately while shell after shell went crashing through her hull. They saw the other vessels of the fleet go drifting by helpless in the mighty current of the river, but they faltered not in their brave defence until they saw their ship a wreck and in flames. Then leaving their dead comrades with the "Richmond" for a funeral pyre, they escaped to the shore, and threaded their way through miles of morasses and dense thickets until they came to the mortar-boats, where they found refuge and rest. And so that first attack on Port Hudson ended with Farragut above the batteries, and his ships below. It had only served to prove, that, safe in their heavy earthworks, the Confederates could defy any attack by ships alone. This fact was clear to the Union authorities, and they began massing troops about the hostile works. Two months later, Porter's mortar-boats, the frigates and gunboats, and the batteries and muskets of an immense body of troops, opened on the works. While the heavy fire was being kept up, the Union armies were closing in, digging trenches, and surrounding the Confederates on all sides. The firing came to be short-range work and very deadly. "To show you what cool and desperate fighting it was," says a Confederate, "I had at least twenty-five shots at Federals not two hundred feet away. In one instance I fired upon a lieutenant who was urging on his men. I wounded him in his left arm. He fired at me with his revolver, and sent a bullet through my cap. Next time I hit him in the hip, and he fell; but, while I was reloading, he raised himself up, and shot the man next to me through the head. The officer

was so close to me that I could tell the color of his eyes, and detect a small scar on his face."

This sort of work continued for weeks, with occasional charges by the Federals. Farragut's fleet kept up its bombardment, but did little damage. One of the Confederate soldiers said, some time after the war, "One can get used to almost any thing. After the first two or three days, we took the bombardment as part of the regular routine. Pieces of shell were continually flying about, and it was the regular thing for a bomb to drop down among us at intervals. I have seen them come down within fifty feet of a sentinel, and throw up a wagon-load of dirt, without his even turning his head. We had but few men hurt by the artillery-fire. I do not believe we averaged one man hit for every thousand pounds of metal thrown. I remember that one day I counted thirteen shells and bombs hurled at the spot where I was posted before we had a man hurt, and he was only slightly wounded." Naturally, such work as this could not drive the Confederates from their trenches; and the fleet soon concluded to leave the army to capture Port Hudson, while the ships steamed on up the river toward Vicksburg. The army kept up the siege for weeks, until the Confederates, hearing of the fall of Vicksburg, surrendered.

While the Union fleet was thus fighting its way up to Vicksburg, the Confederates were working away at a great ram that they were building in a secluded spot far up the Yazoo River. Work on the ram was being pushed with the greatest energy; and the Union sailors, in their ships on the Mississippi, listened daily to the stories of escaping negroes, and wondered when the big ship would come down and give them a tussle. The crew of the ram were no less impatient for the fray; for they were tired of being hidden away up a little river, plagued by mosquitoes and gnats. The dark shades of the heavy forests were seldom brightened by a ray of sun. The stream was full of alligators, that lay lazily on the banks all day, and bellowed dismally all night. The chirp of a bird was rarely heard. In its place were the discordant screams of cranes, or hisses of the moccasins or cotton-mouths. When at last the carpenters' clatter had ceased, and the ram, ready for action, lay in the little river, the crew were mustered on the deck, and told that the new boat had been built to clear the Union vessels from the Mississippi, and that purpose should be carried out. No white flag was to flutter from that flag-staff; and she should sink

FARRAGUT'S FLEET ENGAGING THE PORT HUDSON (L.A.) BATTERIES, MARCH, 1863

with all her crew before she would surrender. Any sailor who feared to enter upon such a service might leave the ship at once. No one left; and the "Arkansas" started down the river to look for an enemy. She was not long in finding one. At the mouth of the Yazoo floated three Union gunboats, — the "Carondelet," the "Tyler," and the "Queen of the West." As the ram came down into sight, her men heard the roll of the drums on the decks of the hostile vessels. The gunboats quickly opened fire, which was as promptly returned by the "Arkansas;" and, as she came swiftly rushing down the stream, the three vessels fled before her. The men on the ram were all new recruits, and made awkward work of the firing; but as she came to close quarters she sent her shells crashing into the Union ships, while the shot she received in return rattled harmlessly off her steel-mailed sides. The "Carondelet" was the first vessel to come to grief. She had hardly fired four shots when a heavy solid shot crashed through her side, and rattled against the most delicate part of the engine. She was helpless at once; and hardly had this damage been reported when a second shot came with a burst into an open port, killed five men, and broke its way out the other side. In ten minutes her decks were slippery with blood, and thick strewn with wounded and dead men. The current of the river drifted her upon a sandbar; and she lay there helplessly, now and again answering the galling fire of her foe with a feeble shot. Pouring in a last broadside, the "Arkansas" steamed past her, and, disregarding the other two vessels, headed for Vicksburg, where she knew her aid was sorely needed.

The news of her coming preceded her; and, when she came within sight of the steeples of the city, at least ten thousand people were watching her progress, and wondering whether she could pass by the Federal batteries and through the Federal fleet. The Federal fleet was all ready for her, and prepared such a gauntlet for the "Arkansas" as had never been run by any vessel. As she came within range, every Union gun that could be brought to bear opened; and shot and shell rained from shore-batteries and marine guns upon the tough hide of the ram. As she sped by the vessels, they gave her their broadsides, and the effect was tremendous. As the huge iron balls struck the ship, she keeled far over; and to her crew inside, it seemed as though she was being lifted bodily out of the water. Not a shot broke through the armor; but the terrible concussions knocked men down, and

made blood come pouring from their nostrils. For new men, her crew fought well and bravely; though two fell flat on their faces, afraid to lift their heads, lest they be taken off by a shell.

When it was seen that the "Arkansas" was likely to pass through the lines unscathed, the Federals tried to blockade her way; but she deviated not an inch from her path. The vessel that stood before her had to move aside, or take the chances of a blow from her terrible iron beak. She came straight to the centre of the fleet before opening fire; and when her port-holes were opened, and the big guns peered out, they found plenty of tar-

THE "ARKANSAS" UNDER FIRE.

gets. Her first volley knocked a gunboat to pieces; and in another minute she had crashed into the side of a Union ram, sending that unlucky craft ashore for repairs. But the storm of solid shot was too much for her; and she was forced to seek shelter under the bluffs, where the heavy guns of the Confederate shore-batteries compelled the Union ships to keep a respectful distance. Here she lay for several weeks, beating off every assault of the Federals, and making a valuable addition to the defences of the city. But, in an evil hour, the Confederate authorities decided to send her down the river to recapture Baton Rouge. When her journey was but half completed,

FARRAGUT'S FLEET ENGAGING FORTS JACKSON AND ST. PHILIP AND CONFEDERATE
FLEET ON THE MISSISSIPPI RIVER, BELOW NEW ORLEANS, APRIL 25, 1862

she was pounced upon by several United States vessels, with the "Essex" in the lead. Her engines breaking down, she drifted upon a sand-bank; and the attacking ships pounced her at their leisure, until, with the fire bursting from her port-holes, she was abandoned by her crew, and blazed away until her career was ended by the explosion of her magazine. She had given the Federal fleet some hard tussles, but beyond that had done nothing of the work the Confederates so fondly hoped of her.

While the flotilla of gunboats, led by the "Essex," were planning for the destruction of the "Arkansas," a small naval expedition, consisting of three gunboats, was threading its way up the narrow channel of the White River in search of some Confederate batteries said to be on the banks. Within twelve hours from the start, the sailors learned from a ragged negro, whom they captured on the shore, that the Confederates had powerful batteries only five miles farther up, and that the river channel was obstructed by sunken vessels. Anchor was cast for the night; and in the morning the troops accompanying the expedition were landed, and plunged into the forest with the plan of taking the fort by a rush from the rear. The gunboats began a slow advance up the river, throwing shells into the woods ahead of them. The blue-jackets kept carefully under cover; for, though they could see no foe, yet the constant singing of rifle-bullets about the ships proved that somewhere in those bushes were concealed sharp-shooters whose powder was good and whose aim was true. The "Mound City" was leading the gunboats, and had advanced within six hundred yards of the enemy's guns, when a single shot, fired from a masked battery high up the bluffs, rang out sharply amid the rattle of small-arms. It was the first cannon-shot fired by the Confederates in that engagement, and it was probably the most horribly deadly shot fired in the war. It entered the port-casemate forward, killed three men standing at the gun, and plunged into the boiler. In an instant the scalding steam came hissing out, filling the ship from stem to stern, and horribly scalding every one upon the gun-deck. The deck was covered with writhing forms, and screams of agony rang out above the harsh noise of the escaping steam and the roar of battle outside. Many were blown overboard; more crawled out of the port-holes, and dropped into the river to escape the scalding steam, and struggling in the water were killed by rifle-balls or the fragments of the shells that were bursting all around. The helpless gunboat turned round and round

in the stream, and drifted away, carrying a crew of dead and dying men. So great was the horror of the scene, that one of the officers, himself unhurt, who saw his comrades thus tortured all about him, went insane.

While this scene was going on before the fort, the Union troops had come up behind it, and with a cheer rushed over the breastworks, and drove the garrison to surrender. The Confederate banner fell from the staff, and the stars and stripes went up in its place. But how great was the price that the Federals had to pay for that victory! That night, with muffled drums, and arms reversed, the blue-jackets carried to the grave fifty-nine of their comrades, who twelve hours before were active men. With three volleys of musketry the simple rites over the sailors' graves were ended; and those who were left alive, only said with a sigh, "It is the fortune of war."

CHAPTER XV.

ON TO VICKSBURG.—BOMBARDMENT OF THE CONFEDERATE STRONGHOLD.—PORTER'S CRUISE IN THE FORESTS.

WHILE the smaller gunboats were thus making dashes into the enemy's country, destroying batteries and unfinished war-vessels, and burning salt-works, the heavier vessels of the fleet were being massed about Vicksburg, and were preparing to aid the army in reducing that city to subjection. We need not describe the way in which Gen. Grant had been rushing his troops toward that point, how for weeks his engineers had been planning trenches and approaches to the Confederate works, until toward the middle part of June, 1863, the people in that city found themselves hemmed in by a huge girdle of trenches, batteries, and military camps. Gen. Pemberton, with his army of Confederate soldiers, had been forced backward from point after point, until at last he found himself in Vicksburg, with the prospect of a long siege before him, and no way to get past the inexorable lines of blue that surrounded him. It is true that he had a wonderfully strong position, and many were the tongues that said Vicksburg could never be taken. But though stronger than Sebastopol, stronger than the Rock of Gibraltar, Vicksburg was destined to fall before that mighty army that encircled it, and was slowly starving the city into subjection.

But the Union soldiers, looking from their camps toward the Confederate citadel, saw that they had before them some severe work before that flag that flaunted over the city should be replaced by the stars and stripes. The city stands on a towering bluff high above the eastern bank of the Mississippi River. On that frowning height the busy hands of Pemberton's soldiers had reared mighty batteries, that commanded the Mississippi for miles up and down stream. To think of carrying the works by assault, was madness. Sherman had tried, and was beaten back with terrible loss. Then Grant, with nearly twenty thousand men, and with the co-operation of the river-flotilla, came upon the stage, and determined to take the city though it kept him at bay for months.

All imaginable plans were tried to get the army below the city; for Grant's command had come down from Cairo, and were at the northern and most impregnable side of the enemy's works. As at Island No. 10, a sharp bend in the river made a long peninsula right under the Confederates' guns. Grant, remembering the plan adopted before, set to work to cut a canal through the peninsula, so that the gunboats and transports might get below the forts. Twelve hundred negroes worked with a will upon this ditch for weeks. Then came a terrible rain-storm: the swollen, muddy torrent of the river broke in upon the unfinished canal, and that work was wasted. Then a new plan was suggested, this time by Commodore David Porter, who all through the war showed the greatest delight in taking his big gunboats into ditches where nothing larger than a frog or musk-rat could hope to navigate, and then bringing them out again safe after all.

The country back of Vicksburg was fairly honeycombed with shallow lakes, creeks, and those sluggish black streams called in the South bayous. Porter had been looking over this aqueous territory for some time, and had sent one of his lieutenants off in a steam-launch to see what could be done in that network of ditches. When the explorer returned, he brought cheering news. He was confident that, with tugs and gangs of axemen clearing the way, the gunboats could be taken up the Yazoo River, then into a wide bayou, and finally through a maze of small water-ways, until they should reach the Mississippi again below the Vicksburg batteries. Then the transports could follow, the troops could march down the other side of the river, be met by the transports, ferried across, and take Vicksburg

on the flank. It was a beautiful plan; and Porter went to Grant with it, full of enthusiasm.

Gen. Grant considered the matter for some time, but finally gave his consent, and detailed a number of blue-coated soldiers to aid Porter's blue-jackets in the work. They first cut the levees, and let the mighty tide of the Mississippi sweep in, filling the bayous to the brim, and flooding all the country round about. Then the gunboats plunged in, and were borne along on the rushing tide until they brought up, all standing, against the trunks of trees, or had their smoke-stacks caught by overhanging branches.

Then came the tug of war; and the axemen were called to the front, and set to work. They chopped their way along for some distance; the rapid current from the river banging the vessels against the trees and stumps, until all the standing rigging and light cabins were swept away. After a good deal of work they saw before them a broad river, wide enough for two vessels to steam abreast. Soon they drifted out into it, and the commanding officer sang out cheerily, "On to Vicksburg, boys, and no more trees to saw." And so they steamed on, thinking how neatly they should take the "gray-coats" in the rear, when suddenly a bend in the river showed them, just ahead, a fort in the middle of the river, with the channel blocked on either side. That was a surprise. The works were new, and the water was still muddy about the sunken steamers. Clearly the wily Pemberton had heard of this inland naval expedition, and was determined to check it effectually.

The gunboats backed water, and crowded in confused groups. The gunners in the fort took hurried aim, and pulled the lanyards of their cannon, forgetting that those pieces were not loaded. It was hard to tell which party was the more excited at the unexpected meeting. This gave the blue-jackets a chance to collect their thoughts, and in a minute or two the gunboats opened fire; but they were soon convinced that the fort was too much for them, and they turned and crawled back through the woods to the fleet above Vicksburg. Pemberton scored one point for successful strategy.

But, even while this expedition was working its way back to the station of the vessels on the Mississippi, Porter was starting another through a second chain of water-courses that he had discovered. This time he was so sure of getting into the rear of Vicksburg, that he took four of his big

iron-clads, and two light mortar-boats built especially for work in the woods. Gen. Sherman, with a strong army-force, marched overland, keeping up with the gunboats. Admiral Porter, in his Memoirs, gives a graphic picture of this expedition. Back of Vicksburg the country is low, and intersected in every direction by narrow, tortuous bayous, lined on either side by gloomy morasses or majestic forests. Into these little-known water-courses Porter boldly led his ponderous iron-clads; while Sherman, with a detachment of troops, advanced along the shore, keeping as near the flotilla as possible. Seldom have naval vessels been detailed upon so strange a service. For days they steamed on under the spreading branches of trees, that often spanned the bayous in a mighty arch overhead, shutting out all sunlight. For a time this navigation of placid, shady water-ways was pleasant enough; but, as they penetrated farther into the interior, the jackies sighed for the blue waters of the ocean, or even for the turbid current of the Mississippi. The heavy foliage that gave so grateful a shade also harbored all sorts of animals; and coons, rats, mice, and wildcats, that had been driven to the trees for shelter during the prevailing high water, peered down upon the sailors, and often dropped sociably down upon the decks of the vessels gliding beneath.

At some portions of the voyage the flotilla seemed to be steaming through the primeval forest. The bayou was but a few feet wider than the gunboats, and its banks were lined by gnarled and knotted old veterans of the forest,—live oaks, sycamore, and tupelo gum trees that had stood in majestic dignity on the banks of the dark and sullen stream for centuries. Sometimes majestic vistas would open; broad avenues carpeted with velvet turf, and walled in by the massive tree trunks, extending from the banks of the stream far back into the country. Again, the stately forests would be replaced by fields of waving corn or rice, with the tops of a row of negro cabins or the columned front of a planter's house showing in the distance. Then, as the flotilla steamed on, this fair prospect would disappear, and be replaced by noisome cypress brakes, hung thick with the funereal Spanish moss, and harboring beneath the black water many a noxious reptile.

So through the ever-changing scenery the gunboats moved along, making but little progress, but meeting with no serious obstacle, until one morning there appeared on a bit of high ground, some yards in

advance of the leading gunboat, an army officer mounted on an old white horse. It was Gen. Sherman, and his troops were in camp near by. He greeted the naval forces cheerily, and, rallying Porter on the amphibious service into which his gunboats had been forced, warned him that he would soon have not a smoke-stack standing, nor a boat left at the davits.

"So much the better," said the undaunted admiral. "All I want is an engine, guns, and a hull to float them. As to boats, they are very much in the way."

A short time only was spent in consultation, and then Sherman with his forces left the bayou and plunged into the interior, first warning Porter that he would have a hard time getting any farther, even if the enemy did not come down and surround him. But Porter was not the man to abandon the advance, so long as there was water enough to float his gunboats. Besides, he had gained some ideas regarding navigation in the forests, that enabled him to move his fleet forward with more celerity than at first. When a tree blocked the course of the iron-clads, they no longer stopped to clear it away by work with the axes; but, clapping on all steam, the powerful rams dashed at the woody obstruction, and with repeated blows soon knocked it out of the way.

Soon after leaving Sherman, Porter saw that the difficulties he had thus far met and conquered were as nothing to those which he had yet to encounter. The comparatively broad stream up which he had been steaming came to an end, and his further progress must be through Cypress Bayou, a canal just forty-six feet wide. The broadest gunboat was forty-two feet wide, and to enter that narrow stream made retreat out of the question: there could be no turning round to fly. The levees rose on either side of the narrow canal high above the decks of the iron-clads, so that the cannon could not be sufficiently elevated to do effective work in case of an attack. But there were nine feet of water in the great ditch; and that was enough for Porter, who pressed boldly on.

The country into which the combined military and naval expedition was advancing was in truth the granary of Vicksburg. On all other sides of the beleaguered city, the Federal lines were drawn so closely that the wagons laden with farm produce could not hope to pass. But here, back of the city, and far from the camps of Grant's legions, the work of raising produce for the gallant people of Vicksburg was prosecuted

with the most untiring vigor. The sight, then, of the advancing gunboats aroused the greatest consternation. From the deck of his vessel Porter could see the people striving to save their property from the advancing enemy. Great droves of cattle were being driven away far into the interior; negroes were skurrying in all directions, driving poultry and pigs to the safe concealment of the forest; wagons groaning under the weight of farm and garden produce could be seen disappearing in the distance. What the inhabitants could not save they destroyed, in order that it might not profit the invaders. A short distance from the mouth of the bayou were six thousand bales of cotton piled up on opposite sides of the stream, ready to be taken aboard a steamer when the war should end. As the gunboats advanced slowly, making little headway against the two-knot current of the bayou, Porter saw two men, carrying lighted pine-knots, dash up to the cotton, and begin to set it afire. The admiral looked on in disgust. "What fools these mortals be!" said he to an officer standing at his side; "but I suppose those men have a right to burn their own cotton, especially as we have no way of preventing them."

"I can send a howitzer shell at them, sir," said the officer, "and drive them away."

But to this Porter demurred, saying that he had no desire to kill the men, and that they might do as they liked with their own. Accordingly the officers quietly watched the vandals, until, after twenty minutes' work, the cotton was blazing, and a dense mass of smoke cut off all vision ahead, and rose high in the air. Then Porter began to suspect that he had made a mistake. The difficulties of navigation in the bayou were great enough, without having smoke and fire added to them. Yet to wait for the cotton to burn up might cause a serious delay. On the high bank of the bayou stood a negro begging the sailors to take him aboard.

"Hallo, there, Sambo!" sung out Porter, "how long will it take this cotton to burn up?"

"Two day, massa," responded the contraband; "p'raps tree."

That ended the debate. "Ring the bell to go ahead fast," said the admiral to the pilot; and away went the flotilla at full speed, plunging into the smoke and fire. It was a hot experience for the sailors. The

heavy iron-clads made but slow progress, and were scorched and blistered with the heat. The ports were all shut down, and the crews called to fire-quarters, buckets in hand. To remain on deck, was impossible. Porter and his captain made the trial, but had hardly entered the smoke when the scorching heat drove both into the shelter of an iron-covered deck-house. The pilot standing at the wheel seized a flag, and, wrapping it about his face and body, was able to stay at his post. As the flames grew hotter, the sailors below opened the main hatch, and, thrusting up a hose, deluged the deck with floods of water. So, without a man in sight, the huge iron ship moved along between the walls of flame. Suddenly came an enormous crash. The gunboat shivered, and for a moment stood still; then, gathering headway, moved on again, though with much ominous grating beneath her keel. Soon after she passed out of the smoke and heat, and all hands rushed on deck for a whiff of the fresh, cool air. Their first thought was of the cause of the collision; and, looking eagerly astern, they saw a heavy bridge, about fifty feet of which had been demolished by the tremendous power of the ram. This gave Porter a hint as to the force he had at his command; and thereafter bridges were rammed as a matter of course whenever they impeded the progress of the iron-clads. The astonishment of the people along the shore may well be imagined.

The great and formidable obstacles that stood in the path of the squadron were, as a rule, overcome by the exertion of the great powers of the steam-driven, iron-plated vessels; but at last there came a check, that, though it seemed at first insignificant, terminated the sylvan manœuvres of the iron-clad navy. After running the gantlet of the burning cotton, butting down trees, and smashing through bridges, the column entered a stretch of smooth water that seemed to promise fair and unobstructed sailing. But toward the end of this expanse of water a kind of green scum was evident, extending right across the bayou, from bank to bank. Porter's keen eye caught sight of this; and, turning to one of the negroes who had taken refuge on the gunboat, he asked what it was. "It's nuffin' but willows, sah," he replied. "When de water's out of de bayou, den we cuts de willows to make baskets with. You kin go troo dat like a eel."

Satisfied with this explanation, the admiral ordered the tug which

led the column to go ahead. Under a full head of steam, the tug dashed into the willows, but began to slow up, until, after going about thirty yards, she stopped, unable to go forward or back. Undaunted by this unexpected resistance, Porter cried out that the "Cincinnati" would push the tug along; and the heavy gunboat, withdrawing a short distance to gain headway, hurled herself forward, and dashed into the willows with a force that would have carried her through any bridge ever built. But the old fable of the lion bound down by the silken net was here re-enacted. The gunboat did not even reach the tug. The slender willow-shoots trailed along the sides, caught in the rough ends of the iron overhang, and held the vessel immovable. Abandoning the attempt to advance, the gunboat strove to back out, but to no avail. Then hooks were rigged over the side to break away the withes, and men slung in ropes alongside vigorously wielded sharp cutlasses and saws; but still the willows retained their grip. Matters were now getting serious; and, to add to Porter's perplexity, reports came in that Confederate troops were coming down upon him. Then he began to lose confidence in his iron-clads, and wish right heartily for Sherman and his soldiers, of whose whereabouts he could gain no knowledge. The enemy did not leave him long in doubts as to their intention, and soon began a vigorous fire of shells from the woods. Porter stopped that promptly by manning his mortars and firing a few shells at a range measured by the sound of the enemy's cannon. The immediate silence of the hostile batteries proved the accuracy of the admiral's calculations, and gave him time to devise means for escaping from his perilous position.

How to do it without aid from Sherman's troops, was a difficult question; and in his perplexity he exclaimed aloud, "Why don't Sherman come on? I'd give ten dollars to get a telegram to him." The admiral was standing at the moment on the bank of the bayou, near a group of negroes; and an athletic-looking contraband stepped forward, and, announcing himself as a "telegram-wire," offered to carry the note "to kingdom kum for half a dollar." After sharply cross-questioning the volunteer, Porter wrote on a scrap of paper, "DEAR SHERMAN,—Hurry up, for Heaven's sake. I never knew how helpless an iron-clad could be, steaming around through the woods without an army to back her."

"Where will you carry this?" asked Porter, handing the despatch to the negro.

"In my calabash kiver, massa," responded the messenger with a grin; and, stowing the paper away in his woolly hair, he darted away.

The telegram being thus despatched, Porter again turned his attention to the willows; and, a fortunate rise in the water having occurred, he was able to extricate his vessels and begin his retreat down the bayou. He was somewhat perplexed by the silence of the Confederates, from whom he had heard nothing since his mortars silenced their masked batteries. The conundrum was solved by the sound of wood-chopping in the forests ahead, and the discovery shortly after of two heavy logs lying athwart the bayou, and stopping the progress of the vessels. An hour's hard work with axe and saw removed this obstruction; and the tug, slipping through first, shot ahead to prevent any more tree-felling. The loud reports of her howitzer soon carried back to the fleet the news that she had come up with the enemy, and was disputing with them the right to the bayou.

The difficulties of the retreat were no less great than those of the advance, with the intermittent attacks of the enemy added. The work of removing heavy, soggy logs, half submerged beneath the black waters of the bayou, clearing away standing trees, and breaking up and removing Red-river rafts, wearied the sailors, and left them little spirit to meet the enemy's attacks. The faint sounds of wood-chopping in the distance told too well of the additional impediments yet in store for the adventurous mariners. Scouts sent out reported that the enemy had impressed great gangs of negroes, and were forcing them to do the work of felling the trees that were to hem in Uncle Sam's gunboats, for the benefit of the C.S.A. But the plans of the Confederates to this end were easily defeated. Porter had not only many willing arms at his command, but the powerful aid of steam. When the gunboats came to a tree lying across the bayou, a landing party went ashore and fastened large pulleys to a tree on the bank. Then a rope was passed through the block; and one end having been made fast to the fallen tree, the other was taken aboard a gunboat. The word was then given, "Back the iron-clad hard;" and the fallen monarch of the forest was soon dragged across the bayou and out of the way. So expert did the jackies become in this work, that they were soon able to clear away the trees faster than the enemy could fell them. The tug then went ahead, and for a time put an end to further tree-chopping, and captured several of the negro axemen.

From the captured contrabands Porter learned that the attempt to cut off his retreat was directed by the military authorities at Vicksburg. This was a startling revelation. He had thought that the Confederates were in entire ignorance of his movement; and now it turned out that the wily Pemberton had kept a sharp lookout on the marauding gunboats, and was shrewdly planning for their capture. While Porter was pondering over this new discovery, a party of scouts came in, bringing in four captured Confederates, two of whom were commissioned officers. The commanding officer, a mere boy, was somewhat chagrined at being captured, but felt confident that his friends would recapture him shortly. Porter politely asked him to take a glass of wine and some supper.

"I don't care if I do," responded the youngster; "and I have the less compunction in taking it, as it belongs to us anyhow. In two hours you will be surrounded and bagged. You can't escape. How in the Devil's name you ever got here, is a wonder to me."

Porter smiled pleasantly, and, helping his guests lavishly, proceeded to question them on the numbers and position of the Confederate troops. He learned that a large body of troops had been sent out to surround the iron-clads, and were even then closing in upon the intruders. The danger was imminent, but Porter showed no trepidation.

"How far off are your troops?" he asked.

"About four miles. They will bag you at daylight," was the confident response.

"Well, gentlemen," said the admiral, "Gen. Sherman is now surrounding your forces with ten thousand men, and will capture them all before daylight." And so saying the admiral went on deck, leaving his captives lost in wonder; for the information carried to the Vicksburg authorities had made no mention of troops.

Though Porter had put on so bold a front before his captives, he really felt much anxiety for the fate of his iron-clads. He could hear nothing from Sherman, who might be thirty miles away for all he knew. Accordingly he retraced his course for a few miles, to throw the enemy off the scent, and the next day began again his descent of the bayou, bumping along stern foremost amid snags and standing trees. The enemy soon gave evidence that he was on the watch, and opened fire with his artillery from the rear. At this one gunboat steamed back and silenced the artillery

for a time, after which she rejoined her fellows. Sharp-shooters in the thickets along the levee then began to grow troublesome; and the whistle of the rifle-balls, with an occasional *ping* as one struck the smoke-stack, warned the sailors that the deck of a gunboat in a narrow canal was no safe place in time of war. The high levees on either side of the bayou made it impossible to use the guns properly: so Porter turned them into mortars, and, by using very small charges of powder, pitched shells up into the air, dropping them into the bushes back of the levee. This somewhat checked the fire of the sharp-shooters, but the decks were still dangerous places to frequent. A rifle-ball struck Lieut. Wells in the head as he stood talking to Porter; and he fell, apparently dead, upon the deck. The admiral beckoned an officer to come and bear away the body; but the newcomer was also hit, and fell across the body of the first. Porter concluded that the locality was getting rather hot, and gladly stepped behind a heavy plate of sheet-iron, which an old quartermaster brought him with the remark, "There, sir, stand behind that. They've fired at you long enough."

From behind his shield, Porter looked out anxiously at the forces by which he was beleaguered. He could see clearly that the Confederates were increasing in numbers; and, when at last he saw a long gray column come sweeping out of the woods, his heart failed him, and for a moment he thought that the fate of his flotilla was sealed. But at that very moment deliverance was at hand. The Confederates were seen to fall into confusion, waver, and give way before a thin blue line,—the advance guard of Sherman's troops. The negro "telegram-wire" had proved faithful, and Sherman had come on to the rescue.

That ended the difficulties of the flotilla. The enemy, once brought face to face with Sherman's men, departed abruptly; and soon the doughty general, mounted on an old gray horse, came riding down to the edge of the bayou, for a word with Porter. Seeing the admiral on the deck of his gunboat, he shouted out, "Hallo! Porter, what did you get into such an ugly scrape for? So much for you navy fellows getting out of your element. Better send for the soldiers always. My boys will put you through. Here's your little nigger. He came through all right, and I started at once. Your gunboats are enough to scare the crows: they look as if you had got a terrible hammering."

Somewhat crestfallen, Porter remarked, that he "never knew what helpless things iron-clads could become when they got in a ditch, and had no soldiers about." As Sherman declined to come aboard, Porter went below to look after his two prisoners.

"Well, gentlemen," said he, as he entered the cabin, "you were right. We are surrounded by troops."

The two Confederates were greatly exultant, but assured Porter that they would see that he was kindly treated when taken into Vicksburg.

"To Vicksburg!" said he with mock amazement. "Who said any thing of Vicksburg?"

"Why, of course you'll be taken there as a prisoner, now that our men have surrounded you."

"Oh, you are mistaken there!" responded Porter. "The troops by whom I am surrounded are Sherman's boys, six thousand strong." And at this news the chagrined captives subsided, and began to consider the prospects of a trip to the North, and incarceration in one of the military prisons.

Sherman's army soon came up in force, and went into camp along the road that skirted the levee. As night fell, the scene took on a wild and picturesque air. In the narrow bayou lay the gunboats, strung out in single file along a line of half a mile. They bore many signs of the hard knocks they had received in their excursion through the woods. Boats, davits, steam-pipes, and every thing breakable that rose above the level of the deck, had been swept away by the overhanging boughs, or dashed to pieces by falling trees. The smoke-stacks and wheel-houses were riddled by the bullets of the Confederate sharp-shooters. The decks were covered with rubbish of all kinds, and here and there was a fissure that told of the bursting of some Confederate shell. The paint was blistered, and peeling off, from the effects of the cotton-fire through which the fleet had dashed.

On the shore blazed the camp-fires of Sherman's troops; and about the huge flaming piles the weary soldiers threw themselves down to catch a moment's rest, while the company cooks prepared the evening meal. Many of the idle soldiers strolled down to the edge of the bayou, and, forming a line along the levee, began chaffing the sailors on the ludicrous failure of their attempt to perform naval evolutions in a swamp.

THE LAUNCHING OF THE BATTLESHIP "IOWA"

"What's gone with your boats, Jack?" sung out one tall fellow in cavalry garb. "Been in dry-dock for repairs?"

"How do you like playing mud-turtle?" said another. "Better stick to salt water after this."

"Don't go bush-whacking again, unless you have the soldiers with you. You look as if your mothers didn't know you were out." And at this a yell of approval went up all along the line, while the badgered sailors growled and tried to make sharp retorts to the stinging ridicule of the landmen.

So ended this memorable gunboat expedition. It is unparalleled in the history of warfare. The feats performed by the unwieldy iron-clads in the narrow bayous gained for them, from Lincoln, the title of "web-footed" gunboats. They had traversed shallow and tortuous channels; they had cleared their path of trees, snags, and even bridges; they had run the gantlet of flaming cotton-bales and Confederate bullets. After meeting and overcoming so many obstacles, their final stoppage by a thicket of pitiful willow-shoots irritated the blue-jackets and their commander extremely. Porter had penetrated so far into the Yazoo country, that he could see how great damage could be inflicted upon the Confederates, if the expedition could but be carried out successfully. He had definite information to the effect, that, at Yazoo City, the Confederates had a thriving shipyard, at which they were pressing forward the construction of steam-rams with which to sweep the Mississippi. To reach that point and destroy the vessels, would have been a service thoroughly in accord with his tastes; but the willows held him back. However, he was able to console himself with the thought that the rams were not likely to do the Confederates any immediate service; for a truthful contraband, brought in by the Union scouts, informed the admiral that "dey has no bottom in, no sides to 'em, an' no top on to 'em, sah; an' dere injines is in Richmon'."

When the dangers encountered by the gunboats during this expedition are considered, the damage sustained seems surprisingly small. Had the Confederates acted promptly and vigorously, the intruders would never have escaped from the swamps into which their temerity had led them. A few torpedoes, judiciously planted in the muddy bed of the bayou, would have effectively prevented any farther advance. More than once the Confederates posted their artillery within effective range, and opened

a rapid and well-directed fire upon the gunboats, but erred in using explosive shells instead of solid shot. "They were evidently greenhorns," wrote Porter, exulting over his narrow escape, "and failed to understand that we were iron-clad, and did not mind *bursting-shell*. If they had used solid shot, they might have hurt us." The infantry forces of the enemy were ample to have given the marauding gunboats a vast deal of trouble, if the Confederate officers had been enterprising, and had seized upon the opportunities afforded them. Night after night the flotilla lay tied up in the centre of a narrow bayou, with the levees towering so high above the gunboats' ports, that the cannon were useless. At such a time, a determined assault by a body of hostile infantry could hardly have been resisted. Such an attack was the danger which Porter most feared throughout the expedition, and he nightly made preparations for a desperate resistance. The widest part of the bayou was chosen for the anchorage, in order that a strip of water at least four feet wide might separate the gunboats from the shore. The sides of the iron-clads were then greased, and the guns loaded with grape, and elevated as much as possible. Landing parties with howitzers were sent ashore, and posted so as to enfilade any attacking force; scouts were sent out in all directions; and the crews of the gunboats slept at their quarters all night, ready for action at the first alarm. But it is doubtful whether even these elaborate precautions could have saved the flotilla, had the Confederates brought one regiment to the assault. However, the enemy let the golden moment pass; and, after suffering the agonies of suspense for several days, Porter at last saw his gunboats safely anchored by the side of Sherman's protecting regiments.

Sherman and Porter held a consultation that night, and concluded that it was useless to try to get around Vicksburg by hauling the gunboats through the woods; and the following morning the flotilla started back to the Union headquarters on the Mississippi.

Gen. Grant was beginning to get impatient. Weeks had passed away, and there were still no gunboats or transports below the Vicksburg batteries to aid him in carrying out his military plans. He held a long consultation with Porter, the outcome of which was that the admiral decided to run his gunboats and transports right through the fire of the Confederate guns.

But, before sending a vessel through, Porter thought that he would test

the accuracy of the Confederate gunners by giving them a dummy to fire at. He took a large flat boat, and built it up with logs and lumber until it looked like a powerful ram. Two huge wheel-houses towered amidships, on each of which was painted, in great, staring letters, "Deluded Rebels, cave in." From the open ports, the muzzles of what appeared to be heavy rifles protruded; though the guns that seemed so formidable were really only logs of wood. Two high smoke-stacks, built of empty pork-barrels, rose from the centre of this strange craft; and at the bottom of each stack was an iron pot, in which was a heap of tar and oakum that sent forth volumes of black smoke when lighted. One dark night the fires in this sham monster were lighted, and she was towed down to the Confederate batteries, and set drifting down the river. She was quickly discovered, and the batteries on the bluffs opened on her with a roar. There was nothing about the dummy to be hurt, however; and it was impossible to sink her. So she sailed majestically through the plunging hail of solid shot, and past the terrible batteries that were thought to be a match for any thing afloat. The Confederates in the trenches looked at each other in astonishment and dismay. Word was sent to Gen. Pemberton that a powerful Yankee iron-clad had passed the batteries unhurt, and was speeding down the stream. The General's first thought was of a gunboat, the "Indianola," lately captured from the Federals, and now being converted into an iron-clad ram. She must be saved from recapture, even if it should be necessary to destroy her. Word was hurriedly sent down the river that a formidable ram was bearing down upon the "Indianola;" and, if the latter vessel was not in condition to do battle, she should be blown up. Accordingly, while the dummy ram, caught in an eddy of the river, was whirling helplessly around just below Vicksburg, the Confederates put the torch to their new war-vessel, and she was soon a heap of ashes. Porter's little joke was a good one for the United States.

But all the time that the Union navy was making these futile attempts to get the better of the wily general who held the fort at Vicksburg, a constant bombardment of the city was kept up. From gunboats and land batteries, shells were hurled into the streets of the town, tearing down houses, killing men, women, and children, and driving the inhabitants to their cellars, or to deep caves dug in the hills. The fire from the Union gunboats was most destructive, for they could drop down to an advantageous point, shell the city until tired, then steam back into safety again.

Cave-digging in the city became a regular business; and caves brought from twenty to fifty dollars, according to their size. They generally consisted of two or three rooms, and people lived in them quite cheerfully during the time that the iron hail was falling in the city's streets.

A Northern woman, who was pent up in Vicksburg during the siege, tells graphically the story of the bombardment:—

“For many nights we have had but little sleep, because the Federal gunboats have been running past the batteries. The uproar when this is happening is phenomenal. The first night the thundering artillery burst the bars of sleep, we thought it an attack by the river. To get into garments, and rush up-stairs, was the work of a moment. From the upper gallery we have a fine view of the river; and soon a red glare lit up the scene, and showed a small boat, towing two large barges, gliding by. The Confederates had set fire to a house near the bank. Another night, eight boats ran by, throwing a shower of shot; and two burning houses made the river clear as day. One of the batteries has a remarkable gun they call ‘whistling Dick,’ because of the screeching, whistling sound it gives; and certainly it does sound like a tortured thing. Added to all this is the indescribable Confederate yell, which is a soul-harrowing sound to hear. I have gained respect for the mechanism of the human ear, which stands it all without injury. The streets are seldom quiet at night: even the dragging about of cannon makes a din in these echoing gullies. The other night we were on the gallery till the last of the eight boats got by. Next day a friend said to H—, ‘It was a wonder you didn’t have your heads taken off last night. I passed, and saw them stretched over the gallery; and grape-shot were whizzing up the street just on a level with you.’ The double roar of batteries and boats was so great, we never noticed the whizzing. Yesterday the ‘Cincinnati’ attempted to go by in daylight, but was disabled and sunk. It was a pitiful sight: we could not see the *finale*, though we saw her rendered helpless.

“Since that day the regular siege has continued. We are utterly cut off from the world, surrounded by a circle of fire. Would it be wise, like the scorpion, to sting ourselves to death? The fiery shower of shells goes on day and night. H—’s occupation, of course, is gone, his office closed. Every man has to carry a pass in his pocket. People do nothing but eat what they can get, sleep when they can, and dodge the shells. There are

PASSING THE VICKSBURG BATTERIES.

three intervals when the shelling stops, — either for the guns to cool, or for the gunners' meals, I suppose, — about eight in the morning, the same in the evening, and at noon. In that time we have to both prepare and eat ours. Clothing cannot be washed, or any thing else done. On the 19th and 22d, when the assaults were made on the lines, I watched the soldiers cooking on the green opposite. The half-spent balls, coming all the way from those lines, were flying so thick that they were obliged to dodge at every turn. At all the caves I could see from my high perch, people were sitting, eating their poor suppers at the cave doors, ready to plunge in again. As the first shell again flew, they dived; and not a human being was visible. The sharp crackle of the musketry-firing was a strong contrast to the scream of the bombs. I think all the dogs and cats must be killed or starved: we don't see any more pitiful animals prowling around. . . . The cellar is so damp and musty, the bedding has to be carried out and laid in the sun every day, with the forecast that it may be demolished at any moment. The confinement is dreadful. To sit and listen as if waiting for death in a horrible manner, would drive me insane. I don't know what others do, but we read when I am not scribbling in this. H—— borrowed somewhere a lot of Dickens's novels, and we re-read them by the dim light in the cellar. When the shelling abates, H—— goes to walk about a little, or get the 'Daily Citizen,' which is still issuing a tiny sheet at twenty-five and fifty cents a copy. It is, of course, but a rehash of speculations which amuses a half-hour. To-day he heard, while out, that expert swimmers are crossing the Mississippi on logs at night, to bring and carry news to Johnston. I am so tired of corn-bread, which I never liked, that I eat it with tears in my eyes. We are lucky to get a quart of milk daily from a family near, who have a cow they hourly expect to be killed. I send five dollars to market each morning, and it buys a small piece of mule-meat. Rice and milk is my main food: I can't eat the mule-meat. We boil the rice, and eat it cold, with milk, for supper. Martha runs the gauntlet to buy the meat and milk once a day in a perfect terror. The shells seem to have many different names. I hear the soldiers say, 'That's a mortar-shell. There goes a Parrott. That's a rifle-shell.' They are all equally terrible. A pair of chimney-swallows have built in the parlor chimney. The concussion of the house often sends down parts of their nest, which they patiently pick up and re-ascend with."

Grant's impassable lines about the beleaguered city soon made starvation more to be feared than even the terrible shells from the cannon of the gunboats. Necessaries of all sorts became wofully scarce in Vicksburg. Five dollars could purchase only a little bit of mule's flesh, hardly enough for a meal for two people. Flour was not to be had at any price. Bread was made of coarse corn-meal or grated peas. The ammunition of the soldiers in the trenches soon began to give out, and the utmost economy was exercised. Many of the soldiers were armed with muskets that required caps, and it was not many days before caps were at a great premium. They were generally smuggled into the city through the Union lines by fleet-footed carriers, who ran a long gauntlet of Union pickets. Many were shot down in the attempt, but more succeeded. One man who brought in sixteen thousand caps, was nine days travelling thirteen miles, and was fired on more than twenty times.

But, though Grant could have starved the city into subjection by simply sitting and waiting, he grew tired of this, and determined to force matters to an issue. The first thing to be done was to get the gunboats and transports past the batteries. The transports were put into shape to stand a cannonade by having their weaker parts covered with cotton-bales; and on one dark night in June, the flotilla started down the river, with the iron-clad gunboats in advance. Admiral Porter led in the "Benton." At eleven o'clock the fleet got under way; and, as the "Benton" came abreast of the first batteries, the alarm was given in the Confederate camp, and a fierce cannonade began. Huge fires were lighted on the shores to light up the river, and make the gunboats visible to the Confederate cannoners. The war-ships swung grandly around the bend, responding with rapid broadsides to the fire of the forts. All the vessels were hit once or oftener. The heavy smoke that accompanies such fierce cannonading hung over the river, cutting off all view of the surroundings from the sailors. The eddy currents of the river caught the steamers, swinging them now this way, now that, until the perplexed pilots knew not which way their vessels were headed. The blue-jackets at the guns worked away cheerily, knowing that enemies were on every side of them, and that, no matter which way their missiles sped, an enemy was to be found. More than one vessel turned completely around; and once, when the rising breeze cleared away the smoke, the pilot of the "Benton" found that he was taking his

ship up-stream again, and was in imminent danger of running down a friendly gunboat." But they all passed on without receiving any severe injuries, and at five o'clock in the morning lay anchored far below the city, ready to begin the attack upon the Confederate batteries at Grand Gulf, which were called "the key to Vicksburg."

CHAPTER XVI.

VICKSBURG SURRENDERS, AND THE MISSISSIPPI IS OPENED.—NAVAL EVENTS ALONG THE GULF COAST.

THE first grand step toward the capture of Vicksburg was made when the river-flotilla followed Porter down the Mississippi, and past the guns of the Confederate batteries. Grant, with his army, had followed along the western bank of the great river; and we now find him ready to cross the river, and move upon the Vicksburg batteries from the south. But, before this could be done, the Confederate works at Grand Gulf must be silenced; and it again happened that the navy was to be the chief factor in the contest. For this new battle all the blue-jackets were ready and anxious. Admiral Porter says that "when daylight broke, after the passage of the fleet, I was besieged by the commanding officers of the gunboats, who came to tell me of their mishaps; but, when I intimated that I intended to leave at Carthage any vessel that could not stand the hammering they would be subject to at Grand Gulf, they suddenly discovered that no damage had been done to their vessels, which, if any thing, were better prepared for action than when they started out!"

The Confederate works at Grand Gulf mounted eighteen guns; and, as they stood upon high bluffs overlooking the river, they were most formidable.

able. It was decided by the Federals that the navy alone should undertake the task of reducing the fortifications,—a decision that was of benefit to the Confederates, for their strongest position was along the river-front. Four of the guns held a raking position up and down the long stretch of muddy water that swirled and eddied by with a current of seven miles an hour.

While the fort had the advantage of position, the gunboats were much stronger in their armament; and the contest was looked forward to as one bound to be desperate. The position of every gun in the batteries, and the size of the garrison, were well known to every commander of a Union vessel; and they made the most careful preparations for the assault.

The Confederates knew that the result of that day's battle would decide the ownership of Vicksburg, and they were prepared to offer the most desperate resistance. The orders at every battery were to use shell alone; and the men were instructed to fire carefully, and only after taking deadly aim. In a high tree just outside the fort a lookout was stationed; and at early daylight, on the morning of the 29th of April, 1863, he signalled that the fleet of gunboats was bearing down upon the works.

Men who were in the fort that morning saw a strange panorama. The stillness was most profound on the shore and on the river. The boats moved slowly and grandly down, not a man in sight, and with no sign of life. The trees up the river were black with Federal spectators; and the chirp of birds was all about the men who stood waiting beside the huge cannon.

Porter went at his work with a vim which made the forest tremble and the river bubble. For the first few minutes the Confederates were appalled by the fierceness of the fire, which stands on record as the fastest in the war; but, when the forts did get down to their work, they went in with a roar that almost deafened the Federal soldiers three miles away. Great shells burst over the gunboats, or, falling into the water close by their sides, threw up columns of water that deluged the decks. The vessels found the greatest difficulty in getting good positions for the swift-eddy current. One moment they were bow on, the next headed down stream, or up, or whirling around in circles. Of course this greatly hurt the aim of the gunners, but it likewise made the vessels poor targets for the Confederates.

Three gunboats—the "Benton," "Tuscumbia," and "Lafayette"—

engaged the upper battery; and nowhere in naval history is found the record of faster firing than was done by these ships. Their huge shells tore away at the walls of earth, throwing up tons of dirt with each explosion, but not seeming to affect the strength of the fort at all. Not a shot entered an embrasure, though many came near it. One of the Confederate artillerists said after the fight, —

“There was not one single minute in all that five hours in which I did not expect death. We all worked away as if in a nightmare, and we all felt that any moment might be our last. The ‘Benton’ fired repeatedly at my gun; and as many as twenty of her shells struck the opening, tearing holes in the parapet ten feet back. Twenty times we were almost buried out of sight under the clouds of dirt, and the loose earth was knee deep around our gun when the fight closed. Not one of us was hit hard enough to draw blood, and yet we all felt ten years older for that five hours’ work. I sighted the gun, and saw fourteen of my shot hit the ‘Benton,’ and six plunge into another.”

The gunboats fought in a way that showed desperate determination. The first gun from the “Lafayette” was answered by a shell which crashed through her side and exploded in a wardroom, knocking every thing into chips. Three times the carpenter came up and reported to the captain that the ship was sinking; and each time the reply was, “Very well, sir: keep right on firing until the guns are under water.” When the ship came out of the fight, she counted up fifty scars.

The long-range firing that was carried on at first did not satisfy the “Mound City.” One particular gunner on the Confederate works seemed to cherish a spite against her; and every time the flame leaped from the muzzle of his gun, a solid shot banged against the gunboat’s side. This was not to be tamely borne; and the “Mound City” rushed up so close to the bank that her bow stirred up the mud, and from that position opened fast and furiously upon the forts with grape and canister. A hail of rifle-bullets fell upon her decks; but she stuck to her post, and succeeded in driving the enemy to the bomb-proofs.

But, with all their pluck and rapid firing, the gunners of the fleet were making no impression on the works. Gen. Grant, who was watching the engagement from a tug in mid-stream, saw this, and determined to rush his soldiers past the fort in transports, while the navy engaged the enemy’s

guns. This was done quickly, and towards night the ships returned to their post up the river, leaving the Confederates in possession of the batteries. But the great point had been gained; and Grant's army was moving on Vicksburg, with nothing to interfere with its besieging operations.

Then began that series of attacks and repulses, of building trenches, paralleling, and advancing steadily, until the lines of the Federals and the Confederates were so close together that the men used to shout jokes and taunts over the breastworks. All the Confederates were known as "Johnnies," and all Union soldiers as "Yanks." Often "Johnny" would call out, "Well, Yank, when are you coming into town?" Sometimes the answer was, "We propose to celebrate the Fourth of July there." The "Johnnies" did not believe this; but it was true, nevertheless, for on July 4 Grant's victorious army marched into Vicksburg. A day or two later the Confederate works at Port Hudson and Grand Gulf were surrendered to the Federals, and the Mississippi was again open for commerce throughout its length.

When the fall of Vicksburg had thus left the river clear, Admiral Porter was ordered to take his fleet up the Red River, and clear away any Confederate works that he might find on the banks of that stream. Gen. A. J. Smith, with a strong body of troops, accompanied him; while Gen. Banks was to march his troops overland from Texas, and join the expedition at Shreveport. For several days the gunboats pressed forward up the crooked stream, meeting with no opposition, save from the sharpshooters who lined the banks on either side, and kept up a constant fire of small-arms.

Shreveport was reached in safety; and, after a short halt, the flotilla started again on their voyage up the river. They had proceeded but a short distance when a courier came galloping down the river's bank, waving a despatch, which he handed to Admiral Porter.

"The despatch read, 'Gen. Banks badly defeated; return.' Here was a dilemma to be placed in, — a victorious army between us and our own forces; a long, winding, shallow river wherein the vessels were continually grounding; a long string of empty transports, with many doubtful captains, who were constantly making excuses to lie by or to land (in other words, who were trying to put their vessels into the power of the Confederates); and a thousand points on the river where we could be attacked with great advan-

tage by the enemy ; and the banks lined with sharp-shooters, by whom every incautious soldier who showed himself was shot."

But, though the admiral clearly saw all the dangers he was exposed to, and which he recounts in the foregoing paragraph, he did not propose to return, but pressed forward. He soon reached the scene of battle, and with the big guns of his boats covered the retreat of the troops ; then, having done all there was to be done, started down the river.

But now came the great trouble of the whole expedition. Those Southern rivers are accustomed in summer to fall rapidly until they become mere dry ditches, with a narrow rivulet, hardly deep enough to float a row-boat, flowing down the centre. This was the summer season, and the Red River was falling fast. The banks swarmed with gray-coated soldiery, anxious to be on hand to capture the ships. At Grand Écore the "East-port" became unmanageable, and was blown up. The fleet continued on its way quietly, until a serious obstacle was met. Admiral Porter writes :—

"One of the 'Cricket's' guns was mounted on the upper deck forward, to command the banks ; and a crew of six men were kept stationed at it, ready to fire at any thing hostile.

"We went along at a moderate pace, to keep within supporting distance of each other. I was sitting on the upper deck, reading, with one eye on the book and the other on the bushes, when I saw men's heads, and sang out to the commanding officer, Gorringe, 'Give those fellows in the bushes a two-second shell.' A moment after the shell burst in the midst of the people on the bank.

"'Give them another dose,' I said, when, to my astonishment, there came on board a shower of projectiles that fairly made the little 'Cricket' stagger. Nineteen shells burst on board our vessel at the first volley. It was the gun-battery of which our prisoner had told us. We were going along at this time about six knots an hour ; and, before we could fire another gun, we were right under the battery and turning the point, presenting the 'Cricket's' stern to the enemy. They gave us nine shells when we were not more than twenty yards distant from the bank, all of which burst inside of us ; and, as the vessel's stern was presented, they poured in ten more shots, which raked us fore and aft.

"Then came the roar of three thousand muskets, which seemed to strike every spot in the vessel. Fortunately her sides were musket-proof.

"The 'Cricket' stopped. I had been expecting it. How, thought I, could all these shells go through a vessel without disabling the machinery? The Rebels gave three cheers, and let us drift on: they were determined to have the whole of us. They opened their guns on the two pump-boats, and sunk them at the first discharge. The poor negroes that could swim tried to reach the shore; but the musketeers picked off those that were in the water or clinging to the wrecks. It was a dreadful spectacle to witness, with no power to prevent it; but it turned out to be the salvation of the 'Cricket.' All this took place in less than five minutes.

"The moment the 'Cricket' received the first discharge of artillery, I went on deck to the pilot-house, saluted by a volley of musketry as I passed along; and, as I opened the pilot-house door, I saw that the pilot, Mr. Drening, had his head cut open by a piece of shell, and the blood was streaming down his cheeks. He still held on to the wheel. 'I am all right, sir,' he said: 'I won't give up the wheel.'

"Gorrige was perfectly cool, and was ringing the engine-room bell to go ahead. In front of the wheel-house, the bodies of the men who manned the howitzer were piled up. A shell had struck the gun, and, exploding, had killed all the crew, — a glorious death for them."

Porter now found himself in a bad fix. His guns could not be elevated enough to bear on the batteries that stood on the crest of the high bluffs. There was nothing to do but to run by at the best possible rate of speed. Suddenly the engine stopped, and the vessel floated helplessly down the stream. Porter rushed below to discover the trouble. In the engine-room stood the engineer leaning heavily against the throttle. Porter shouted at him, but received no reply; then, putting his hand on the man's shoulder, found him dead. The admiral threw the body aside, pulled open the throttle, and the "Cricket" glided along past the batteries to a safe refuge downstream. The other ships came down safely, although more or less cut up; and the flotilla continued its retreat down the stream. For a day or two all went smoothly as a holiday excursion; then came a sudden reverse, that, for a time, seemed to make certain the loss of the entire fleet. At Alexandria the Red-river bottom is full of great rocks that make it impassable except at the highest water. When Porter's gunboats arrived, they found themselves caught in a trap from which there seemed to be no hope of escape. The army was encamped along the banks of the river, and the

soldiers began again their jokes upon Porter's habit of taking gunboats for an overland journey. The army generals began to get impatient, and advised Porter to blow up his ships, as the troops must soon march on and leave him. Porter was sick in bed, but this suggestion aroused him. "Burn my gunboats!" he cried, springing to his feet. "Never! I'll wait here for high water if I have to wait two years." And, indeed, it began to look as though he would be forced to wait nearly that long.

BAILEY'S DAM ON THE RED RIVER.

In this time of suspense, there arose a man equal to the emergency. A certain Lieut.-Col. Bailey, who had been a Wisconsin lumberman, came to Porter, and suggested that a dam should be built to raise the water fourteen feet above the falls. Porter jumped at the suggestion, and eight thousand men were set to work.

"It will take too much time to enter into the details of this truly wonder-

ful work," writes Admiral Porter. "Suffice it to say that the dam had nearly reached completion in eight days' working-time, and the water had risen sufficiently on the upper falls to allow the 'Fort Hindman,' 'Osage,' and 'Neosho' to get down and be ready to pass the dam. In another day it would have been high enough to enable all the other vessels to pass the upper falls. Unfortunately, on the morning of the 9th instant the pressure of water became so great that it swept away two of the stone barges which swung in below the dam on one side. Seeing this unfortunate accident, I jumped on a horse, and rode up to where the upper vessels were anchored, and ordered the 'Lexington' to pass the upper falls if possible, and immediately attempt to go through the dam. I thought I might be able to save the four vessels below, not knowing whether the persons employed on the work would ever have the heart to renew their enterprise.

"The 'Lexington' succeeded in getting over the upper falls just in time, the water rapidly falling as she was passing over. She then steered directly for the opening in the dam, through which the water was rushing so furiously that it seemed as if nothing but destruction awaited her. Thousands of beating hearts looked on, anxious for the result. The silence was so great as the 'Lexington' approached the dam, that a pin might almost be heard to fall. She entered the gap with a full head of steam on, pitched down the roaring torrent, made two or three spasmodic rolls, hung for a moment on the rocks below, was then swept into deep water by the current, and rounded to safely into the bank. Thirty thousand voices rose in one deafening cheer, and universal joy seemed to pervade the face of every man present."

After the dam was repaired, the rest of the fleet passed down safely.

With the escape of the Red-river flotilla, the career of Admiral Porter on the rivers ended. Indeed, there was but little work for the river navy remaining. The Mississippi, Tennessee, and Cumberland Rivers were opened; and the Confederate works on the smaller streams were unimportant, and could be left to fall with the fall of the Confederacy, which was near at hand. There was work for fighting sea-captains along the Atlantic coast, and thither Admiral Porter was ordered. He will re-appear at the bombardment of Fort Fisher.

An event which caused the greatest excitement in naval circles at this time, and which for courage and dash has probably never been equalled in

Copyright, 1864, by MAX JACOBY & CO.

ENGAGEMENT BETWEEN THE U. S. FLAGSHIP "HARTFORD" AND CONFEDERATE IRONCLAD
"TENNESSEE," MOBILE BAY, AUGUST 5, 1864

the history of the world, was the run of the Confederate privateer "Florida" past the United States' fleet blockading the harbor of Mobile. The "Florida" was originally a merchant-ship, known as the "Oreto;" and under that name she sailed from Liverpool, carrying a peaceful cargo, and manned by sailors who had no idea that any thing beyond a peaceable voyage was planned. She was commanded by an English sea-captain; and, although the United States consul at Liverpool looked on her with some suspicion, yet he could find no pretext upon which to oppose her departure.

Hardly had the ship passed the mouth of the Mersey, when her course was shaped for Nassau, the haven of privateers and blockade-runners. At Nassau several officers of the Confederate navy were living; and from the anxiety with which they scanned the horizon day after day, through their telescopes, it would seem that they were watching for some friendly craft. The "Oreto" arrived safely at Nassau; and a young gentleman who had come with her made all possible haste ashore, and delivered to the watchful gentlemen in the town certain letters, which made them first look with the greatest satisfaction at the newly arrived ship, and then begin again their outlook for vessels. The letters were from Capt. Bulloch, the agent in London of the Confederacy; and by them he notified his brother naval officers that he delivered to them the "Oreto," an admirably built ship, suited for an armed cruiser. "It has been impossible to get the regular battery intended for her on board," wrote Capt. Bulloch; "but I have sent out four seven-inch rifled guns, with all necessary equipments, in the steamship 'Bahama,' bound for Nassau."

So here were the naval officers and their ship, but the guns were yet to come; and, when they did come, some shrewd planning would be necessary to get the guns mounted without alarming the British authorities. By the time the "Bahama" arrived, the plans were all made. As the steamer came up to the dock, a small schooner slipped alongside, and eight or ten heavy cases were transferred from the larger vessel's hold to the deck of the coaster. Then the little vessel sailed over to Green Cay, a desert island about sixty miles from Nassau, where she was soon joined by the "Oreto." There the work of changing the peaceful merchantman "Oreto" into the war-cruiser "Florida" began.

The work of transferring the armament, and mounting the guns, was very laborious. The hot sun of August at the equator poured down upon

them. Exposure and general discomforts told heavily upon them; and before long the yellow-fever, that most terrible scourge of the West Indies, broke out among the men. There was no surgeon on board, and the care of the sick fell upon Capt. Maffitt. Two United States men-of-war were hunting through the West Indies for the vessel they knew was fitting out somewhere amid the coral reefs and sandy, desolate keys. But Maffitt kept up his courage, and before long found himself at sea, with a good stanch ship and crew, that, though short-handed, was made up of the very best material. But he had hardly cut loose from civilization, and started out upon his cruise, when he discovered, that, in the worry and haste of his departure, he had put to sea without rammers or sponges for his guns. He was in a desperate plight. Had the smallest United States man-of-war met the "Florida," the Confederate could not have offered the slightest resistance. She could not have even fired a gun. Capt. Maffitt ran his vessel into Havana in the hopes of being allowed to refit there; but the fortunes of the Confederacy were waning fast, and all nations feared to give it aid or comfort. Seeing no hope, Maffitt determined to dare all things, and make a dash for Mobile through the very centre of the blockading-fleet.

When the "Florida" put out from the harbor of Havana, only four or five men were able to be on deck. The rest, with her commander, were below, deathly sick with yellow-fever. Under the command of a young lieutenant, her course was laid for Mobile; and in a few hours the smoke of the blockading-vessels could be seen rising on the clear air. An English ensign was hoisted, and the fleet ship dashed towards the men-o'-war that lay in wait. A blank cartridge was fired to warn her away, but she paid no heed. Then came a solid shot that ploughed up the water before her bow. As this evoked no response, the whole fleet opened fire with shot and shell. "Had they depressed their guns but a little," said Maffitt afterwards, "the career of the 'Florida' would have ended then and there." But, as it was, she sped on, with no signs of damage save the flying ends of cut cordage. She could not respond to the fire, for but three men remained on her deck. So, silently and grimly, she rushed through the fleet, and finally passed the last frigate. Quarter of an hour later she anchored under the guns of Fort Morgan. She had received eight shots in her hull, and her masts were chipped by dozens of fragments

of shell. After refitting, the "Florida" waited nearly a month for a chance to get out again. Finally the moment arrived; and she made her escape, though chased for four hours by the blockaders. Once on the open sea, she began the regular career of Confederate cruisers, burned unarmed ships, and avoided war-vessels, until she was run down in a neutral port by a Union man-of-war, whose commander acted in utter defiance of all the rules of modern warfare. In the career of the "Florida," after her escape from Mobile, there was nothing of moment; and her capture, treacherous as it was, brought more discredit upon the Northern arms than did her depredations work injury to the Northern merchant-marine.

CHAPTER XVII.

OPERATIONS ABOUT CHARLESTON.—THE BOMBARDMENT, THE SIEGE, AND THE CAPTURE.

WE have now reached the period at which the rapid decline in the prospects of the Confederacy had become apparent, not only to its enemies, but to its friends. Throughout the South the stars and bars floated over only three strongholds of any importance,—Charleston, Mobile, and Wilmington. One after the other these were destined to fall, and their final overthrow was to be the work of the navy. It was no easy task in any one of the three instances to dislodge the Confederates from their positions; for though beaten in the Middle States, driven from the Mississippi, and with their very citadel at Vicksburg in the hands of the Federals, they still fought with a courage and desperation that for a long time baffled the attacks of the Unionists.

From the very opening of the war, Charleston Harbor had been the scene of naval hostilities. The Confederates, looking upon their mouldering wharves, and vessels tugging idly at their chains, then looking out to sea past Fort Sumter, could see the ships of the blockading-squadron maintaining the watchful guard that was slowly reducing the city to penury. What wonder that the blood of the good people of Charleston boiled, and that they built, and hurled against their hated enemy, weird

naval monsters, shapeless torpedo-boats running beneath the water, or huge rams that might even batter in the heavy walls of Fort Sumter!

One attack so made was successful to a certain extent. It was in February, 1864, that an inventive genius in the beleaguered city brought out a steam torpedo-boat. The craft was about twenty-five feet long, shaped like a cigar, built of boiler iron, and propelled by a screw. She had no smoke-stack, and her deck barely rose above the surface of the water. Running out from her bow was a stout spar fifteen feet long, bearing at its end a huge torpedo charged with two hundred pounds of powder. Just before nine o'clock one night, the lookout on the deck of the frigate "Housatonic" saw this strange object approaching the ship. It was a bright night, with no sea on. As yet torpedoes were hardly known, so the lookout took it for a large fish, and simply watched with interest its playful movements. Not until it came so close that no guns could be brought to bear, did any suspicion of danger enter the lookout's mind. Then there was the roll of the alarm-drums; while the men rushed to the side, and poured a fierce fire from small-arms on the mysterious object. The "Housatonic" started her engines, and tried to escape; but, before any headway could be gained, the launch dashed alongside, and a slight jar was felt. Then, with a tremendous roar, a huge column of water was thrown high in air, washing away men and boats from the deck of the war-ship. A hole large enough to drive a horse through was rent in the hull of the ship. Great beams were broken in twain, the heaviest guns were dismounted, and men were hurled fifty feet into the air. In five minutes the ship had gone to the bottom, and boats from other vessels were picking up the crew. The launch escaped in the excitement.

The Union sailor-boys did not let the Confederates outdo them in dash and pluck. One of the cleverest bits of work in the whole war was done by four boat-crews from two men-of-war on the Charleston station. Word had been brought to the blockaders, that, far up a little deep and narrow creek, a large steamship was loading with cotton, expecting to reach the ocean through the labyrinth of inlets that fairly honeycomb the South Carolina coast. Should she once get into that network of water-ways, it would require a whole fleet to catch her; for there was no telling at what point she might emerge.

It was at once determined to try to capture her as she lay at her deck,

and four boats' crews of picked men were sent out on the expedition. It was early evening when they set out; and all through the dark night they pulled away, threading the mazes of the tidal inlets. Just as the eastern horizon was beginning to grow gray with the coming dawn, they came in sight of their destination. Sure enough, there on the bank of the river was a little Southern village, changed into a prosperous town by the blockade-runners that had evidently been making this place a harbor for some time.

All was dark and silent as the grave. Confident in their fancied security, the blockade-runners had all turned in, leaving no one on guard. The steamer was loaded, and ready to sail in the morning; and the thin wreaths of smoke rising from her smoke-stack told that the fires were up. Stealthily the sailors pulled alongside, and clambered on deck. Without a word they stole below, put the crew under guards, and rushed into the engine-room, where they found the engineer dozing on his stool. He was ordered to get under way at once; and, though he looked rather dazed, he obeyed the order. And in fifteen minutes the steamer was speeding down-stream, leaving the old town still asleep.

One man alone of all the townspeople had seen the capture. A negro, hiding behind a pile of lumber on the dock, had watched the whole affair, and, as if struck dumb with astonishment, failed to give the alarm until the steamer was out of sight down the winding stream. The blue-jackets took their capture safely out of the enemy's lines, and the next day it was sent to New York as a prize.

While the navy was keeping the port of Charleston sealed, and every now and then beating back the improvised gunboats that the Confederates sent out in the forlorn hope of breaking through the blockade, the armies of the North were closing in upon the doomed city. All the North cried aloud for the capture of Charleston. It was the city which fired the first gun of the war. Let it be reduced! On every available point of land a Union battery was built. Far out in the swamps back of the city, where it was thought no living thing save reptiles could exist, the soldiers of the North had raised a battery, mounting one two-hundred-pound gun. When a young lieutenant was ordered to build this battery, he looked the ground over, and reported the thing impossible. "There is no such word as impossible," sternly answered the colonel. "Set to work, and call for whatever you need to secure success."

The next day the lieutenant, who was a bit of a wag, made a requisition on the quartermaster for one hundred men eighteen feet high, to wade through mud sixteen feet deep. Pleasantry is not appreciated in war; and

WAR-SHIPS OFF CHARLESTON HARBOR.

the officer was arrested, but soon secured his release, and built the battery with men of ordinary height.

In April, 1862, Admiral Du Pont had lined his iron-clads and monitors up before the beetling walls of Fort Sumter, and had hurled solid shot for hours, with only the effect of breaking away sharp corners and projecting

edges of the fort, but leaving it still as powerful a work of defence as ever. The little monitors exposed to the terrible fire from the guns of Sumter were fairly riddled; and, when the signal was finally made to withdraw from the action, the humblest sailor knew that Charleston would only fall after a siege as protracted and wearisome as that of Vicksburg.

The investment of Charleston lasted from the date of that first attack upon Fort Sumter until 1865. From time to time the war-vessels would throw a few shells into the city, as a reminder to the inhabitants that they were under surveillance. Early in the siege the Swamp Angel, as the big gun back in the swamp was called, began sending hourly messages, in the form of two-hundred-pound shells, into the city. In one quarter, where the shells fell thickest, a severe fire was started, which raged fiercely, driving people from their homes, and reducing whole blocks to ashes; while the deadly shells aided in the work of destruction. But the life of the Swamp Angel, whose shells were the most destructive, was but short; for, after a few days' work, it burst, scattering the sand-bags, of which the battery was built, far and wide over the swamp.

The officers of the army, who were bringing their troops nearer and nearer to the city, expected the iron-clad vessels to steam boldly up the harbor, and compel a surrender of the city; but the naval officers dared not, owing to the torpedoes with which the channel was thickly planted. If Sumter could only be captured, the torpedoes could be searched out and easily removed; and, with this thought in mind, a number of bold sailors fitted out an expedition to attack the fort. Thirty boats, filled with armed men, made their way to the base of the shattered walls of the fort. As they came up, not a sign of life was to be seen about the huge black monster that had so long kept the iron-clads at bay. Rapidly and silently the men swarmed from their boats, and, led by three brave officers, began the ascent of the sloping walls. "The Johnnies are asleep," they whispered to each other: "we have the fort this time." But the Johnnies were wide awake, and waiting behind those grim bastions until the proper moment should arrive. Higher and higher climbed the blue-jackets; and they were just about to spring over the last barrier, when there rose before them a wall of men and a deadly fire of musketry, and a storm of hand-grenades cut their ranks to pieces. Around the corner of the fort steamed a small gunboat, which opened fire on the assailants. The carnage was terrible; and the sailors

were driven back to their boats, leaving two hundred dead and wounded, and three stands of colors, as trophies for the garrison.

After that grapple with the giant fortress, the Federals did not again try to come to close quarters; but, keeping at a distance, maintained a steady fire upon the fort, which drove its defenders from the guns, and enabled the Union troops to throw up batteries upon all the neighboring islands. The fleet then remained on blockading-service until Feb. 18, 1865, when the Confederates evacuated the city, and left the fort to the victorious Federals. Five years after the date when Major Anderson with his little band of soldiers had marched out of Sumter, leaving the fort to the enemy, the same gallant officer returned, and with his own hand hoisted the same tattered flag over the almost ruined fortress, amid salvos of artillery and the cheers of a victorious army and navy.

CHAPTER XVIII.

THE BATTLE OF MOBILE BAY.

THE last two actions of the United States navy in the civil war were destined to be the grandest successes of a long record of daring and successful exploits. Farragut at Mobile, and Porter at Fort Fisher, added to their wondrous careers the cap-sheaves of two victories wrested from apparently unconquerable adversaries.

It was on a bright August morning in 1864 that Admiral Farragut stood on the deck of his stanch frigate the "Hartford," that had borne him through so many desperate battles. Around the flag-ship were clustered the vessels of the Gulf squadron. There was the battered old "Brooklyn," scarred with the wounds of a dozen fights; the "Richmond" and the "Itasca," that received their baptism of fire at the fight below New Orleans. In all there were fourteen wooden vessels and four iron-clad monitors assembled in front of the strongest combination of harbor defences that war-ships ever yet dared attack. Yet Farragut was there that bright summer morning to enter that bay, and batter the forts of the enemy into subjection. To capture the city was not his purpose, — that he left to the army, — but the harbor forts and the great ram "Tennessee" must strike their colors to the navy.

Before arranging for the attack, the admiral made a reconnoissance, the

results of which are thus told by one of his officers: "On the afternoon of the day of our arrival, Admiral Farragut, with the commanding officers of the different vessels, made a reconnoissance on the steam-tender 'Cow-slip,' running inside of Sand Island, where the monitors were anchored, and near enough to get a good view of both forts. On the left, some two miles distant, was Fort Gaines, a small brick-and-earth work, mounting a few heavy guns, but too far away from the ship-channel to cause much uneasiness to the fleet. Fort Morgan was on the right, one of the strongest of the old stone forts, and greatly strengthened by immense piles of sand-bags covering every portion of the exposed front. The fort was well equipped with three tiers of heavy guns, some of them of the best English make, imported by the Confederates. In addition, there was in front a battery of eleven powerful guns, at the water's edge on the beach. All the guns, of both fort and water battery, were within point-blank range of the only channel through which the fleet could pass. The Rebels considered the works impregnable, but they did not depend solely upon them. Just around the point of land, behind Fort Morgan, we could see that afternoon three saucy-looking gunboats and the famous ram 'Tennessee.' The latter was then considered the strongest and most powerful iron-clad ever put afloat; looking like a great turtle, with sloping sides covered with iron plates six inches in thickness, thoroughly riveted together, and having a formidable iron beak projecting under the water. Her armament consisted of six heavy guns of English make, sending a solid shot weighing one hundred and ten pounds, — a small affair compared with the heavy guns of the present time, but irresistible then against every thing but the turrets of the monitors. In addition to these means of resistance, the narrow channel in front of the fort had been lined with torpedoes. These were under the water, anchored to the bottom, and were chiefly in the shape of beer-kegs filled with powder, from the sides of which projected numerous little tubes containing fulminate, which it was expected would be exploded by contact with the passing vessels.

"Except for what Farragut had already accomplished on the Mississippi, it would have been considered a foolhardy experiment for wooden vessels to attempt to pass so close to one of the strongest forts on the coast; but when to the forts were added the knowledge of the strength of the ram, and the supposed deadly character of the torpedoes, it may be imagined that the

coming event impressed the person taking his first glimpse of naval warfare as decidedly hazardous and unpleasant. So daring an attempt was never made in any country but this, and was never successfully made by any commander except Farragut, who in this, as in his previous exploits in passing the forts of the Mississippi, proved himself the greatest naval commander the world has ever seen. It was the confidence reposed in him, the recollection that he had never failed in any of his attempts, and his manifest faith in the success of the projected movement, that inspired all around him."

When the reconnoissance was completed, the admiral called a council of his captains in the ward-room of the "Hartford," and announced that the attack would be made early the following morning. The council over, each commander returned to his ship, there to make ready for the dread business of the morrow. The same writer whom we have before quoted tells how the night before a battle is spent by brave men not afraid of death:—

"At sunset the last order had been issued. Every commanding officer knew his duty, and unusual quiet prevailed in the fleet. The waters of the Gulf rested for a time from their customary tumult, a gentle breeze relieved the midsummer heat, and the evening closed upon us as peacefully as if we had been on board a yachting squadron at Newport. During the early part of the night, the stillness was almost oppressive. The officers of the 'Hartford' gathered around the capacious ward-room table, writing what they knew might be their last letters to loved ones far away, or giving to friends messages and instructions in case of death. There were no signs of fear; but, like brave and intelligent men, they recognized the stern possibilities of the morrow, and acted accordingly.

"But this occupied but little time; and then, business over, there followed an hour of unrestrained jollity. Many an old story was retold, and ancient conundrum repeated. Old officers forgot for the moment their customary dignity, and it was evident that all were exhilarated and stimulated by the knowledge of the coming struggle. Capt. Heywood of the marines proposed a final 'walk-around;' Tyson solemnly requested information as to 'Which would you rather do or go by Fort Morgan?' and all agreed they would prefer to 'do.' La Rue Adams repeated the benediction with which the French instructor at the naval academy was wont to greet his boys as they were going into examination: 'Vell, fellows,

I hope ve vill do as vell as I hope ve vill do.' Finally, Chief Engineer Williamson suggested an adjournment to the forecandle for a last smoke, and the smoking club went forward; but somehow smoke had lost its customary flavor, and, after a few whiffs, all hands turned in, to enjoy what sleep would come."

When the morning dawned, the men were called to quarters, and the advance upon the forts was begun at once. It was a foggy morning, and the ships looked like phantom vessels as they moved forward in line of battle, with the "Brooklyn" in the van. Second came the "Hartford," with the admiral high up in the rigging, where he could overlook the whole scene.

"Nearly every man had his watch in his hand, and waited for the first shot. To us, ignorant of every thing going on above, every minute seemed an hour; and there was a feeling of great relief when the boom of the first gun was heard. This was from the monitor 'Tecumseh,' at forty-seven minutes past six o'clock. Presently one or two of our forward guns opened, and we could hear the distant sound of the guns of the fort in reply. Soon the cannon-balls began to crash through the deck above us, and then the thunder of our whole broadside of twelve Dahlgren guns kept the vessel in a quiver. But as yet no wounded were sent down, and we knew we were still at comparatively long range. In the intense excitement of the occasion, it seemed that hours had passed; but it was just twenty minutes from the time we went below when an officer shouted down the hatchway: 'Send up an army signal-officer immediately: the 'Brooklyn' is signalling.' In a moment the writer was on deck, where he found the situation as follows: The 'Brooklyn,' directly in front of us, had stopped, and was backing and signalling; the tide was with us, setting strongly through the channel, and the stopping of the 'Brooklyn' threatened to bring the whole fleet into collision and confusion; the advance vessels of the line were trying to back to prevent a catastrophe, but were apparently not able to overcome the force of the current; and there was danger not only of collision, but of being drifted on shore."

While the fleet was thus embarrassed and hampered, the gunners in the forts were pouring in their shot thick and fast. On the decks of the ships the most terrible scenes of death were visible. Along the port side the bodies of the dead were ranged in long rows, while the wounded were carried

below, until the surgeon's room was filled to its last corner. One poor fellow on the "Hartford" lost both legs by a cannon-ball, and, falling, threw up both arms just in time to have them carried away also. Strange to say, he recovered from these fearful wounds.

Just as the fight was at its hottest, and the vessels were nearing the line, the passage of which meant victory, there went up a cry from the whole fleet, "The 'Tecumseh!' Look at the 'Tecumseh!'" All eyes were turned on the monitor, and every one saw that she was sinking. She staggered for a moment, and went down with a rush, carrying her brave commander and over a hundred of her crew. A few escaped, the last of whom was the pilot. As the pilot was rushing for the hatchway that led to the open air and to life, he met at the foot of a narrow ladder Commander Craven. Craven stepped back, saying gravely, "After you, pilot;" and the pilot passed out. "There was nothing after me," said he, in relating the story afterwards; "for as I sprang out of the hatchway the water rushed in, carrying all behind me to the bottom."

This terrible sight made the ships stop for a moment in some confusion; but Farragut signalled sternly from his flagship, "Go on," and all advanced again. As the fight grew fiercer, the admiral grew tired of being on the second ship in the line, and ordered the "Hartford" to forge ahead.

"On board a war steamer the engines are directed by the tap of a bell, the wires connected with which lead to the quarter-deck. One stroke of the bell means 'go ahead;' two, 'stop;' three, 'back;' and four, 'go ahead as fast as possible.' Leaning down through the shrouds to the officer on deck at the bell-pull, the admiral shouted, 'Four bells, *eight bells*, SIXTEEN BELLS! Give her all the steam you've got!' The order was instantly transmitted, and the old ship seemed imbued with the admiral's spirit; and running past the "Brooklyn" and the monitors, regardless of fort, ram, gunboats, and the unseen foe beneath, dashed ahead, all alone, save for her gallant consort, the "Metacomet."

But by this time the fleet was well abreast of the forts, and now, pouring out broadside after broadside, they swept along past the terrible ramparts. The Confederate gunboats had found the fight too hot for them, and had fled for shelter, with the exception of the dreaded "Tennessee," which seemed to be holding itself in reserve. It was but a short time before the vessels were safely past the fort, and out of range, floating on the smooth

waters of the inner bay. Then the crews were piped to breakfast, and all hands began to recount their narrow escapes.

But the end was not yet, for the ram "Tennessee" was now ready to try her mettle with the fleet. Lieut. Kinney of the "Hartford" tells graphically the story of the desperate fight that the ram carried on alone against the whole attacking flotilla.

"We were just beginning to feel the re-action following such a season of extreme peril and excitement, when we were brought to our senses by the sharp, penetrating voice of executive officer Kimberly calling all hands to quarters; and a messenger-boy hurried down to us with the word, 'The ram is coming.' Every man hastened to his post, the writer to the quarter-deck, where the admiral and fleet-captain were standing. The cause of the new excitement was evident at once. The 'Tennessee,' as if ashamed of her failure, had left the fort and was making at full speed directly for the "Hartford," being then perhaps a mile and a half distant. The spectacle was a grand one, and was viewed by the Rebel soldiers in both forts, who were now out of range of our guns, and lined the walls. Few audiences have ever witnessed so imposing a sight. The great ram came on for a single-handed contest with the fleet. She was believed to be invulnerable, and had powerful double engines by which she could be easily handled; while our monitors were so slow-gaited that they were unable to offer any serious obstacle to her approach. Farragut himself seemed to place his chief dependence on his wooden vessels. Doubtless the crowd of Confederate soldiers who watched the fight expected to see the 'Tennessee' sink the Yankee vessels in detail, and the chances seemed in its favor. . .

"Meanwhile, the general signal, 'Attack the enemy,' had gone up to the peak of the 'Hartford;' and there followed a general slipping of cables, and a friendly rivalry to see which could quickest meet the foe. The 'Monongahela,' with her artificial iron prow, was bravely in the lead, and struck the Rebel craft amidships at full speed, doing no damage to the ram, but having her own iron prow destroyed, and being otherwise injured. Next came the 'Lackawanna,' with a like result. The huge iron frame of the 'Tennessee' scarcely felt the shock, while the wooden bow of the Union ship was badly demoralized. For an instant the two vessels swung head and stern alongside of each other. In his official report, Capt. Marchand naively remarks:—

“‘A few of the enemy were seen through their ports, who were using *most opprobrious* language. Our marines opened on them with muskets: even a spittoon and a holystone were thrown at them from our deck, which drove them away.’

“The ‘Tennessee’ fired two shots through her bow, and then kept on for the ‘Hartford.’ The two flag-ships approached each other, bow to bow. The two admirals, Farragut and Buchanan, had entered our navy together as boys, and up to the outbreak of the war had been warm friends. But now each was hoping for the overthrow of the other; and, had Buchanan possessed the grit of Farragut, it is probable that moment would have witnessed the destruction of both vessels. For had the ram struck us square, as it came, bows on, it would have ploughed its way half through the ‘Hartford;’ and, as we sank, we should have carried it to the bottom, unable to extricate itself. But the Rebel admiral was not desirous of so much glory; and, just as the two vessels were meeting, the course of the ‘Tennessee’ was slightly changed, enough to strike us only a glancing blow on the port-bow, which left us uninjured, while the two vessels grated past each other. He tried to sink us with a broadside as he went by; but only one of his guns went off, the primers in all the others failing. That gun sent a shell that entered the berth-deck of the ‘Hartford,’ and killed five men.”

But by this time the unequal conflict was becoming too much even for a man of Buchanan’s courage. The armor of the ram was penetrated in several places, and at last came a shot that almost fatally wounded her commander. With the controlling mind that guided her course gone, the ram was useless; and in a moment a white flag fluttered from the shattered stump of her flagstaff. And so closed the naval battle that effectually ended Confederate rule on the Gulf coast, and earned for Farragut his proudest laurels.

BATTLE OF MOBILE BAY—UNION FLEET ENGAGING FORT MORGAN AND
CONFEDERATE VESSELS, AUGUST 5, 1864

CHAPTER XIX.

THE FALL OF FORT FISHER. — THE NAVY ENDS ITS WORK.

IN noticing the work of the blockading-fleet, we have spoken of the fine harbor of Wilmington, and the powerful works that defended its entrance. This Confederate stronghold was known as Fort Fisher, and had been for a long time a cause of anxiety and worry to the Northern authorities. The war had gone past Fort Fisher. To the north and to the south of it, the country was under the sway of the Federal authorities; but there in North Carolina stood the formidable bastions over which floated, in defiance of the laws of the Union, the stars and bars of the rapidly dying Confederacy. With its connected batteries, Fort Fisher mounted seventy-five guns, and was stronger than the celebrated Malakoff at Sebastopol.

To reduce this stronghold, a joint naval and military expedition was fitted out; and Gen. Butler was placed in command of the land forces, while Admiral Porter, torn from his beloved Western rivers, was given command of the fleet. Butler introduced a novel feature at the very opening of the siege. He procured an old steamer, and had her packed full of gunpowder. On a dark night this craft was towed close to the walls of the fort and set afire, in the hopes that she might, in blowing up, tear the works to pieces

But in this the projectors were disappointed; for the explosion, though a terrific one, did absolutely no harm to the Confederate works. When Porter finally did get into the fort, he asked a soldier what he thought of the attempt to blow them up. "It was a mighty mean trick," responded the Southerner satirically. "You woke us all up."

After this fiasco had set all the world laughing, Butler retired voluntarily, and was succeeded by Gen. Terry; and on Christmas Eve of the year 1864 the fleet began the bombardment, although the land forces were not yet prepared for the assault. It was the grandest armada that was ever arrayed against any fortress. The thunder of nearly five hundred guns rent the air on that Christmas Eve, when carols were being sung in Christian churches throughout the world. Tremendous as was the cannonade, the earthworks were almost a match for it. The fort was not a mass of masonry that these enormous guns might batter down and crumble into rubbish, but a huge bank of earth in which the shells might harmlessly bury themselves. But five hundred cannon are more than a match for any fort, and so they soon proved to be in this instance. Earthworks, guns, and men alike went down before them. The iron-clads were stationed about three-quarters of a mile from the fort, a little farther out were the frigates and heavy sloops, and still beyond were the smaller vessels, — all firing to cover themselves; and all along the whole extended line there blazed one almost continuous sheet of flame, while the rolling thunder of the broadsides, and the defiant answering roar from the guns of the forts, shook earth and sea. Clouds of dust went up from the bastions of the fort, and mingled with the floating smoke above. Within the forts, there was a scene of the most terrible confusion: guns were overturned, piles of cannon-balls were knocked to pieces and scattered about, and two magazines were blown up and scattered fragments all over the parade. In one hour and a quarter all the gunners were driven to the bomb-proofs, and the forts were silenced, not returning a single shot.

On Christmas morning Gen. Terry arrived with all his transports, and the attack was recommenced. Early in the morning the ships fell into position and began a slow fire, merely to cover the landing of the troops. Again the garrison was driven to the bomb-proofs; and, indeed, so entirely were they chased from their posts, that a Federal soldier went into the fort and brought off a Confederate flag without ever having been seen

by the garrison. All the troops were landed; but for some reason the attack was deferred, much to the disgust of the officers of the fleet, who felt sure that the fort could be taken then by a dash. But the troops returned to their transports or went into camp, and it was not until weeks after that the assault was fairly made. In the mean time, the ships rode out the winter gales at their anchors, doing a little desultory firing to keep the garrison in a state of unrest.

On the 14th of January the heavy bombardment began again, and again the troops were landed. By night it was seen that every gun on the face of the fort was disabled, and it was decided to storm the works the next day. Sixteen hundred sailors and four hundred marines were told off as the storming-party.

Early in the morning the ships began a fierce cannonade, under cover of which the sailors and marines landed, and threw up light breastworks to cover them until the time should be ripe for the charge. The arrangements contemplated a fierce charge by the blue-jackets, armed with their cutlasses and revolvers; while the marines, remaining in the rifle-pits, should cover the advancing party with a hot fire of musketry. The soldiers from the army-camp were to charge the fort on the other side.

At three o'clock came the signal that all was ready. The whistles of the ships rent the air; and the blue-jackets, with ringing cheers, dashed in a compact body up the beach. But in an instant the Confederate ramparts were black with men, and a furious fire of musketry rained down upon the sailors, who were helpless. The marines in the rifle-pits failed to do what was expected of them, and the sailors halted for a moment in surprise.

As they stood, a most destructive fire rained down upon them; and the poor fellows, grasping their useless cutlasses, turned and fled down the beach, leaving great heaps of dead and wounded behind. Then the Confederates, thinking the day was theirs, sprang on the ramparts, and began a vigorous cheer just as the Union soldiers came pouring over the landward face of the fort. Then ensued a fierce hand-to-hand fight that lasted for hours. The blue-jackets, encouraged, rushed back to the fight, and now at close quarters swung their cutlasses with deadly effect, until step by step the Confederates were driven out of the fort. Then the fleet opened upon them, and they fled for dear life while a sailor sprang to the flagstaff and pulled down the Confederate flag. Fort Fisher had fallen.

It was a noble victory, and formed a fitting climax to the work of the navy throughout that great war.

With the fall of Fort Fisher, the navy ceased to be a prominent factor in the war. Its work was done. Along the seacoast, and inland as far as navigable rivers extended, the ships of the North had carried the starry banner; and the sailor-boys of the North had defended it. And their opponents, whether on sea or shore, had shown themselves courageous and dashing, and worthy to be numbered as men of the same nation as those who proved the victors. And who can doubt, that, should the need arise, the sons of these men will show that they have in their veins the blood that animated the Blue-Jackets of '61?

PART IV
BLUE JACKETS IN TIMES OF PEACE

CHAPTER I.

POLICE SERVICE ON THE HIGH SEAS.—WAR SERVICE IN ASIATIC PORTS.—
LOSSES BY THE PERILS OF THE DEEP.—A BRUSH WITH THE PIRATES.
—ADMIRAL RODGERS AT COREA.—SERVICES IN ARCTIC WATERS.—THE
DISASTER AT SAMOA.—THE ATTACK ON THE “BALTIMORE’S” MEN AT
VALPARAISO.—LOSS OF THE “KEARSARGE.”—THE NAVAL REVIEW.

THE years immediately following the civil war were particularly quiet and uneventful for the navy. The department was chiefly engaged in the work of reducing the forces and adapting the navy to the changed conditions. At the termination of the war an immense naval armament had been developed, and the navy had assumed a magnitude which made the United States foremost among the naval powers. This force was gradually reduced to a peace standard. The volunteers were discharged and retired from service. The large number of captured and purchased vessels were disposed of. The home squadrons were withdrawn, and squadrons established abroad. The ships in foreign stations displayed an unprecedented energy and activity, visiting, in 1866, nearly every large port in the world, including several in China which had never before been entered by an American man-of-war. The reception of Rear-Admiral Bell in his flagship, the “Hartford,” by the Japanese, was manifestly more hospitable than that given to any other nation. Admiral Farragut was made commander of the European squadron

in 1867, and he was received with distinguished attention by the sovereigns and dignitaries of Europe. The "Swatara," of the European squadron, was ordered, in November, 1866, to Civita Vecchia, a port in Italy, to bring to the United States John H. Surratt, who was charged with being implicated in the assassination of Lincoln. The fugitive was apprehended, but he escaped, and fled into the papal dominions. He was recaptured at Alexandria, and in February was delivered to the marshal of the District of Columbia.

The Japanese made further advances of a friendly character toward the United States in 1867, when the "Shenandoah," of the Asiatic squadron, with the American minister aboard, arrived at the port of Hakodadi, and the first salute ever given in honor of a foreign minister was fired. Just previous to this, the Japanese government had expressed its willingness to open an additional port on the western coast to foreign trade, and Commodore Goldsborough, in command of the "Shenandoah," visited and made surveys of several harbors in which no foreign ship had ever before anchored.

News was received by Rear-Admiral Bell, in the autumn of 1866, that the schooner "General Sherman" had been wrecked in the Ping Yang River, one of the streams of Corea, and that her officers, crew, and passengers had been murdered by the natives. The Rear-Admiral despatched one of the vessels of his squadron, the "Wachusett," to investigate the matter, and demand from the authorities that the survivors, if any, be delivered on board the "Wachusett." The King of Corea was communicated with, but without satisfactory results. It was found that there were no survivors of the schooner. A few months afterward information reached Rear-Admiral Bell that a similar outrage had been perpetrated on the southeast end of the island of Formosa. It was reported that the American bark "Rover" had been wrecked, and all on board murdered. Commander Febiger, with the "Ashuelot," found that the crime had been committed by a horde of savages, who, the authorities of the island said, were not obedient to their laws. Rear-Admiral Bell left Shanghai in June, with the "Wyoming" and "Hartford," with the intention of destroying, if possible, the lurking-places of the savages. On the 18th of June the vessels anchored half a mile from shore, and 181 officers, sailors, and marines were landed, under the command of Commander Belknap, of the "Hartford," and Lieutenant-Commander Alexander S. Mackenzie. As the company approached the hills the natives,

dressed in cloths, with their bodies painted, and muskets glistening in the sun, descended to meet them, fighting from the long grass. After delivering their fire, they would retreat, and form ambuscades, into which the men from the ships frequently fell in charging after them. In one of these Lieutenant-Commander Mackenzie was mortally wounded. After fighting under the intensely hot sun for six hours, during which period several of the attacking party suffered sunstroke, they returned to their ships, the expedition having proved a failure.

The navy performed a valuable maritime service in 1867, by locating and surveying a shoal which was reported to exist twenty miles west of Georges Shoal, and directly in the track of vessels bound to and from Europe. The shoal was found by Commander Chandler with the United States steamer "Don," and mariners were made cognizant of a danger which probably had been fatal to many vessels. In the same year the "Sacramento," Captain Napoleon Collins, while on an important cruise, was wrecked on the reefs off the mouth of the Kothapalem River in the Bay of Bengal. The vessel proved a total wreck, but without loss of life. Those aboard effected thrilling escapes by means of rafts. The navy suffered another misfortune in 1868, in the drowning of Rear-Admiral Bell, commander of the Asiatic squadron, Lieutenant-Commander J. H. Reed, and ten of the crew of the Admiral's barge, which was upset in crossing the bar near Osaka, few days after the opening by the Japanese of that port and Hioto to foreigners. Another disaster occurred in 1869. Twenty-seven officers and men of the "Fredonia" were drowned at Arica, on the western coast of South America. The "Fredonia" and "Wateree" were resting at anchor when a shock of earthquake was felt. The sea receded and left the former vessel on the bottom; a moment afterward the wave rolled back, breaking the ship into fragments. The "Wateree" was thrown upon the shore; its position was such that the expense of launching would have been greater than the worth of the vessel, and it was consequently sold. A year previous to its catastrophe, the "Monongahela," in the harbor of St. Croix, was swept from her moorings by the force of an earthquake, and carried by a wave over the warehouses into one of the streets of the town. Five of her crew were lost. The vessel, after an interval of some months, was relaunched.

The Cuban rebellion, which began in 1868, occasioned activity on the

part of some of the cruisers to prevent violations of the neutrality law and to protect the interests of American citizens. A company of Cuban filibusters, encamped on Gardiner's Island, near the eastern end of Long Island, were captured by Lieutenant Breese, in command of the revenue cutter "Mahoning," and fifty marines. The prisoners, to the number of one hundred and twenty-five, were taken to New York. On the island of Cuba some outrages were perpetrated upon American citizens by the Spanish authorities. Rear-Admiral Hoff, in command of the North Atlantic squadron, was ordered to Santiago de Cuba for the better protection of American interests, and no further aggressions occurred.

Two disasters in the navy ushered in the year 1870. In the Bay of Yeddo, on January 24th, the steam-sloop "Oneida," just after leaving Yokohama for Hong Kong, was run into and sunk by the English steamer "Bombay," with the loss of twenty officers and ninety-six men. The tug "Marie" was sunk in the same month, with a loss of four men, in Long Island Sound. In October of the same year, Commander Sicard of the "Saginaw" determined to run to Ocean Island, a small island about a hundred miles west of the Midways, to rescue any sailors who might have been shipwrecked there. The "Saginaw" was herself wrecked on a reef off the perilous coast, but her men, after extreme exertions, landed safely on the shores of the uninhabited island. Here they lived for some months. They were rescued by a steamer from the Sandwich Islands, sent to their aid by the authorities of the islands, who had been informed of the accident by William Halford, one of the crew, who, with Lieutenant Talbot and three others, had volunteered to make the trip from Ocean Island to Honolulu, a distance of 1,500 miles, in an open boat. After thirty-one days of great danger and hardship, they arrived off one of the Hawaiian group of islands. In attempting to land, the boat was upset in the surf, and all but Halford were drowned.

At various times during the years 1871 and 1872, the marines of the Brooklyn Navy Yard rendered very efficient aid to the revenue officers in quelling riots in Brooklyn which grew out of the raiding of illicit distilleries. In July, 1871, Captain Gilbert was killed and several men wounded by the rioters.

The steamer "Forward," bearing the San Salvador flag, landed 200 desperadoes at Guaymas, Mexico, in June, 1870, and these outlaws took pos-

session of the custom-house. They forced the foreign merchants to furnish them with funds and goods, and compelled the United States' consul to supply coal for their vessel, their purpose being to become pirates on a large scale. Commander Low, of the "Mohican," upon learning these facts, sailed from Mazatlan, and overtook the "Forward" while still in the Gulf of California. She was attacked in the harbor of Boca Teacapan by six boat-loads of sailors and marines from the "Mohican," and was captured and burned.

It seemed desirable, in 1871, that some arrangement should be made with the people of Corea whereby sailors wrecked upon these shores should have protection. With this end in view our Minister to China, accompanied by Rear-Admiral John Rodgers, with the "Colorado," the "Alaska," the "Benicia," the "Monocacy," and the "Palos," vessels of the Asiatic squadron, sailed to Corea, anchoring in the Sale River. The local authorities were assured that the visit was a perfectly peaceful one, and they in turn gave evidences of a peaceful spirit. But when a party engaged in making surveys and soundings for the safety of commerce had got beyond a point where they could be protected by the cruisers' guns, they were fired upon the Coreans, and were forced to re-pass the Corean forts under a fierce cannonade. Admiral Rodgers and the minister determined that an explanation should be at once demanded. No answer having been received from the Coreans after an interval of ten days, it was decided that an attack should be made upon the forts from which the shots had been fired. A party of about 700 of the sailors and marines were landed, and after a march through mud which rose to their knees, the first fort was captured without serious resistance. The next day, other forts were easily taken, and preparations were made to attack the horseshoe-shaped citadel, which was defended by a garrison of a thousand Corean soldiers. A few shells from the vessels, judiciously planted among the Coreans, frightened and disconcerted them; but they made a stubborn fight until their ammunition gave out. The attacking party swarmed over the walls. Then ensued a desperate hand-to-hand fight. The Coreans expected no quarter, and fought till all who had not fled had been killed or wounded. Lieutenant Hugh McKee, who was the first man to climb over the ramparts, fell with a mortal wound. Two hundred and forty-seven dead Coreans were counted within the works. Five forts and a

large number of flags and cannon had been captured. The gallant conduct of the men of the navy made a deep impression on the people of the China coast and led to the increased consideration and safety of American citizens in those localities.

On Saturday morning, November 26, 1877, occurred one of the most disastrous wrecks in the history of the navy. The steam sloop-of-war "Huron" struck the rocks near Oregon Inlet, North Carolina, in a heavy gale and was wrecked, with the loss of nearly a hundred officers and men. The boats were washed from the davits and the thirty-four persons who were saved reached the shore by swimming. Ensign Lucien Young landed on the beach after desperate efforts, and spread the alarm. His sturdy activity resulted in the saving of several lives.

The members of a naval exploring expedition, which had sailed in the "Polaris" for the Arctic regions in 1871, were rescued from boats and the floating ice in Baffin's Bay in 1873, the "Polaris" having been abandoned as a wreck.

The United States steamer "Rodgers," commanded by Lieutenant Robert M. Berry, was detailed in 1881 to search for the exploring party organized by James Gordon Bennett and headed by Lieutenant-Commander DeLong, which had embarked in the "Jeannette" for the far north and had been last heard of in August, 1879. The "Rodgers" was burned and abandoned in St. Laurence Bay, Siberia, in November, 1881; but Lieutenant Berry continued his search on the coast. In the early spring he learned that one party from the "Jeannette," that of Chief-Engineer Melville, had been saved and was searching for the other two parties which had become separated from the first in a storm while attempting to escape from the Arctic seas in open boats after the "Jeannette" had been crushed and sunk by the ice. Lieutenant Berry soon afterward met Chief-Engineer Melville's party and learned that the bodies of Lieutenant DeLong and his companions had been found. Search for the other party which had been led by Lieutenant Chipp was continued, and the Navy Department fitted out another vessel, the "Alliance," to aid in the possible rescue. But Lieutenant Chipp and his men were never found.

During the massacres by Egyptian troops under Arabi Pasha in Alexandria, in 1882, when more than two hundred European residents were killed or

wounded, the flagship "Lancaster," under Captain Gherardi, was in the harbor and afforded a place of refuge for large numbers of men, women, and children. A large body of marines with a detachment of naval artillery landed in the city and were of much service in restoring order.

Another Arctic expedition was fitted out in the spring of 1883. Three vessels, the "Thetis," "Alert," and "Bear," left New York by order of the Navy Department to search for Lieutenant Greely and his party, comprising what is known as the Lady Franklin Bay Expedition. After a long voyage, in which the vessels were several times in imminent peril, they passed around Cape Sabine and found Lieutenant Greely and the seven survivors of his party. Their condition was so enfeebled that they could have lived only a little longer. On August 8th the relief squadron and the rescued party arrived in New York.

An insurrection broke out in the United States of Colombia in the spring of 1885, during which the city of Aspinwall was in great part destroyed. The affair assumed such a serious aspect that the vessels of the North Atlantic squadron, under Rear Admiral Jouett, were ordered to Aspinwall, and in addition to the fleet, the Navy Department sent a force consisting of about seven hundred and fifty from New York, for the special purpose of operating on shore. Upon his arrival at Aspinwall, on April 10th, Rear-Admiral Jouett issued orders for the landing of a force to open the transit across the isthmus, and on the 12th, trains were run as usual. On April 28th, the insurgents capitulated, and shortly afterward the United States naval force was withdrawn.

One of the most severe disasters that ever befell the United States Navy in time of peace occurred on the 16th of March, 1889, when, during a hurricane in the harbor of Apia, Samoa, the "Trenton" and "Vandalia" were totally wrecked, and the "Nipsic" was run on shore to save her from destruction. Five officers and forty-six men lost their lives in this catastrophe. Nothing that skill and experience could suggest was left undone to avert the disaster, but the vessels were equipped with old-fashioned engines, whose steam-power was not strong enough to withstand the fury of the gale. The value of high-pressure engines in war vessels was illustrated by the British ship "Calliope," which was able to steam out to sea, and thus escaped destruction on the reefs. The "Trenton" and the "Vandalia," which had been two of the best of the old wooden fleet, were abandoned. The "Nipsic"

sailed for the Sandwich Islands, where she was refitted for active service. The natives of Samoa displayed great heroism in their efforts to save the shipwrecked sailors, and were afterward rewarded by the United States government. Fifteen merchant vessels which were in the harbor were either sunk or run upon the shore, and the German naval vessels "Elber," "Adler," and "Olga" were wrecked, with the loss of many men.

When the United States cruiser "Baltimore" was at anchor in the harbor off Valparaiso in October, 1891, shortly after the end of a Chilian rebellion, a number of the seamen were given liberty to go on shore. They were attacked by a mob in the streets of Valparaiso, and Petty Officer Charles Riffin was stabbed, and left to die. Another petty officer, Johnson, went to his assistance, and was attempting to carry him to an apothecary, when a squad of Chilian police, with fixed bayonets, came down the street. When at close quarters, they fired at Johnson. A shot passed through his clothes, and another entered Riffin's neck, inflicting a death-wound. Petty Officer Hamilton was dragged to jail dangerously wounded. As a result of the attack, two men, Riffin and Turnbull, died, and eighteen others were disabled by wounds. Thirty-six of the "Baltimore's" men were arrested, and treated by the Chilian police with extreme brutality. Investigation proved that all had been perfectly sober and well-behaved. The attack grew out of the bitter hostility of the Chilians toward the United States—a feeling largely due to false accusations in reference to the action of the navy during the Chilian revolution. The affair caused excitement and indignation in the United States, but was amicably settled.

The most important assemblage of naval vessels ever seen in the waters of America took place in April, 1893, in celebration of the Columbian quadricentennial. Invitations had been sent to all the important maritime powers, and at the rendezvous in Hampton Roads, on April 24th, the combined fleet, under the direction of Rear-Admiral Gherardi, of the United States Navy, comprised twelve men-of-war of the United States, four of England, three of France, two of Italy, two of Germany, two of Russia, three of Brazil, and one of Holland. At New York, the squadron was joined by one more Russian, three Spanish, one Argentine vessel, and the "Miantonomoh," of the United States Navy, making a combined fleet of thirty-five ships-of-war. The President, on board the "Dolphin," reviewed the fleet

on April 27th, and the next day the armed battalions of the various nations, to the number of 3,815 men, marched through the streets of New York, and were reviewed by the Governor of the State.

The navy suffered a severe loss in 1894, in the wreck of the famous old man-of-war "Kearsarge," the conqueror of the "Alabama," which was wrecked February 2d on Roncador Reef, while on her way from Port au Prince to Bluefields, Nicaragua. Eight days later her men were rescued by the "City of Para."

One of the conspicuous features of the pageants which attended the opening of the Kiel Canal, between the North and the Baltic seas, on June 19th, 1895, was the fleet of war-vessels which assembled in the harbor at Kiel. It was the most remarkable ever seen in any waters, numbering over a hundred of the finest vessels in existence. A number of these, headed by the flagship "New York," belonged to the new navy of the United States. These ships provoked the admiration of all the naval authorities present, and their effective strength was noted and commented upon all over Europe.

CHAPTER II.

THE NAVAL MILITIA.—A VOLUNTEER SERVICE WHICH IN TIME OF WAR WILL BE EFFECTIVE.—HOW BOYS ARE TRAINED FOR THE LIFE OF A SAILOR.—CONDITIONS OF ENLISTMENT IN THE VOLUNTEER BRANCH OF THE SERVICE.—THE WORK OF THE SEAGOING MILITIA IN SUMMER.

THE *personnel* of a navy is quite as important as its vessels. It has been said that a ship is worth what her captain and crew are worth. It is certainly true that a man-of-war, of whatever power, would be useless or worse than useless if her officers and men did not understand her wonderfully complicated construction nor know how to handle her. The officers of the United States navy are given this important instruction at the Naval Academy at Annapolis, and the rank and file of the men of the navy, those who fill the positions of seamen and petty officers, are trained at the station in Coaster's Island Harbor, near Newport, R. I., and in the training-ships when cruising.

The training-station is designed to ensure the thorough efficiency of the corps of men enlisted in the service, and to provide for the manning of the vessels by American citizens instead of by foreigners.

There was a time, and not a great while ago, when the gunners and crews of United States men-of-war were, with very few exceptions, aliens, who spoke the English language with difficulty, and who did not have, and could not be expected to have, any of the patriotic spirit which makes effective fighters in naval engagements. While this condition still exists to

FORWARD TURRET OF MONITOR "TERROR"

some extent, the growth of the apprentice system is bringing about a gradual change.

As early as 1837 an attempt was made to establish a naval apprentice system. In that year Congress passed an act making it "lawful to enlist boys for the navy, not under thirteen nor over eighteen years of age, to serve until twenty-one." Within a few months several boys were received as apprentices aboard naval vessels. Six years later, however, the system was abandoned as a failure, owing to a false impression which had gained wide currency that the apprentices would receive commissions in the navy.

Capt. S. B. Luce and the officers of the practice-ship "Macedonian" investigated the apprentice systems at Portsmouth and Plymouth, England, twenty years afterward, and made such favorable reports that Secretary Welles was induced to revive it in the United States navy. This was done, and during the civil war the system was in successful operation, but soon after the close of the war it was again abandoned.

In the following years the want of intelligent seamen of American birth in the navy was greatly felt, and in 1875 Secretary of the Navy Robeson deemed it advisable to resume the enlistment of boys under the naval apprentice law, which was still in existence. As an experiment two hundred and fifty boys were enlisted and placed on the frigates "Minnesota" and "Constitution" and the sloops of war "Portsmouth" and "Saratoga," which were commissioned as training-ships. Since 1875 the training-station and vessels have been very important features of the naval establishment.

The regulations governing the enlistment of boys are simple and few in number. The boys must be between the ages of fourteen and sixteen years, of robust form, intelligent, of perfectly sound and healthy constitution, free from all physical defect or malformation, and of good moral character. They must be able to read and write, although in special cases, when a boy shows general intelligence and is otherwise qualified, he may be enlisted notwithstanding the fact that his reading and writing are imperfect. Each boy presenting himself for enlistment must be accompanied by his father, mother, or, in case neither is living, by his legally appointed guardian, and must voluntarily sign an agreement to serve in the navy till twenty-one years of age. Upon enlistment the boys are rated as third-class apprentices, and are paid \$9 a month. Deserving boys are rated second-class apprentices, and

receive pay of \$15 a month after they have completed their term of service on a cruising training-ship. If they have served a year on a cruising ship of war they are considered properly qualified apprentices, and receive \$21 a month. As the apprentices become proficient and their services are required, they are transferred to the seagoing vessels. Upon the expiration of the enlistment of an apprentice he will, if recommended, receive an honorable discharge, and if he enlists again within three months, will be given pay for this period. The apprentices are under the immediate supervision of the Bureau of Navigation of the Navy Department, and applications for enlistment are made to the chief of that bureau at Washington, or to the officer commanding either the "Vermont," at the Brooklyn navy yard, or the "Richmond," stationed at the League Island yard, Philadelphia. These were the recruiting-ships, from which the boys were being sent to the training-station at Coaster's Island as soon as a squad of twenty were enlisted, at the period of this writing. Sometimes there have been more ships in this duty.

There are usually about one hundred boys at the station at one time. They are taught to march, handle muskets, revolvers, broadswords, and cannon; they go aloft so as to get practice with the sails, and are also made familiar with the management of boats and oars and boathooks. Two hours a day are devoted to lessons, consisting of arithmetic, reading, writing, spelling, geography, and grammar. Ample time is given for recreation, and innocent social pleasures are encouraged.

There are two training-ships, besides the famous old ship "Constellation," which figured in the War of 1812, at the station devoted to the use of the boys, and every six months one of these appears at Coaster's Island, and receives the apprentices who have been at the station for half a year. The vessel then starts on a cruise to Europe if it is summer, and to the West Indies in the winter. Each boy remains aboard a year, only half of the crew being changed at a time. Practice aloft and the life in general aboard a sailing vessel give him a broad general foundation of knowledge of the sea and ships, upon which he can build the special training and instruction he afterward gets upon a regular man-of-war. When he is transferred, upon the expiration of his year on the training-ship, he begins the task of mastering the intricacies of a modern ship-of-war. Here he remains until his first

term of service has expired. If he re-enlists and has shown aptitude for the service, he is sent to Washington navy yard for a course of six months' instruction in gunnery and special branches, such as electricity and torpedoes. He becomes a seaman gunner, with the billet and pay of a petty officer.

A serious defect in the apprentice system, however, and one which makes it impossible to man the vessels altogether with well-trained American citizens, is the fact that the majority of the apprentices do not re-enlist after receiving their honorable discharge at the age of twenty-one, for the reason that the special training they have received enables them to secure better-paid places in civil life than are possible to them in the navy. In the government service, too, they cannot attain the rank of officers, as there is no such provision for the promotion of enlisted men in the navy as there is in the army.

Secretary Tracy, in his report of 1889, forcibly called the attention of Congress to this condition. As a remedy he recommended that there be a statutory extension of the term of enlistment to twenty-four years of age. It was further recommended that the number of apprentices be increased from seven hundred and fifty to fifteen hundred, and that the course in the training-ships be extended by the formation of a special class for training in gunnery on board a ship devoted exclusively to this purpose. Congress has as yet taken no action upon these and numerous other recommendations which have been made for the improvement of the apprentice system, and they remain pertinent.

The navy, however, in case of war, would not have to depend entirely upon apprentices and graduates of the training-station for its skilled seamen. The Naval Militia has become an organization that would render very efficient service if called upon by the government. It is composed of about three thousand highly intelligent and well-drilled young men, and has been organized in sixteen States. It bears the same relation to the navy that the National Guard does to the regular army, and is therefore wholly under State control; but it is subject to call, of course, by the federal government.

The organization of the Naval Militia has been a growth of the last eight years, and is due in large measure to the reconstruction of the navy and the revival of activity and interest in naval affairs in the United States.

It was seen that the new vessels of modern and intricate construction and

appliances should, in case of war, be manned by men skilled in the use of these appliances. The apprentice system brought to the navy a supply of apprentices, but the number would be totally inadequate in a naval war. A naval reserve force was an urgent necessity.

The first step toward meeting this necessity was made in 1887 by Senator Whitthorne, of Tennessee, who in that year introduced a bill "to create a naval reserve of auxiliary cruisers, officers, and men, from the mercantile marine of the United States." The measure did not pass, and the next year another was introduced by Senator Whitthorne, providing for the enrolment of a Naval Militia and the organization of naval reserve forces. According to this bill, it was to be lawful for States and Territories bordering on sea and lake coasts and navigable rivers to enroll and designate as the Naval Militia all seafaring men of whatever calling or occupation, and all men engaged in the navigation of the rivers, lakes, and other waters, or in the construction or management of ships and craft, together with ship-owners and their employees, yacht-owners, members of yacht clubs and other associations for aquatic sports, and all ex-officers and former enlisted men of the navy.

The bill contemplated a naval reserve artillery and a naval reserve torpedo corps. It did not become a law, but formed a basis for legislation in several of the States shortly afterward, although the original plan, as shown in the proposed measure, was modified to the extent of making the Naval Militia a State organization and forming it of volunteers irrespective of occupation.

Massachusetts was the pioneer among the States in the organization of the Naval Militia. In May, 1888, the legislature passed a bill authorizing the formation of "a naval battalion to be attached to the volunteer militia." This measure was prepared, with the assistance of others, by Lieutenant John C. Soley, a retired officer of the United States navy, and he was afterward energetic in putting it into successful operation.

The next State to provide for a Naval Militia was Pennsylvania, whose legislature made the necessary law in 1889. On the same day the legislature of Rhode Island "established a naval battalion to be attached to the Rhode Island militia." In New York, in 1889, a State Naval Militia of three battalions of naval reserve artillery and a naval reserve torpedo corps, to consist of not less than four companies to a battalion, was established.

The practical work of the Naval Militia began in 1890, when the Massachusetts battalion drilled on the receiving-ship "Wabash," and the New York battalion on the receiving-ship "Minnesota."

A very decided impetus was given to the movement in 1891 by the appropriation by Congress of \$25,000 for arms and equipments for the Naval Militia, leaving the disbursement of the money to the discretion of the Secretary of the Navy. Within the year California, North Carolina, Texas, and Maryland joined the States having battalions of Naval Militia, and at its close the force numbered 1,149 men. Progress was made also in 1891 in the method of drilling and instructing the members of some of the battalions. Those of New York, Massachusetts, and Rhode Island spent several days aboard the vessels of the Squadron of Evolution, under the command of Rear-Admiral J. C. Walker, and were given practice with the guns and boats, and participated in the ship's routine duties.

Further appropriations of \$25,000 each for the Naval Militia were made in 1892 and 1893. The legislatures of Vermont and South Carolina provided for battalions of the Naval Militia in 1892, and those which had been authorized, but not yet organized, in Maryland and Pennsylvania, were formed. During the summer of 1892 the members of the North Carolina Naval Militia were drilled on board the "Newark." The "Wabash," the "Chicago," and the "Atlanta" were used for drills by the Massachusetts battalions, and those of New York received their instruction on the "New Hampshire," the "Chicago," and the "Atlanta." The California Naval Militia drilled on board the "Charleston."

The Naval Militia was increased in 1893 by battalions formed in North Carolina, Michigan, Illinois, Georgia, and Connecticut, under laws of these various legislatures of that year, and the force numbered 2,376 officers and men. New Jersey and Virginia, in 1894, organized battalions of the Naval Militia, and in that year Congress passed an important act, empowering the Secretary of the Navy to lend temporarily to any State vessels "not suitable or required for the general service, together with such of her apparel, charts, books, and instruments of navigation as he may deem proper, said vessel to be used only by the regularly organized Naval Militia of the State for the purposes of drill and instruction." Even interior States, with no bodies of water other than rivers, have organized naval battalions. At Pittsburg the

organization owns a small armored gunboat, of the sort that was so useful on inland waters in the civil war. This vessel was presented to the militia by a wealthy manufacturer. Few commands, however, are so fortunate. Most take advantage of the law authorizing the loan of government ships. Under this law the following vessels were lent: the "Minnesota" to Massachusetts, the "Wyandotte" to Connecticut, the "New Hampshire" to New York, the "Portsmouth" and the "Ajax" to New Jersey, the "St. Louis" to Pennsylvania, the "Dale" to Maryland, and the "Nantucket" to North Caro-

TORPEDO BOAT "CUSHING."

lina. The other States have been compelled to get along without vessels, for the reason that there have been no others available.

During the summer of 1894 the Massachusetts brigade of the militia encamped for drill on Lovell's Island, Boston Harbor, and the monitor "Passaic" was lent to the State. There were also drills and target-practice on the "Miantonomoh" and the "Atlanta." The forces of Connecticut and Rhode Island received instruction on the "Miantonomoh" and the "Atlanta" respectively, and New York's battalion spent a week on board the "New York" and the "San Francisco" in Gardiner's Bay, Long Island. A part of the Pennsylvania force had target-practice at sea on board the "New York," and the North Carolina battalion received instruction on the "Montgomery."

The California division helped to man the "Olympia" for a week in 1895, taking the places of the crew; the Maryland contingent had a week's cruise on the "Dale," and the First Naval Battalion of New York carried out a scheme of reconnoissance and distant boat work along the northern shore of Long Island, encamping on Shelter Island. The party was accompanied by the torpedo boat "Cushing." Most of the other battalions had their quota of drill and instruction.

These details of the summer operations of the Naval Militia will convey an idea of the manner in which its members are being prepared for the emergencies of war. In addition to the summer work, there is drill in armories in the winter. This course of training, in conjunction with the intelligence and enthusiasm of the young men of the Naval Militia, who are of the best classes in this country, has made an organization which would doubtless be of very great value in time of war.

The uniform of the Naval Militia consists of a blue cap, blouse, and trousers of blue trimmed with white braid. The working suit is of white duck with white canvas hat.

CHAPTER III.

HOW THE NAVY HAS GROWN.—THE COST AND CHARACTER OF OUR NEW WHITE SHIPS OF WAR.—OUR PERIOD OF NAVAL WEAKNESS AND OUR ADVANCE TO A PLACE AMONG THE GREAT NAVAL POWERS.—THE NEW DEVICES OF NAVAL WARFARE.—THE TORPEDO, THE DYNAMITE GUN, AND THE MODERN RIFLE.—ARMOR AND ITS POSSIBILITIES.

AT the close of the civil war the United States had one of the most formidable navies afloat. The necessities of the war had forced the Navy Department to the utmost exertion in increasing the number and power of the vessels of the fleets. This work of naval upbuilding and strengthening had been carried on, moreover, till Fort Fisher fell and hostile operations ceased. The result was that at the close of the war the United States had upon its hands a large number of ships-of-war for which it had no use. The Secretary of the Navy at once began to reduce the number, and secretaries succeeding him followed the same policy. Old vessels which had outlived their usefulness as cruisers were one by one taken out of commission and were not replaced. Thus the navy moved steadily on a downward plane. Through the seventies and into the eighties this retrogression continued. The lowest ebb was reached in 1882, when the entire naval force numbered only thirty-one vessels in commission, all but four of which were built entirely of wood. They were old-fashioned

ships, which had been efficient in a past day, but were totally unfit to cope with the modern war-ships of foreign naval powers. Both their guns and engines were inferior. Their sole usefulness, in short, lay in displaying the national flag upon the seas and in the harbors of the commercial world in times of peace.

This condition of the navy was referred to by Secretary Chandler, in his report of 1882, as follows:

"It is not the policy of the United States to maintain a large navy, but its reputation, honor, and prosperity require that such naval vessels as it possesses shall be the best which human ingenuity can devise and modern artificers construct. Our present vessels are not such and cannot be made such. They should be gradually replaced by iron or steel cruisers, and allowed to go out of commission."

It may be of interest to add that in 1882 there was only one high-power cannon in the navy, while there were nearly nineteen hundred naval officers, making the proportion of fifty-nine officers for each ship, and one for every five seamen.

As the result of Secretary Chandler's recommendations in his report of 1882, three steel war-ships and an armed despatch-steamer were authorized by the next Congress. The building of these vessels, named the "Chicago," the "Boston," the "Atlanta," and the "Dolphin," may be regarded as the first movement toward the making of the new navy of the United States.

While progress in naval construction has been so rapid that these ships are a long distance behind the war-vessels of to-day in power, they were then considered to be equal to any afloat in their respective classes. All are unarmored. The "Chicago," of forty-five hundred tons displacement and a speed of fourteen knots an hour, was an example of the largest and best unarmored fighting and cruising vessel then built, and, according to Secretary Chandler, had no superior in speed, endurance, and armament. In the "Boston" and "Atlanta," each of three thousand tons displacement and a speed of thirteen knots an hour, speed and endurance were supposed to have been given their greatest development, and their fighting power was increased by placing the battery on a central superstructure on the spar-deck and adopting a brig rig, so that the extremities would be clear for a fore and aft fire. The "Dolphin," of fifteen hundred tons displacement and a speed

of fifteen knots, was designed as an auxiliary in naval operations, and it was expected that she would furnish a model for high-speed commerce-destroyers to be subsequently built. These vessels were constructed at an aggregate cost of over \$2,400,000, in the ship-yard of John Roach, of Chester, Pa. The "Dolphin" was launched in 1884.

The Congress which authorized the building of the cruisers also directed that the double-turreted monitors, "Puritan," "Amphitrite," "Terror," and "Monadnock," whose keels had been laid several years before, be completed. In accordance with this order they were launched in 1883.

In order that the work of the reconstruction of the navy should be carried on as rapidly as possible, the secretary recommended, in 1883 and 1884, that seven unarmored cruisers, in addition to the four then in the process of construction, be built. Congress adopted his suggestion to the extent of authorizing, in 1884, the construction of two unarmored cruisers, two gunboats, and two armored cruisers.

The vessels with which the reconstruction of the navy began—namely the "Chicago," the "Boston," the "Atlanta," and the "Dolphin"—were completed about this time, and were in some measure disappointments. It was found that the "Dolphin" was better adapted for pleasure trips than for war service, because of the lack of protection against hostile fire. The engines had been so placed as to be exposed above water-line, which was condemned as a serious mistake in a war-vessel without armor-protection. It was realized, too, that the essential characteristic in an unarmored cruiser is great speed. The function she is expected to perform is to destroy commerce; and if she is slower than the merchant-vessels it is useless for her to go to sea; and if she is slower than the ironclads, and consequently cannot escape from them, she could not long continue her service. The chief objection to the vessels was the lack of a speed equal to that of merchantmen and the cruisers of other countries. The type of protected cruiser with a maximum speed, in some cases as high as twenty knots, developed at this time as a result of the earlier experiments. The torpedo, too, was receiving constant attention, and money was freely spent for its improvement. It was found that vessels at anchor or under slow headway could be protected from torpedoes by being surrounded by a large net. This defence was generally adopted for armored vessels.

A stride forward in naval construction in the United States marked the year 1887. Before that time a serious obstacle in the way of building up the navy was the lack in the country of manufactories necessary to the construction and armament of a modern war-vessel, namely, that of steel forgings for the heavier guns, of armor for ironclad vessels, and of secondary batteries, which are an essential portion of the armament. It was important that the country should not be dependent upon foreigners for these necessary implements of warfare, because they are contraband in time of war, and consequently could not then be obtained abroad. Secretary of the Navy Whitney, who succeeded Secretary Chandler, stipulated, in his advertisements for bids for the contracts of making the armor for the ships under construction, that this armor should be of domestic manufacture. Correspondence was also opened with the leading steel manufacturers of the country, offering them inducements to take the matter up. Interest was awakened, and it was found upon investigation that armor could be made in the United States as advantageously as abroad. A contract was drawn up with the Bethlehem Iron Company, under which a plant for the production of armor and gun steel was erected at Bethlehem, Pa., which was designed to be second to none in the world. In the matter of the second batteries, the policy of insisting upon home manufacture was also pursued, with the desired result.

Congress had authorized, in 1885, the construction of two additional cruisers and two gunboats. In 1886 there was further authorization of two armor-clad vessels, each of about six thousand tons, and each to cost, exclusive of armament, not more than \$2,500,000. In 1887 the sum of \$2,000,000 was appropriated for harbor and coast defence vessels. As a result of this reawakening on the part of Congress to the necessity of a respectable navy, and the manifestations of enlightenment in the form of substantial appropriations, Secretary Whitney was able to state in his report of 1888 that upon the completion of the ships under construction, the United States would rank second among the nations in the possession of unarmored cruisers or commerce-destroyers possessing the highest characteristics—namely, size of three thousand tons and upward and a speed of nineteen knots, and more. The vessels, inclusive of the monitors, completed and uncompleted, then composing the navy, were as follows: The "Dolphin," "Boston,"

"Atlanta," "Chicago," whose keels were laid in 1883; the "Charleston," "Baltimore," "Newark," "Philadelphia," "San Francisco," protected cruisers, whose keels were laid in 1887 and 1888; and the gunboats "Yorktown," "Petrel," "Concord," "Bennington," whose keels were laid in 1887 and 1888. In addition to these, there were under construction the dynamite cruiser "Vesuvius," with a guaranteed speed of twenty knots an hour, and a first-class torpedo-boat with a speed of twenty-three knots an hour.

DYNAMITE CRUISER "VESUVIUS."

Besides these, five protected cruisers had been authorized, but were not yet in process of construction.

The "Baltimore," "Charlestown," "Yorktown," and "Petrel" were given their trial trips in 1889, and were accepted by the Navy Department. The trip of the "Baltimore," in particular, was a brilliant success. The horse-power proved to be in excess of the contract requirement, and her highest speed for one hour was 20.39 knots—this result being then unparalleled by any war-ship in the world of the "Baltimore's" displacement.

When Benjamin F. Tracy became Secretary of the Navy, in 1889, he called attention to the fact that, while the United States had secured a num-

ber of excellent vessels of the cruiser type, it did not as yet possess an efficient navy. He pointed out that the country had two widely separated ocean frontiers to protect, and that there was only one way to protect them, namely, by two separate fleets of armored battle-ships. He said further that in addition to the battle-ships, the condition of the country required at least twenty vessels for coast and harbor defence, and, moreover, that the employment of these ships as floating fortresses demanded that they be equipped with the most powerful batteries and the heaviest of armor. It may be said parenthetically that eight vessels of this type, five of which were reconstructed monitors, were under construction or had been authorized at that time. Secretary Tracy recommended the authorization by the following Congress of eight armored battle-ships. He also said that the United States could not afford to neglect torpedo-boats, with which the foreign naval powers were well supplied, and he recommended that appropriations be made for the construction of at least five of these boats of the first and second class. The year before, the keel of the first of the battle-ships, the "Texas," had been laid in the navy-yard at Norfolk, Va., and in 1889 work was begun at the Brooklyn navy yard upon another vessel of the same class, the "Maine." These vessels are respectively of 6,314 and 6,648 tons displacement. The construction of a third battle-ship, which had been provided for, had not yet been begun.

Secretary Tracy's recommendations reveal clearly the naval condition in 1889. Previous to that year the additions to the navy had consisted chiefly of cruisers of from three to four thousand tons, and of gunboats under two thousand tons; but, acting upon the secretary's report, Congress, on June 10, 1890, authorized, in addition to another armored cruiser, three seagoing coast-line battle-ships. These were an entirely new class of vessels in the United States navy, and their authorization marks another distinct step in its reconstruction.

An appropriation was made in 1891 for an additional armored cruiser, designed to be a sister ship to the one provided for in 1890. It was the purpose to make these vessels more powerful than any of their type in the navy. Their tonnage was fixed at 7,500, and their maximum speed at twenty-two knots. They were to be given coal capacity that would enable them to cruise for great distances without recoaling. This, it will be seen,

is an important advantage to a navy so destitute of coaling-stations abroad as that of the United States.

The vessels under construction in 1891 were the monitors "Puritan," "Amphitrite," "Monadnock," and "Terror," which had been begun in 1874,¹ but had been neglected in subsequent years; the "Maine," the "Texas," the coast-defence vessel "Monterey," which was launched in 1891; the "New York," "Cincinnati," "Raleigh," "Detroit," and a practice-ship, which had been authorized by the act of 1887; the harbor-defence ram "Katahdin;" and gunboats "5" and "6," authorized in 1889; the three battle-ships, "Indiana," "Massachusetts," and "Oregon," and the protected cruiser "No. 12," authorized by the act of 1890; and protected cruiser "No. 13," provided for in 1891.

Three vessels, the "Newark," the "Concord," and the "Bennington," were given their trial trips in 1890. The behavior of the "Newark" proved her to be a valuable addition to the list of cruisers. The "Concord" and the "Bennington," vessels of the gunboat class, similar to the "Yorktown," also gave evidences of power and usefulness. They carry a comparatively heavy battery, while their light draught enables them to run into shallow rivers and bays, and thus perform services for which larger vessels are incapacitated.

The subject of the organization of a naval militia or reserve had been discussed for some time before Secretary Tracy assumed his office. He forcibly urged the necessity of such an organization in his first and in following annual reports, until, in 1891, Congress appropriated \$25,000 for arms for the militia. This was a decided impetus toward its development, and at the close of the year it existed in six States, an effective, well-drilled, and organized force of eleven hundred men.

The year 1892 saw considerable progress in the development of the navy. Two important vessels, the "Iowa," a first-class, seagoing battle-ship of 11,296 tons displacement, and the "Brooklyn," an armored cruiser of 9,150 tons displacement, were provided for by Congress. The cruisers "Texas," "Columbia," "Olympia," "Raleigh," and "Cincinnati," and the gunboats "Machias" and "Castine" were launched.

Secretary Tracy's administration of the affairs of the navy, which closed in 1892, was one of marked progress and development; and this develop-

ment was not confined to ships alone. Experiments extending over a period of three years had resulted in the adopting of an armor of new composition, namely, nickel-steel, which had been found to be far superior to any before known. The manufacture of torpedoes had been domesticated. Since 1889 the heavy, rapid-firing guns had been developed and proved successful. The manufacture of armor-piercing shells, of which two firms in Europe had had the monopoly, was begun in this period under the care and encouragement of the Navy Department; and the shells turned out soon surpassed the foreign product. Through investigation and experiment conducted by its own agencies, the Navy Department succeeded in developing a smokeless powder, which gave better results than that made abroad. Careful and protracted experiments with high explosives were also carried on, with the result of developing an explosive that can be safely used in shells fired from high-power guns.

In 1893, the first year of the administration of Secretary Herbert, the following vessels were launched: the armored battle-ships "Indiana" and "Massachusetts;" the protected cruiser "Minneapolis;" the unarmored and very rapid cruiser "Marblehead;" and the armed coast-defence ram "Katahdin." During the same year Congress authorized the construction of three new vessels, to be of the class known as light-draft protected gunboats. These are of about twelve hundred tons displacement, and are designed for river service in China and elsewhere. Several vessels, namely, the "Monterey," "Bancroft," "Detroit," "New York," armored cruiser of 8,480 tons displacement, and the gunboat "Machias," were given their trial trips in 1893. The results were in each case satisfactory, and the vessels were added to the effective fleet of the navy.

Before 1893 the United States had been behind the other important nations in the matter of small-arms equipment. The navy was still using the old-fashioned, large-calibre rifle, employing a charge of black powder, and effectively carrying only twelve hundred yards. Under Secretary Herbert's direction, a board of naval officers investigated the improved small arms in use in foreign navies, and made recommendations which resulted in the adoption of a small-calibre magazine rifle, in which is used smokeless powder, and which has an effective range of a mile and a half. A further advantage of the new rifle is that it employs cartridges of such a weight that no less than

two hundred rounds can be carried by one man. The cartridges used in the old rifle were so heavy that one man could not carry more than fifty rounds.

Secretary Herbert recommended in his report of 1893 that Congress authorize the construction of at least one new battle-ship and six torpedo-boats. He said that for the defence of ports the latter are more effective according to cost than any class of vessels. The knowledge of their existence alone will make an enemy chary about approaching within bombarding distance. The value of this boat is recognized by all naval powers, and they are being built abroad in great numbers. The next naval appropriation contained a provision authorizing the construction of three additional torpedo-boats of the general type of the "Ericsson," which was then ready for trial. The design for the new boat called for a speed of not less than twenty-four and one-half knots an hour. The battle-ships "Indiana," "Texas," and "Oregon" underwent preliminary trial trips in 1894, and were accepted by the government in 1895. It is of interest to note that until these vessels were put in commission, the navy was still in the condition that existed when President Cleveland, in his first message to Congress in 1885, made the following statement: "We have not a single vessel that could keep the seas against a first-class vessel of any important power." It is true that vessels of size and power enough to hold their own against the battle-ships of other nations had been under construction for several years, but the United States was still without an available man-of-war of the first class until the "Indiana" and the "Oregon" joined the fleet.

Considerable progress in naval affairs marked the year 1895. One of the important events was the adding to the commissioned fleet of the coast-defence monitor "Amphitrite," whose keel was laid in 1874. The work of remodelling her was begun in 1889, under the appropriation made by Congress in 1887. The "Amphitrite" is in some respects an old-fashioned type of vessel, but is nevertheless capable of important service. Her displacement is 3,990 tons. Her armor and armament are heavy, although not so powerful as that of the battle-ships. Her main advantage, as with all of the monitors, is that she presents a comparatively small target for the enemy's fire.

Adopting the spirit of Secretary Herbert's recommendations in his report of 1894, Congress, in 1895, authorized the construction of two coast-

ENSIGN WORTH BAGLEY, OF THE TORPEDO-BOAT "WINSLOW," KILLED MAY 11, 1898

line battle-ships of most formidable equipment and power, their cost not to exceed \$4,000,000 each. Further provision was made for the building of twelve torpedo-boats. An interesting feature of the bill was the stipulation that one of the battle-ships shall bear the historic name "Kearsarge," after the famous old man-of-war that was wrecked in 1894 on Roncador Reef. According to the plans of the new ships, they resemble in a general way the "Indiana," although they are longer and broader and have a greater displacement, and their batteries are more powerful. A new feature in the arrangement of the guns was decided upon. The vessels will carry two turrets of two stories each. Many objections to this plan were advanced, but it was said that all are outweighed by the opportunity which the turrets give of concentrating an enormous quantity of shot on a given point. An estimate has been made that the "Kearsarge" will carry enough ammunition to kill or disable a million persons, and that she will be able to discharge it all within a period of five hours. Accommodations will be provided for five hundred and twenty officers and men. The "Kearsarge" and her sister ship, which will be called the "Kentucky," will carry heavier armor and guns and a greater quantity of the latter than any foreign battle-ship in existence or in course of construction.

The ram "Katahdin" was rejected by the government in 1895, because, upon her official trials, she did not fulfil the speed requirements. She made 16.011 knots, while the contract called for 17 knots. Congress was asked to purchase the vessel, and finally did so.

The armored cruiser "Brooklyn," designed to be one of the fastest and most powerful vessels of her class afloat, was launched from Cramp's shipyard in Philadelphia in 1895. She is the sister ship to the "New York," which was put in commission in 1893. A matter of significance, as showing the rapid progress in the art of naval construction within a few years, was the taking out of commission in 1895 of the "Chicago," to be refitted with engines and boilers that will give her powers approaching those of the newer vessels. Two years will be required for this work, and when she is complete she will travel three knots an hour faster than heretofore, and in many respects will be substantially a new ship.

The official trial trip of the battle-ship "Massachusetts," which occurred in 1896, was a source of gratification to the Navy Department and to all

others who are anxious to see the United States take respectable rank among the naval powers. The primary business of a battle-ship is to fight; hence her guns and not her speed are of the first importance. Naval experts have agreed that the "Massachusetts" and her sister ships, the "Indiana" and the "Oregon," have larger and more effective batteries than any man-of-war afloat or in progress of construction. The "Massachusetts" has now proved, by steaming at the rate of 16.15 knots for four hours, with a maximum speed of 17.03 knots, that she is superior to all other battle-ships in speed as well as in armament. Her performance is unparalleled in naval history, and makes her the foremost war-vessel of the world. The "Indiana" is a trifle slower. She steamed 15.61 knots for four hours, but under the disadvantage of a bottom that had never been cleaned. She would probably go half a knot faster with a clean bottom. As a representative specimen of the battle-ships which belong to the navy, a few details of the "Massachusetts'" armament may be of interest. She has thirty guns in all. The chief of these are four of thirteen-inch calibre, which are the largest in use in modern navies; a pair of them can be fired every three minutes. The eight-inch guns are next in size. There are four of them, and they can be fired every minute. In addition to these, there are two six-inch rifles, twenty six-pounders, and four one-pounders. The six-inch guns can be fired twice a minute, and the six-pounders twenty times in the same period. In a fight lasting thirty minutes, these guns would throw forty-one and a half tons of metal, of which forty-four thousand pounds would be the share of the thirteen-inch guns, thirty thousand pounds the share of the eight-inch, six thousand pounds of the six-inch, and thirty-six hundred pounds of the others. The total weight of the "Massachusetts'" broadside is 5,724 pounds, and of her head or astern fire 3,434 pounds.

Another of the monitors, the "Monadnock," was added to the navy in 1896. She was launched in 1883, and was then practically left alone until the acts of 1885, 1886, and 1887 provided for her completion. She is now a formidable vessel, with heavy guns which can be made to bear on a point a small boat's length from the ship's side, or can bombard at a distance of six miles.

While the successive Secretaries of the Navy, during the last fourteen years, have been chiefly active in increasing the number of ships-of-war,

they have not altogether neglected defences on the coast. Some of the larger sea-coast cities have succeeded in obtaining a part of the heavy gun and mortar batteries that would be necessary in repelling attacks without the aid of battle-ships. The cities of New York and San Francisco have now mounted and ready for action powerful pneumatic dynamite gun batteries, the most destructive engines of war in existence. Each of these guns is capable of hurling a projectile carrying five hundred pounds of the most powerful explosive known to man, and is able to destroy the strongest iron-clad. In the naval battle of Sinope in the Crimean War, a shell designed to explode on striking the object was used for the first time. When the high explosives, such as dynamite and gun-cotton, appeared, the idea suggested itself that they might be used in the shells with vastly greater effect than gunpowder, which had been employed. The objection, however, was that these explosives are so sensitive that there was great danger of their exploding at the outset of the journey from the sudden shock of being hurled from the ordinary high-power guns and mortars. Captain Zalinski, of the United States Artillery, suggested a method of gun construction by which the shells could be projected by a steady pressure of compressed air instead of by the sudden force of powder gases. This system has been steadily improved until the pneumatic dynamite gun now works perfectly and is a marvel of destructiveness. The United States possesses six and Great Britain one of the seven dynamite guns that have thus far been manufactured for coast defence.

The "Iowa," a battle-ship of the first class, whose keel was laid in 1893, was launched in March, 1895. She is the largest vessel of the navy now afloat, her displacement being 11,410 tons, which is over a thousand tons greater than that of the "Massachusetts," "Indiana," or "Oregon."

It will be seen that progress toward the building of the new navy of the United States has been steady since the first move was made in 1882. As a result of this development, the navy now consists, counting the vessels built and authorized by Congress, prior to 1896, the naval appropriations bill for that year still pending at this writing, of about seventy modern ships-of-war. These include eight battle-ships, six coast-defence steelclads, two armored cruisers, one armored ram, thirteen protected cruisers, eighteen gun-boats and unprotected cruisers, and about two dozen torpedo-boats. This

fleet gives the United States sixth place in the list of naval powers, being outranked in number of vessels by England, France, Russia, Germany, or Italy, in the order named. A true idea of the comparative fighting strength of the United States navy is not conveyed, however, by its rank in the numerical strength of the fleet. The *personnel* of the navy and the power of the individual ships must be considered. It is generally conceded that the United States has the finest fighting men and vessels in the world. These advantages would, in all probability, enable us to whip Germany or Italy in a series of naval contests; therefore, it is thought by naval critics that we really hold fourth position among the naval powers. England is still a long way ahead of us, the English navy now numbering nearly five hundred vessels, of which one hundred and twenty are armored cruisers. But, comparing the navies ship to ship, the United States fleet, so far as it goes, is superior even to that of Great Britain. The battle-ships, while somewhat smaller, are more effective fighters. The English navy has no armored cruisers as fast or as powerful as the "New York" and "Brooklyn;" and the commerce-destroyers, "Columbia" and "Minneapolis," are the fastest vessels, either of war or peace, that have gone to sea.

That this new navy of ours will ever have to meet so stern an ordeal as that through which the sailors of '61 went is wholly improbable. In multiplying the number and the effectiveness of fighting machines the nations of the world have seemingly lessened the likelihood of war. International disputes which once would have put the territory of all Europe ablaze are now settled by the peaceful devices of diplomacy. But behind the diplomat must be the gun, and it will be a sorry day for the United States when, if ever, the sense of security bred of an avowed national policy of non-intervention in foreign affairs shall lead this people to neglect the naval arm of the republic.

PART V.
THE NAVAL WAR WITH SPAIN.

CHAPTER I.

THE STATE OF CUBA.—PERTINACITY OF THE REVOLUTIONISTS.—SPAIN'S SACRIFICES AND FAILURE.—SPANISH BARBARITIES.—THE POLICY OF RECONCENTRATION.—AMERICAN SYMPATHY AROUSED.—THE STRUGGLE IN CONGRESS.—THE ASSASSINATION OF THE "MAINE."—REPORT OF THE COMMISSION.—THE ONWARD MARCH TO BATTLE.

SHORT time after the inauguration of William McKinley as President of the United States in March, 1897, it became apparent that the disordered condition of Cuba under Spanish rule was destined inevitably to become an issue which the United States must help to settle. For two years a great part of the island had been in open and determined revolt against Spanish rule. Though the forces of the King had been able to hold the seaports, thus cutting off the insurgents from regular communication with the outer world and making impotent their efforts to secure recognition from foreign powers, the patriots under Maceo and Gomez held control of the interior, established a government of their own, enforced order, and levied taxes. Enormous sacrifices were made by the Spanish people to re-establish sovereignty in the island. More than 300,000 troops were sent thither to be cruelly cut down by plague and pestilence. A nation, long on the verge of bankruptcy, incurred uncomplainingly prodigious additional indebtedness to save for its boy king—Alphonso XIII. was at this time but twelve years

old—its most precious possession in the west, the Pearl of the Antilles. Queen Isabella of Spain pawned her jewels that Columbus might have the means to press his voyage of discovery into unknown seas, but in the closing years of this century the people of Spain pawned their national assets, put even themselves and their posterity in pawn to hold for Spain the last relics of the empire which Columbus won for her.

Though we were forced to draw the sword upon Spain in the cause of humanity and human liberty, the man of reason, and of a sense of justice, will not withhold from the people of that sorely chastened nation admiration for their loyalty and the sacrifices they made in their national cause.

But the Spanish people were cruelly betrayed by their own rulers. The generals whom they sent to Cuba gave less thought to the suppression of the insurrection than to filling their own pockets. Out of the millions and millions of pesetas set aside by an already impoverished people for the needs of war, a great part was stolen by generals and by army contractors. The young conscripts, sent from Spain to a land where the air is pestilential to the unacclimated, were clothed and shod in shoddy; their food invited disease, and when they fell ill it was found that the greed of the generals had consumed the funds that should have provided sufficient hospital service. Comparatively few fell before the bullets or machetes of the insurgents—for, as we shall see, the revolutionists adopted the tactics of Fabius—but by thousands they succumbed to fevers of every kind. Death without glory was the hapless lot of the Spanish conscript.

The Patriot generals, Maximo Gomez and Antonio Maceo, met this situation with consummate skill. The military problem which confronted them was one which chiefly demanded self-restraint. They were lamentably destitute of arms and munitions of war. Cartridges were a dearly prized acquisition, and it is worth noting, as an indication of the venality which corrupted the Spanish army, that a considerable share of the insurgent ammunition was obtained by direct traffic with the Spanish soldiers. But in the main the Patriots were armed with heterogeneous firearms and the machete—a heavy, sword-like knife, used, in peace, for cutting cane. The latter at close quarters was a formidable weapon, and the insurgents became singularly proficient in its use; developing a style of machete play almost as exact and scientific as the school of the rapier in ancient France.

This disparity in weapons, however, made it imperative that the insur-

gents should avoid pitched battles with the invaders, who were armed with Mauser rifles, that do deadly work at two miles' distance. Accordingly, Gomez and Maceo confined themselves to harrying the Spanish army of occupation on every side and destroying all vestiges of Spanish authority outside the large towns. Warfare of this sort inevitably develops into the most cruel, the most barbarous of conflicts. So it was in this case. That Cuba might be made desolate, unable to pay anything toward the price of its own subjection, the insurgents relentlessly destroyed standing crops, burned great fields of standing sugar cane, destroyed mills, dynamited railroads, tore up roads, and demolished aqueducts. That the peaceful inhabitants—the pacificos—might not give aid or comfort to the revolutionists, General Weyler caused them to be driven from their farms and herded in the towns still under Spanish rule. There they stayed, in squalid huts or under thatched sheds, AND STARVED. Systematically, with devilish ingenuity, Spain planned to crush Cuba, not by fighting the revolutionists, but by starving women and children, old men and peaceful farm hands. It is estimated, and conservatively, that more than 500,000 people had been starved to death before the United States interfered.

Indeed, it was upon the hapless pacificos that the horrors of war chiefly descended. They were ruined, but that was the least. Their property, the honor of their women, and their lives were held to be the legitimate spoil of any Spanish soldier, and the tacit legalization of loot, rapine, and murder was taken full advantage of. More inhuman even than the regular soldiery were the guerrillas, licensed free companions, who roamed the island ever in search of spoil. The deeds of these wretches beggar description, and so foul was the repute of their corps that prisoners from their number taken by the Cubans were instantly put to death. It is just to say here that the testimony of Americans who served with Gomez and Maceo proves that those leaders enforced humane and orderly conduct upon their followers. The death penalty was more than once imposed upon useful and brave soldiers, who had been guilty of outrage. Nothing could more vividly indicate the moral difference between the Cuban and the Spaniards than the contrast between their methods of prosecuting the war. Though outlawed, the Revolutionists observed with scrupulous exactness the rule of civilized warfare, while the Spaniards murdered helpless prisoners, even killing the wounded in their beds, had recourse to torture and to nameless

mutilation, in order to wreak their hatred, and let loose a swarm of bandits and ruffians to prey upon the defenseless people of the island.

Out of warfare such as this, waged on an island only a few hours' sail from our coast, and in which were heavy American interests, it was inevitable that invasion of American rights should proceed, and the wrath of the American people be awakened. Our citizens owned large plantations in Cuba, which were destroyed either by the Spaniards or the insurgents. Many Americans living in the island or visiting there, were arrested by the Spanish authorities, and one, at least, Dr. Ruiz, was murdered in Morro Castle, while another, a newspaper correspondent, was cut to pieces by guerrillas. For Spanish outrages upon the lives or property of American citizens, claims aggregating \$60,000,000 were on file with the United States Department of State before the declaration of war. The general sympathy of the American people with the insurgents, as well as the hope of profit, led to repeated efforts by our citizens to smuggle arms and munitions of war to the Cubans, and in time it became necessary to employ a great part of the United States navy in police duty on the high seas for the purpose of stopping the filibusters. This service in behalf of Spain was exceedingly repugnant to the American mind, and contributed greatly to the growing feeling of irritation toward Spain.

History in coming ages, however, will relate, to the unending honor and glory of the American people, that humanitarian considerations, rather than regard for imperiled interests, brought the United States into a war which most emphatically their people did not desire. The great New York newspapers, day by day, printed circumstantial accounts of the frightful sufferings in Cuba. One journal secured a great number of photographs of scenes amid the starving reconcentrados, which, greatly enlarged, were publicly exhibited in all parts of the Union. These pictures, showing the frightful distortions of the human body as the result of long starvation, showing little children, mere skeletons, looking mutely down on the dead bodies of their parents, brought home to the mind of the people the state of life in a neighboring land as no writing, however brilliant, could. A cry went up from every part of the United States that a Christian duty was imposed upon our nation to interfere for the alleviation of such horrible suffering. Charity came to the rescue with free contributions of provisions, and Congress made a heavy appropriation of money for the relief of the

Cubans. But everywhere the opinion grew that philanthropy alone could not right this great wrong, but that the strong hand of the United States must reach forth to pluck out the Spaniard from the land he ravaged. And when a number of Senators and Representatives in Congress made journeys to Cuba, and returning, described in formal addresses at the Capitol the scenes of starvation and misery, this opinion hardened into positive conviction.

Then, almost as if planned by some all-knowing power, came a great and inexplicable disaster, which made American intervention inevitable and immediate.

During the latter years of the Cleveland administration the representatives of American interests in Cuba urged that a United States ship-of-war should be permanently stationed in Havana harbor. The request was reasonable, the act in thorough accord with the custom of nations. But, fearing to offend Spain, President Cleveland avoided taking the step and President McKinley for months imitated him. In time this act, which in itself could have had no hostile significance, came to be regarded as an expression of hostility to Spain, and all the resources of Spanish diplomacy were exerted to prevent any American warship from entering Havana harbor. Ultimately, however, the pressure of public opinion compelled the Executive to provide for representation of American authority in the disordered island, and the battleship "Maine"—a sister ship to the "Iowa," a picture of which appears elsewhere in this volume—was sent to Havana.

The night of February 15 the "Maine" lay quietly at her anchorage in the Havana harbor. Her great white hull, with lights shining brilliantly from the ports aft where the officers' quarters were, gleamed in the starlight. On the berth deck the men swung sleeping in their hammocks. The watch on deck breathed gratefully the cool evening air after the long tropic day. Captain Sigsbee was at work in his cabin, and the officers in the wardroom were chatting over their games or dozing over their books. The lights of the town and of the ancient fortress of Morro shone brightly through the purpling light. Not far away the Spanish man-of-war "Alfonso XIII." lay at her moorings, and an American merchantman, brightly lighted, was near. The scene was peaceful, quiet, beautiful. True, in the minds of many officers and men on the American warship there was a lurking and indefinable sense of danger. Their coming had been taken by the Span-

iards in Havana as a hostile act. Though all the perfunctory requirements of international courtesy had been complied with, salutes interchanged, visits of ceremony paid and returned, there was yet in the Spanish greeting an ill-concealed tone of anger. In the cafés Spanish officers cursed the Yankees and boasted of their purpose to destroy them. On the streets American blue-jackets, on shore leave, were jostled, jeered, and insulted. Yet the ill-temper of the Spaniards, though apparent, was so ill defined that no apprehension of a positive attack was felt. As is the practice on men-of-war, however, the utmost vigilance was maintained. Only the employment of a boat patrol and the use of torpedo nettings were lacking to give the "Maine" the aspect of a ship in an enemy's harbor.

Then came the disaster that shocked the world. A disaster in which it is impossible not to suspect the element of treachery. A disaster which if purely accidental, occurring to a hated ship in a port surrounded by men who were enemies at heart, was the most extraordinary coincidence in history. The story is brief. Not until this war is ended and the authority of the United States is employed to clear up the mystery, can the real narrative of the destruction of the "Maine" be told.

This much we know: At about half-past nine those on the "Maine" who lived to tell the tale heard a sudden dull explosion, with a slight shock, then a prolonged, deep, furious roar, which shook the ship to its very vitals. The people on the other ships in the harbor saw the whole forward portion of the "Maine" suddenly become a flaming volcano belching forth fire, men, huge pieces of steel, and bursting shells. Portions of the ship's hull rained down on decks a thousand yards away. When the first fierce shock of the explosion was past, it was seen that the "Maine" was on fire and was rapidly sinking.

How wonderful is the power of discipline upon the human mind! On the great battle-ship, with hundreds of its men blown to pieces or penned down by steel débris to be drowned in the rapidly rising waters, there was no panic. Captain Sigsbee, rushing from his cabin door, is met by the sergent of marines who serves him as orderly. Not a detail of naval etiquette is lacking. Sergeant William Anthony salutes:

"I have to report, sir, that the ship is blown up and is sinking," he says, as he would report a pilot boat in the offing.

The captain reaches the deck to find his officers already at work, the

men who have not been injured all at their stations. Boats are lowered and ply about the harbor to rescue survivors. Though the flames rage fiercely, and the part of the ship which they have not yet reached is full of high explosives, there is no panic. At the first alarm every man has done what years of drill and teaching have taught him to do. The after-magazines have been flooded, the boats' crews called away. Even preparations for a fight had been attempted. Lieutenant Jenkins, hearing the first explosion, sprang so quickly for his station at a forward gun that he was caught in the second explosion and slain. Though a bolt from heaven or a shock from hell had struck the "Maine," it brought death only—not fear nor panic.

The work of rescuing survivors and caring for the wounded was pushed apace, for the ship sunk rapidly, until only her after-superstructure was above the water. Boats from the Spanish man-of-war joined in the work of mercy and her officers, as though conscious that the suspicion of treachery was first in every man's mind, exerted themselves in every way to show solicitude for the wounded and sorrow for the disaster. When all was done that could be done, and the roll of the ship's company was called, it was found that 266 brave Americans were lost in Havana harbor—a friendly port. Some lie there yet, penned down beneath the gnarled and scorched steel which formed the gallant "Maine"; others lie in lonely graves on the adjacent shore, where, before this war is ended, the American flag shall be raised above them to be their avenger and their monument.

It will be necessary to outline in only the most terse and condensed form the political and military events which succeeded the destruction of the "Maine" and led up to the declaration of war. The news of the great disaster was received at home with horror, speedily turning to anger. The Government, rightly desiring to proceed calmly and in accordance with regularly ascertained facts, strove to calm the public temper, but with little success. It gave out as Captain Sigsbee's first report of the disaster a cable message, which contained no charge of treachery, advised caution and urged a suspension of judgment. But presently it became rumored about Washington that this dispatch was, in fact, sent under orders; that the captain's first report formally charged the Spaniards with blowing up the ship. In the newspapers the discussion raged and theories of the dis-

aster were plentiful, but, after long weeks of careful study of the evidence, the Naval Board of Inquiry presented the following report :

When the " Maine " arrived at Havana, she was conducted by the regular Government pilot to buoy No. 4, to which she was moored in from five to six fathoms of water.

The state of discipline on board, and the condition of her magazines, boilers, coal-bunkers, and storage compartments, are passed in review, with the conclusion that excellent order prevailed, and that no indication of any cause for an internal explosion existed in any quarter.

At eight o'clock on the evening of February 15 everything had been reported secure, and all was quiet. At 9.40 o'clock the vessel was suddenly destroyed.

There were two distinct explosions, with a brief interval between them. The first lifted the forward part of the ship very perceptibly ; the second, which was more open, prolonged, and of greater volume, is attributed by the Court to the partial explosion of two or more of the forward magazines.

The evidence of the divers establishes that the after-part of the ship was practically intact, and sank in that condition a very few minutes after the explosion. The forward part was completely demolished.

Upon the evidence of a concurrent external cause the finding of the Court is as follows :

At frame 17 the outer shell of the ship, from a point eleven and one-half feet from the middle line of the ship and six feet above the keel when in its natural position, has been forced up so as to be now about four feet above the surface of the water ; therefore, about thirty-four feet above where it would be had the ship sunk uninjured.

The outside bottom plating is bent into a reversed V-shape, the after-wing of which, about fifteen feet broad and thirty-two feet in length (from frame 17 to frame 25), is doubled back upon itself against the continuation of the same plating extending forward.

At frame 18 the vertical keel is broken in two and the flat keel bent into an angle similar to the angle formed by the outside bottom plates. This break is now about six feet below the surface of the water and about thirty feet above its normal position.

In the opinion of the Court, this effect could have been produced only by the explosion of a mine situated under the bottom of the ship, at about frame 18, and somewhat on the port side of the ship.

The conclusions of the Court are:

That the loss of the " Maine " was not in any respect due to fault or negligence on the part of any of the officers or members of her crew.

That the ship was destroyed by the explosion of a submarine mine, which caused the partial explosion of two or more of her forward magazines ; and,

That no evidence has been obtainable fixing the responsibility for the destruction of the " Maine " upon any person or persons.

To-day, in the midst of war with Spain, we have no more definite, no more authoritative knowledge of the cause of this disaster than this.

Spain, indeed, through her official commission, decided that the explosion was wholly internal, but the American people is not convinced. Battleships are not in the habit of blowing themselves up, and it is the expectation that the establishment of American authority in Cuba will be followed by the unraveling of this murderous plot. Undoubtedly an anecdote told

PARTIAL VIEW OF THE WRECK OF THE "MAINE."

of Captain Robley D. Evans (Fighting Bob) of the navy expresses the popular conviction :

"The admiral in command of the United States fleet at Key West should have sailed for Havana on getting news of the 'Maine's' destruction," said Evans. "He should have reduced the forts, seized the city, discovered the assassins, and hanged them."

"But that would have been defiance of the orders of the Navy Department," responded his auditor, aghast.

"Perhaps so," admitted Evans, "but the man who did it would have been the next President of the United States."

While the "Maine" Court of Inquiry was in session measures looking toward war were rapidly taken. March 9, a bill, which had passed both houses of Congress without a dissenting voice, became a law, appropriating \$50,000,000 to be expended for the national defense. Out of this sum the Navy Department bought two Brazilian cruisers building in England, which were rechristened the "New Orleans" and "Albany." A flotilla of yachts, sea-going tugs, and merchantmen was bought and refitted. The great American liners "St. Paul," "City of Paris," "City of New York," and "St. Louis" were chartered and made into auxiliary cruisers. All Europe was ransacked for purchasable warships and torpedo boats, with the result of proving that no nation, however rich, can equip itself with a navy in an emergency. Not one battle-ship was available for purchase, and only four cruisers, of doubtful quality. And while this work of preparation was going hurriedly on the country was drifting into war with what seemed at the time inexplicable slowness, but to the calmer backward glance of history will appear dangerously swift in the face of our great lack of preparation. What might be termed the milestones on the march to battle were these:

April 5.—Consul General Fitz Hugh Lee recalled from Havana.

April 11.—Message of the President on Cuba, recommending that we have power to intervene forcibly without "recognizing at this time the independence of the present insurgent government."

April 13.—The House passed a resolution directing the President to intervene in Cuba at once, and authorizing him to use the land and naval forces of the United States to stop the war.

April 16.—The Senate passed a joint resolution, as a substitute for the House resolution, declaring the island to be free, recognizing the republic, demanding relinquishment of authority in Cuba by Spain, and withdrawal of Spanish forces; directing the President to call out the militia in addition to regular land and naval forces, and, finally, disclaiming any intention to annex the island.

April 19.—Senate resolution adopted by the House, with the proviso recognizing the republic of Cuba stricken out. Both houses agreed to the report in this form.

April 20.—Ultimatum to Spain, cabled at 11 A. M.—a formal demand that Spain at once relinquish its authority and government in the island of Cuba, and withdraw its land and naval forces from Cuba and Cuban waters.

President signed Cuban joint resolutions at 11.24.

Señor Polo y Bernabé, the Spanish Minister, was notified. He at once requested his passports.

April 21.—General Woodford, the American Minister at Madrid, left Spain.

The President directed the Secretary of the Navy to order the vessels of the North Atlantic squadron to proceed without delay to Cuban waters to blockade Havana and other ports of the island.

April 23.—President McKinley signed the proclamation calling for 125,000 volunteers.

April 25.—Formal declaration of war recommended by the President, and a bill "declaring that war exists between the United States of America and the Kingdom of Spain," passed by both houses.

And so the United States embarked on its first war with any European Power, save England—a war forced upon us by every consideration of humanity—a war which shall be of great advantage or of great harm to our Republic, according as its fruits are wisely or wrongly administered.

CHAPTER II.

THE OPENING DAYS OF THE WAR.—THE FIRST BLOW STRUCK IN THE PACIFIC.
—DEWEY AND HIS FLEET.—THE BATTLE AT MANILA.—AN EYE-WITNESS'
STORY.—DELAY AND DOUBT IN THE EAST.—DULL TIMES FOR THE BLUE-
JACKETS.—THE DISCOVERY OF CERVERA.—HOBSON'S EXPLOIT.—THE
OUTLOOK.

STRANGELY enough the first warlike stroke at Spain was not delivered in or about Cuba, where the quarrel arose, but in the other hemisphere, in the far-away waters of the Asiatic Pacific, where the American flag is almost a stranger and the power and wealth of the great American Republic are unknown. In the Philippine Islands Spain retains one of the colonies with which she once encircled the globe. More than 7,000,000 people—a peace-loving, kindly, intelligent race—are there ruled by the Spaniards, and as the rule was of the characteristic Spanish kind, with all the accompaniments of slaughter, dishonor, and extortion, the natives—as in Cuba—were in a chronic state of rebellion. One uprising, which had assumed very considerable proportions, was reported by the Spaniards as suppressed just before our declaration of war. That event, however, aroused the revolutionists again and, as we shall see, they were of the greatest service to us as allies.

When war was declared an American squadron of six warships lay at Hong Kong. The vessels were the "Olympia," protected cruiser;

"Raleigh," "Baltimore," and "Boston," cruisers; "Concord" and "Petrel," gunboats, and the revenue cutter "McCulloch." Not a very powerful fleet—not a battle-ship nor even an armored cruiser among them—but the ships carried crews of as sturdy Yankee blue-jackets as ever trained a gun, and when the time came for daring an enemy's fire the little "Petrel" was as dashing and defiant as the stoutest of steel-clads could be. In command of the squadron was Admiral George Dewey, a Vermonter, who served with Farragut and had his baptism of fire at the forts below New Orleans. In time of peace the war record of a subaltern is quickly forgotten, and Dewey patiently climbed the ladder of promotion until 1898 found him a commodore and in command of the Asiatic squadron, without anybody's remembering particularly that this officer in far Hong Kong had seen fighting and knew how to bear himself under fire. It is a significant fact that when he had won the first great victory of the war, and the newspapers were searching everywhere for stories illustrative of his character, it was discovered that he had chiefly impressed himself on the Washington mind by his excessive punctiliousness in matters of dress.

Four days after the declaration of war there was a commotion on the ships of Dewey's squadron. The signal to weigh anchor flew from the foremast of the "Olympia," and everybody knew that the admiral had received fighting orders. For some days past the ships had been in their battle rigging. The white paint had been covered by a dull greenish-gray. All woodwork, railings, and unnecessary hamper had been stripped off and sent ashore. The officers' baggage was reduced to the barest necessities. Nothing was left anywhere on board which could be turned into a cloud of flying splinters by a shell, or which cumbered the decks to the inconvenience of the gunners. The warships which, in time of peace, were as bright and sparkling as a well-kept yacht, had put on the sullen, vicious air of war.

Dewey's objective point when he set sail from the harbor of Hong Kong was the Asiatic squadron of Spain, under the command of Admiral Montojo. There was every reason to believe that he would find the enemy under the protecting guns of the forts that guarded the harbor of Manila. In themselves the Spanish ships were no match for the American fleet. Three good ships had Admiral Montojo—the "Reina Cristina," the "Castilla," and the "Don Antonio de Ulloa"; but his others were old-fashioned

and lacking in modern armament. But should they take positions under the guns of the Spanish forts, at the end of a channel plentifully guarded by mines and torpedoes, the disparity in forces would disappear. As it occurred this was precisely what they did, giving Admiral Dewey opportunity to put into practice tactics which it seems he had studied for months in anticipation of exactly such an emergency.

On the night of April 30 the American ships arrived at the entrance of Manila harbor, unseen by the sentries on the forts. It was known that Montojo was inside, and every light was extinguished and every noise hushed on the Yankee ships, for the admiral had planned a midnight entrance to the stronghold. The ships were stripped for action, boats covered with canvas, nettings spread to prevent splinters from flying, partitions removed, and ammunition hoists and bullet shields put up. At midnight the entrance to the harbor began, the ships steaming in single column at about six knots an hour, with the "Olympia" leading. Strangely enough not a single torpedo or mine in the channel was exploded, though the Spaniards discovered the advance of the ships and opened fire from the forts. The first shot in answer was fired by a gunner on the "Boston," without orders. He saw the flash of a gun on a shore battery and instantly fired his piece without altering its elevation. That dismantled a gun in the Spanish works and killed thirty men.

For a few hours after passing the forts the wearied blue-jackets slept at their guns. With the approach of day came the signal from the flagship to prepare for action. In the gray dawn the Spanish fleet could be seen about two miles distant, at such a point that their fire could be re-enforced by the guns of the forts. A most graphic story of the action that followed, as seen from the view-point of "the man behind the gun," whom Captain Mahan eulogizes, is told by Chief Gunner Evans of the "Boston," from whose narrative I quote the following paragraphs:

"We were steaming very slowly, but increasing speed as the dawn increased. In the gray daylight we could make out a line of ships anchored in front of the city. Then we steamed ahead faster. The ships ahead proved to be merchantmen, and at daylight we could discern the Spanish fleet further down the bay, and then it was 'Full ahead!' The Spanish fleet did not advance to meet us, and apparently made no move on the defensive. Possibly our audacity had for the moment paralyzed them. But it was not for long. In twenty minutes or so they opened a terrific cannonading at long range. The batteries and

forts around Manila opened fire at the same time. Every man on the ship was now wide awake and at his post. I knew that it would not be long before there would be some hot work, and I served my men with a cup of coffee and a piece of hardtack, and a little later gave them each a drink of whisky and water.

"According to orders, we did not respond to the Spanish guns until our ships came into position. Then the flagship opened fire, and then I followed with two hours of cannonading which I do not believe has ever been equaled in naval warfare. The shots from the 'Olympia' were the prearranged signal for the other ships to do the same.

"We soon discovered that the batteries of Cavité were very heavily mounted, and the ordnance included several ten-inch guns, and we were not long in finding out that the 'Don Antonio de Ulloa' and the 'Reina Cristina,' the flagship, carried much heavier guns than we thought. We began to fear that our ships had met their match. As hot as the battle was, the heat of the sun was equally so, and I had my men who were bringing up the ammunition throw off every vestige of clothing except their shoes.

"The Spanish guns had opened upon us at 5.10 A. M., and it was fully 5.40 before we began to reply. But when we did, we made every shot tell, for our gunners demonstrated that their opponents were no match for them in accuracy, although the Spaniards had every advantage and should have known the exact range of every point in the harbor, while of the American fleet not a single gunner had ever as much as been in the harbor before.

"By 6.30 we had circled three times, and were starting for the fourth when the Spanish admiral came out in the 'Reina Cristina' and gallantly assailed us; but we made it hot for him. I don't know how in the world he escaped with his life. While he was standing on the bridge a shot from one of our ships—I think it was the 'Concord'—blew the bridge clean over; in fact, shot it right from under him, but the Admiral was apparently uninjured, for a few minutes later I saw him walking the deck as calmly as though he was on parade. It was getting too hot for him, and he evidently saw that his ship was no match for us, and he turned to get back to his fleet.

"Just as the 'Reina Cristina' swung around an eight-inch shell from the port battery, which I was tending, struck her square astern, and set her on fire. By this time other gunners had got the range, and if ever a ship was riddled it was the 'Reina Cristina.' I do not think it was fifteen minutes from the time the shell from the 'Boston' struck her when she went down with, it is said, over two hundred men. The Admiral, however, had escaped in a small boat and made for the 'Isla de Cuba,' where he again hoisted his flag.

"After we had circled five times, we withdrew. The smoke was so dense that we could hardly distinguish friend from foe. Our men had worked three long hours with scarcely a mouthful of food. I had, however, kept my men well supplied with whisky and water. I gave each a small drink about every twenty minutes.

"After we had withdrawn, and the clouds of smoke had lifted enough so that we could see, Admiral Dewey signaled the ships to report the number of killed and wounded. It would have done your heart good to have heard the shouts and cheers that went up as ship

after ship ran up the signal to indicate that she had no killed and none wounded worth reporting. It was one of the most thrilling moments of the entire battle.

"It was a wise move on Admiral Dewey's part in withdrawing at that moment, for our men were rapidly becoming exhausted. For my own part I do not think I could have held out another half hour, and neither could my men. We were not only wearied physically, but the nervous strain was something awful. I called my men into the gunroom and served each with a good stiff drink of whisky and told them to take all the rest they could get. I went into the chartroom, as it was about the coolest place on the ship, and threw myself on the chart table. I was too nervous to sleep and too exhausted to move. I just lay there sort of dazed.

"Soon after ten o'clock we advanced again, and the 'Baltimore' opened the fight. As many of the Spanish ships had been disabled, what we most feared now was the forts. The 'Baltimore' sailed right into the very teeth of the guns, any one of which could have annihilated her, and only bad marksmanship of the Spanish gunners saved her from destruction, and she did not retreat until she had practically silenced the fort.

"My ship, the 'Boston,' was perhaps struck oftener during the battle than any of the American ships, but in every instance it was small shot or shell, making a glancing blow that did no particular harm. After the first hour or so of the battle, if we had received a damaging shot, the chances are that we would have all gone down, for out of all the ship's boats, only two were of any value, the others having been shattered to pieces.

"We were circling in line with the other ships when the 'Isla de Cuba' swung around to give us a broadside. The guns in the port battery got the range on the 'Isla de Cuba,' and sent in a shot that struck in amidships and made her tremble from stem to stern. I was watching at the porthole at the time. The other guns of the 'Boston' followed the example of the port gunner, and for a few minutes it seemed that the 'Isla de Cuba' was crumbling to pieces like a falling building in an earthquake. We turned, and the starboard guns did equally good work, and when the Spanish flag came tumbling down we let out a yell that was heard around the world, figuratively speaking, if not literally.

"I can never forget the scene after the battle. The forts were smoking, and scattered all through the bay were the hulks of once magnificent Spanish ships. Some were drifting helplessly about, as though the men on board seemed not to know what to do and had lost their heads entirely. Rigging was trailing in the water and only remnants remained of the lifeboats. Over at one end of the bay was the wreck of the once magnificent 'Reina Cristina.' Further along were smoking hulks, and here and there could be seen only the masts and rigging above water.

"To add to the horror of the scene, hundreds of corpses came floating by, and it seemed as though the bay was full of dead Spaniards, although I believe less than a thousand were killed. I really think that the sight in the harbor that afternoon impressed men more with the horrors of war than did anything which occurred during the actual battle.

"During all the fight my men, except for a little while during the interval for breakfast, were stripped to the bare skin and wore only their shoes. The thermometer was over one

hundred, and to this was added the heat of the fire of the guns, until it made one's blood fairly boil."

The plan of action was for the fleet to revolve in a great circle or ellipse before the delivering their fire from starboard and port batteries alternately. The first shot from the "Olympia" was a 250-pound shell, aimed at the Cavité fort, and discharged with a shout from all hands, "Remember the Maine!" After two hours' fighting the fleet withdrew for breakfast, returning to action in about two hours, and after the Spanish surrender the little "Petrel" was sent in to destroy, by boats' crews, the ships in the inner harbor.

Commodore Dewey's official report of the action is a model of modesty and brevity. It came in these two cable messages:

MANILA, May 1.—Squadron arrived at Manila at daybreak this morning. Immediately engaged the enemy, and destroyed the following Spanish vessels: "Reina Cristina," "Castilla," "Don Antonio de Ulloa," "Isla de Luzon," "Isla de Cuba," "General Lezo," "Marquis de Duero," "Cano," "Velasco," "Isla de Mindanao," a transport, and water battery at Cavité. The squadron is uninjured, and only a few men are slightly wounded. Only means of telegraphing is to American Consul at Hong Kong. I shall communicate with him.

DEWEY.

CAVITÉ, May 4.—I have taken possession of naval station at Cavité, on Philippine Islands. Have destroyed the fortifications at bay entrance, paroling the garrison. I control bay completely, and can take city at any time. The squadron is in excellent health and spirits. Spanish loss not fully known but very heavy. One hundred and fifty killed, including captain of "Reina Cristina." I am assisting in protecting Spanish sick and wounded; 250 sick and wounded in hospital within our lines. Much excitement at Manila. Will protect foreign residents.

DEWEY.

It is little short of marvelous that no lives were lost on the American ships—though a month later Captain Gridley of the "Olympia" died from the effect of the concussion of his own guns. The vessels were handled with a daring amounting almost to bravado, yet so poor was the marksmanship of the Spaniards that little or no damage was suffered. It is to be kept in mind that, despite the disparity in the armament of the fleets, the Spanish works at Cavité mounted guns of twice the weight of any that Dewey's ships bore. Yet, when the action was over, the American vessels were practically uninjured, and perfectly capable of fulfilling the threat sent by

Admiral Dewey, that if another shot was fired he would lay Manila in ashes.

For months that threat alone kept order in Manila Bay. But at last the long-awaited troops, under command of Gen. Wesley Merritt, began arriving by transports. July 31st the Spaniards delivered a fierce attack upon the American forces ashore, but were repulsed. On August 13th, after—as we shall see in a later chapter—an armistice had been declared between Spain and the United States, Commodore Dewey, knowing nothing of the peace arrangements, bombarded the city. All the ships in the fleet joined in the bombardment, the Olympia leading. Under cover of this fire, which stilled the Spanish batteries, though it did little harm to the city, the United States troops pressed forward until the Spanish commander surrendered. Manila thereupon became the first outpost of the United States in Asiatic waters.

In the waters of the Gulf of Mexico and the Caribbean Sea, where it was expected the fighting would come first and be most decisive, the war lagged languidly for weeks. For a few days the jackies found some excitement and some hope of profit in capturing unsuspecting Spanish merchantmen, but soon the dull and deadly monotony of the peaceful blockade settled down upon the fleet, and Sampson's men grilled grimly under a blazing sun by day and slept uneasily by their guns at night, week after week, without a touch of battle to vary the dull round. Blockading is the most trying duty the blue-jacket has to discharge. Destitute wholly of glory, the element of danger is still ever present in a form which is particularly trying to the nerves. Every night brought danger of an attack by torpedo boats. These swift and sinister craft might at any time dart out of Havana harbor, discharge their fatal bolt, and send a good ship to the bottom as speedily as went the "Maine." That the Spaniards at no time even seriously attempted a torpedo-boat attack on the blockading squadron seems to reflect on their courage. But what they lacked apparently in courage they made up in shrewdness. For weeks the best efforts of our board of strategy and our board of naval intelligence were baffled by the mysterious movements of the Spanish fleet under Admiral Cervera. This squadron, which numbered among its vessels the powerful armored cruisers "Vizcaya," "Maria Teresa," Cristobal Colon," and "Almirante Oquendo,"

was reported now at the Canaries, then at Cadiz, then dashing through the Suez Canal to overwhelm Dewey at Manila, then off the coast of New England,—whereat Boston and Portland were mightily alarmed,—then bound South to capture or destroy the "Oregon,"—which was painfully making the voyage around Cape Horn,—then at Martinique, and, in short, at every conceivable point of menace. As a result of these conflicting reports, two American fleets were reduced to impotence. The "flying squadron" of fast cruisers under Commodore Schley was kept for weeks at moorings in Hampton Roads ready to be dispatched for protection of our northern coasts, while the squadron of battleships under Admiral Sampson was made to steam hither and yon in the Caribbean Sea looking for an enemy's fleet which much of the time lay snugly on the other side of the Atlantic. Accordingly, up to June 15, the results of naval operations in West Indian waters were almost *nil*. Powder had been burned indeed as when, on April 27, the Spanish works at Matanzas were bombarded and silenced by the "New York," "Puritan," and "Cincinnati," of Admiral Sampson's squadron, and on May 13 the works at San Juan, Porto Rico, were similarly tested. Deeds of conspicuous gallantry, too, were done, as when Ensign Worth Bagley lost his life while gallantly engaging Spanish gunboats and shore batteries with the torpedo boat "Winslow" at Cardenas. But these actions, though seized upon eagerly by a public hungry for war news, were inconclusive and trivial. The shore batteries were quickly repaired and strengthened, and the great object of capturing Havana seemed at the middle of June even further off than it had when war was declared.

Nevertheless, May and June saw a marked progress in the work of preparation for active hostilities. The army was mobilized and a great camp established at Tampa, Fla. Schley's flying squadron, finally relieved from apprehension as to the course of the Spanish fleet, left Hampton Roads to increase the naval strength in West Indian waters. The great battleship "Oregon," after a record-beating voyage around Cape Horn, in which her machinery met and withstood every imaginable strain, arrived at the rendezvous. And finally it was definitely learned that Admiral Cervera, with Spain's principal effective fleet, was actually in West Indian waters, and had entered the port of Santiago de Cuba for coal and repairs. There he was trapped by an exploit which has conferred new glory on the United

States Navy and has added a new name to the roster of dashing heroes like Somers and Cushing.

The harbor of Santiago de Cuba is one of the most easily defended in the world. Steep hills rise abruptly from either side of the harbor's mouth, which is scarce half a mile wide, with a channel so narrow that two vessels could scarcely pass in it. Into the brow of the hills are built batteries which, with plunging shot, command the entrance completely. An abrupt turn in the interior shore line makes the whole inner bay invisible from without, so for days the officers and men of the United States blockading fleet outside were ignorant whether Cervera's entire fleet was cooped up within. To send in a boat to make a reconnoissance would have been suicidal, for the channel, difficult at all times, was blocked by mines and torpedoes. For this reason, too, there could be no repetition of Dewey's exploit at Manila.

Accordingly, Admiral Sampson was confronted with a problem which seemed likely to tax the patience rather than the daring of his men. There seemed to be no opportunity for more exciting duty than a long blockade, unless the Spaniards should conclude to come out and fight—a most unlikely decision for them to reach. The forts, in all probability, could be reduced by the ships' cannon, but, even with that done, to enter the harbor in single file, so that the undisturbed fire of Cervera's fleet could be directed upon the Americans, ship by ship, as they entered the bay, would have been a most hazardous undertaking. The situation was not made more pleasing to the admiral by the fact that he was not sure of having all the Spanish ships in the trap. Some might not have entered Santiago, but might be at that very time devastating portions of the coast of the United States.

While the admiral was considering the problem thus presented to him, there appeared at his cabin a young lieutenant, Richmond P. Hobson, a graduate of the Naval Academy in 1889. The scientific side of naval duty had always chiefly attracted this young man. Graduating at the head of his class, he studied naval construction for two years in British dockyards. Above all things a student, a contributor to magazines, a delver into mathematical and structural problems, this young officer outlined to the admiral an exploit of reckless daring and volunteered himself to perform it.

It was folly, urged Hobson, to keep the entire American fleet watching

at the door to that harbor. The Spaniards, doing nothing and daring nothing themselves, were still reducing Admiral Sampson's powerful squadron to complete impotence. If the entrance to the harbor were obstructed one or two ships would serve to prevent the Spaniards from escaping, and the remainder of the American fleet would be released to take part in more vigorous warfare. By sinking a vessel, an old collier heavily laden, in the channel this could be accomplished, and Hobson volunteered to perform the feat. It was an invitation to almost certain death, for the fire of three batteries and part of the Spanish fleet, besides the explosion of the mines, must be braved before the narrow spot in which the ship was to be sunk could be reached. But Hobson thought he could do this, scuttle his ship, and escape with his men by swimming to a launch which should accompany him at a distance.

"Do you really expect to escape alive?" asked one of the officers as he outlined his project.

"Ah! that is another thing," replied the lieutenant. "I suppose the Estrella battery will fire down on us a bit, but the ships will throw their searchlights in the gunners' faces and they won't see much of us. Then, if we are torpedoed, we should even then be able to make the desired position in the channel. It won't be so easy to hit us, and I think the men should be able to swim to the dingey. I may jump before I am blown up, but I don't see that it makes much difference what I do. I have a fair chance of life either way. If our dingey gets shot to pieces, we shall then try to swim for the beach right under Morro Castle. We shall keep together at all hazards. Then we may be able to make our way alongside, and perhaps get back to the ship. We shall fight the sentries or a squad until the last, and we shall only surrender to overwhelming numbers."

The plan being approved by the admiral, volunteers were asked from the fleet, by signal, to accompany Hobson. Practically the whole fleet responded. One man was wanted from each ship, but on the "Brooklyn" 150 and on the "Texas" 140 pleaded to be taken. Finally these seven were selected:

Osborn Deignan, a coxswain of the "Merrimac"; George F. Phillips, a machinist of the "Merrimac"; John Kelly, a water-tender of the "Merrimac"; George Charette, a gunner's mate on the flagship "New York"; Daniel Montague, a seaman of the cruiser "Brooklyn"; J. C. Murphy.

a coxswain of the "Iowa"; Randolph Clausen, a coxswain of the "New York."

To man the launch which was detailed to follow the "Merrimac"—the ship chosen—four men and Naval Cadet Joseph W. Powell were taken. In the end they, too, proved to be heroes.

The steel steamer "Merrimac," loaded with 2,000 tons of coal, was then given to Hobson and prepared for sinking. An eye-witness, who followed the "Merrimac" as nearly as safety would permit, thus tells the story in the *New York Sun*:

"Cadet Powell and his crew saw the 'Merrimac' head straight for Estrella Point, which is on the east side of the harbor, back of the Morro. They knew that just before she reached that point the engines were to be stopped and the momentum allowed to carry her on. Then the flimsy wooden props holding the bonnets of her sea-valves in place were to be kicked aside, the helm put hard to starboard, and the starboard bower anchor let go. This would steer the ship directly across the channel and check her headway.

"At the same time seven reduced eight-inch charges, containing eighty pounds of brown powder in copper cases and protected by pitch from water, were to be set off separately. These charges were suspended about ten feet below the water-line at intervals of thirty feet, and connected by a series of dry batteries. As the ship steered across the channel the forward port powder charge was to be exploded. Then, as the stern swung into position, the anchor lashed on the starboard quarter was to be let go and the other six charges exploded in succession. A catamaran and lifeboat were slung aft on the starboard side ready for the seven men to drop into them.

"The crew in the steam launch watched the course of the old collier with eyes strained. The moon had sunk behind the horizon. It was 3.20 o'clock. On, on the heroes went. Lieutenant Hobson stood on the bridge of the old collier, dressed in full uniform. The other six men were at their posts, clad in tights, to aid their escape in case they had to swim a long distance.

"The watchers saw her head straight for Estrella Point, saw her swing hard across the channel, apparently undiscovered, heard five of the seven charges explode, and then began a screaming, flashing, death-dealing fire from the Spanish ships and batteries that hid the rest from view.

"The battery on Dead Man's Point, square in the center of the harbor, opened the fire and soon directed its guns against the launch. In the face of this hell, with ten- and twelve-inch guns blazing at them at this short range, Cadet Powell and the crew of his launch continued to search for the men of the 'Merrimac.'

"They saw then the guns of the 'Cristobal Colon,' Admiral Cervera's flagship, and of the old cruiser 'Reina Mercedes,' which had been considered gunless, trained on them and thundering in their ears.

CAPTAIN MAHAN

CAPTAIN CRONINSHIELD

SECRETARY LONG

ADMIRAL STEWARD

THE NAVAL BOARD OF STRATEGY: 1808

"Still they searched with never as much as a faint cry for help or the sign of a single arm raised in mute appeal to guide them. Those on the battleship looking into the mouth of the harbor saw only a sheet of flame which, with the roar of the guns, lasted thirty-five minutes. By this time dawn had tinged the land and sky with light, and the tiny launch could be seen loitering by the shore. On the west side of the harbor, in the center of the channel, just where Hobson had promised to sink his vessel, could be seen the tops of the 'Merrimac's' masts. The harbor was blocked."

Hobson and his gallant men were not lost. A shot from one of the batteries destroyed the boat in which they had expected to reach the launch, but on a raft they escaped from their sinking vessel, only to be captured by the Spaniards. With sailor-like chivalry and hearty admiration for a gallant deed Admiral Cervera sent word to the fleet of their safety and offered to exchange them as soon as the necessary formalities could be complied with.

CHAPTER III.

THE SPANISH FLEET MAKES A DASH FROM THE HARBOR—ITS TOTAL DESTRUCTION—ADMIRAL CERVERA A PRISONER—GREAT SPANISH LOSSES—AMERICAN FLEET LOSES BUT ONE MAN—SPAIN EXPELLED FROM THE WEST INDIES—THE RESTORATION OF PEACE.

WHEN the event was least expected the Spaniards made a desperate dash from the harbor, seeking freedom but finding only death.

July 3d the land forces of General Shafter were closing in on Santiago. There had been hard fighting for two days, in which both sides had shown dogged courage, but the Spaniards had been beaten back into the city, which the Americans almost completely invested. Though Shafter had but few heavy siege guns, many of the shells from his field artillery fell in the streets of the town and produced a panic there.

Admiral Cervera had landed some of his rapid-fire guns in aid of General Linares, and his marines fought with the Spanish soldiers. But as the American advance continued he saw that he would be caught in a trap and ground to pieces between Shafter and Sampson. So he made up his mind to the desperate chance of slipping out and trying to run past the American squadron.

At 9.30 on the morning of the 3d the lookout on the "Texas" saw smoke rising above Morro Castle. Immediately after, the black prow of a warship appeared in the channel coming out at full speed. It was the "Almirante Oquendo." Instantly the "Texas" broke out with bunting signaling to all the vessels of the fleet that the Spaniards were coming out. On every side rung out the bugles and clattered gongs calling the crews of the American ships to quarters. Admiral Sampson with the "New York" was far away, and Commodore Schley with the "Brooklyn" commanded the fleet. The odds were not so greatly in favor of the Americans, for the Spaniards had four armored cruisers and two torpedo-boat destroyers, while the Americans had five battleships, one armored cruiser and a yacht. The superiority of the Spaniards in rapid-fire guns was very great.

The "Brooklyn," thinly clad with armor, dashed first into the fray and was soon engaged with four armored vessels, each her superior; the "Towa," "Texas" and "Oregon" rushed to her aid. It was soon apparent that the Spaniards were more intent on running than fighting. Nevertheless, they kept up a rapid fire, but showed the bad marksmanship which characterized Montojo's gunners at Manila. One shell from the "Oquendo" crashed through the pilot-house of the "Texas" just after Captain Philip had left it for the securer retreat of the conning tower, and one exploded in the smokestack. These were about the most effective shots aimed by the enemy.

A correspondent of the New York "Journal" and the "Sun" stationed aboard the "Texas" sent the most graphic account of the battle which has at this date, July 6, been printed. Some extracts from it will give a clear account of the fighting:

"Almost before the leading ship was clear of the shadow of Morro Castle the fight had begun. Admiral Cervera started it by a shell from the 'Almirante Oquendo,' to which he had transferred his flag. It struck none of the American vessels. In a twinkling the big guns of the 'Texas' belched forth their thunder, which was followed immediately by a heavy fire from our other ships. The Spaniards turned to the westward under full steam, pouring a constant fire on our ships, and evidently hoping to get away by their superior speed.

"The 'Texas,' still heading in shore, kept up a hot exchange of shots with the foremost ships, which gradually drew away to the westward under the shadow of the hills. The third of the Spanish vessels, the 'Vizcaya' or 'Infanta Maria Teresa,' was caught by the 'Texas' in good fighting range, and it was she that engaged the chief attention of the first battleship commissioned in the American Navy. The 'Texas' steamed west with her adversary, and as she could not catch her with speed she did with her shells.

"The din of the guns was so terrific that orders had to be yelled close to the messengers'

ears, and at times the smoke was so thick that absolutely nothing could be seen. Once or twice the 12-inch guns in the turrets were swung across the ship and fired. The concussion shook the great vessel as though she had been struck by a great ball, and everything movable was splintered. The men near the guns were thrown flat on their faces.

"Meanwhile the 'Oregon' had come in on the run. She passed the 'Texas' and chased after Commodore Schley, on the 'Brooklyn,' to head off the foremost of the Spanish ships. The 'Iowa' also turned her course westward, and kept up a hot fire on the running enemy.

"At 10.10 o'clock the third of the Spanish ships, the one that had been exchanging compliments with the 'Texas,' was seen to be on fire and a mighty cheer went up from our ships. The Spaniard headed for the shore and the 'Texas' turned her attention to the one following. The 'Brooklyn' and 'Oregon,' after a few parting shots, also left her contemptuously and made all steam and shell after the foremost two of the Spanish ships, the 'Almirante Oquendo' and the 'Cristobal Colon.'

"Just then the two torpedo-boat destroyers 'Pluton' and 'Furor' were discovered. They had come out after the cruisers without being seen, and were boldly heading west down the coast. 'All small guns on the torpedo boats' was the order on the 'Texas,' and in an instant a hail of shot was pouring all about them. A 6-pounder from the starboard battery of the 'Texas,' under Ensign Gise, struck the foremost torpedo boat fairly in the boiler.

"A rending sound was heard above the roar of battle. A great spout of black smoke shot up from that destroyer and she was out of commission. The 'Iowa,' which was coming up fast, threw a few complimentary shots at the second torpedo-boat destroyer and passed on. The little 'Gloucester,' formerly a yacht, then sailed in and finished the second boat."

The "Gloucester" of which the correspondent speaks was in command of Lieutenant-Commander Wainwright, who had been the executive officer of the "Maine." For two months after the disaster to that vessel Wainwright lived on a United States ship in the harbor of Havana, refusing to set foot on shore until he could go "with a landing party of marines." In his attack on the torpedo-boat destroyers—vastly superior to his craft in weight and armament—he threw prudence to the winds and fought with a fierceness bred of bitter hatred for the Dons. His was the most stirring display of personal courage shown on a day when all were brave.

To return to the correspondent's account:

"Gun for gun and shot for shot the running fight was kept up between the Spanish cruisers and the four American vessels. At 10.30 o'clock the 'Infanta Maria Teresa' and 'Vizcaya' were almost on the beach, and were evidently in distress. As the 'Texas' was firing at them a white flag was run up on the one nearest her. 'Cease firing,' called Captain Philip, and a moment later both the Spaniards were beached. Clouds of black smoke arose from each, and bright flashes of flame could be seen shining through the smoke. Boats were visible putting out from the cruisers to the shore. The 'Iowa' waited to see that the two warships were really out of the fight, and it did not take her

long to determine that they would never fight again. The 'Iowa' herself had suffered some very hard knocks.

"The 'Brooklyn,' 'Oregon' and 'Texas' pushed ahead after the 'Colon' and 'Almirante Oquendo,' which were now running the race of their lives along the coast. At 10.50 o'clock, when Admiral Cervera's flagship, the 'Almirante Oquendo,' suddenly headed in shore, she had the 'Brooklyn' and 'Oregon' abeam and the 'Texas' astern. The 'Brooklyn' and 'Oregon' pushed on after the 'Cristobal Colon,' which was making fine time and which looked as if she might escape, leaving the 'Texas' to finish the 'Almirante Oquendo.' This work did not take long. The Spanish ship was already burning. At 11.05 o'clock down came a yellow and red flag at her stern. Just as the 'Texas' got abeam of her she was shaken by a mighty explosion.

"The crew of the 'Texas' started to cheer. 'Don't cheer, because the poor devils are dying,' called Captain Philip, and the 'Texas' left the 'Almirante Oquendo' to her fate to join in the chase of the 'Cristobal Colon.'

"That ship in desperation was plowing the waters at a rate that caused the fast 'Brooklyn' trouble. The 'Oregon' made great speed for a battleship, and the 'Texas' made the effort of her life. Never since her trial trip had she made such time.

"The 'Brooklyn' might have proved a match to the 'Cristobal Colon' in speed, but she was not supposed to be her match in strength.

"It would never do to allow even one of the Spanish ships to get away. Straight into the west the strongest chase of modern times took place. The 'Brooklyn' headed the pursuers. She stood well out from the shore in order to try to cut off the 'Cristobal Colon' at a point jutting out into the sea far ahead. The 'Oregon' kept a middle course about a mile from the cruiser. The desperate Don ran close along the shore, and now and then he threw a shell of defiance. The old 'Texas' kept well up in the chase under forced draught for over two hours.

"The fleet Spaniard led the Americans a merry chase, but she had no chance. The 'Brooklyn' gradually forged ahead, so that the escape of the 'Cristobal Colon' was cut off at the point above mentioned. The 'Oregon' was abeam of the 'Colon' then, and the gallant Don gave it up.

"At 1.15 o'clock he headed for the shore, and five minutes later down came the Spanish flag. None of our ships was then within a mile of her, but her escape was cut off. The 'Texas,' 'Oregon' and 'Brooklyn' closed in on her and stopped their engines a few hundred yards away.

"Commodore Schley left the 'Brooklyn' in a small boat and went aboard the 'Cristobal Colon' and received the surrender. Meantime the 'New York,' with Admiral Sampson on board, and the 'Vixen' were coming up on the run. Commodore Schley signaled to Admiral Sampson: 'We have won a great victory; details will be communicated.'

"Then for an hour after the surrender in that little cove under the high hills was a general Fourth of July celebration, though a little premature. Our ships cheered one another, the captains indulged in compliments through the megaphones, and the 'Oregon' got out its band, and the strains of the 'Star-Spangled Banner' echoed over the lines of Spaniards drawn up on the deck of the last of the Spanish fleet, and up over the lofty green-tipped hills of the Cuban mountains.

"Commodore Schley, coming alongside the 'Texas' from the 'Cristobal Colon' in his gig, called out cheerily, 'It was a nice fight, Jack, wasn't it?'

"The veterans of the 'Texas' lined up and gave three hearty cheers and a tiger for their old commander-in-chief. Captain Philip called all hands to the quarter-deck, and, with bared head, thanked God for the almost bloodless victory.

"I want to make public acknowledgment here," he said, "that I believe in God the Father Almighty. I want all you officers and men to lift your hats and from your hearts offer silent thanks to the Almighty."

"All hats were off. There was a moment or two of absolute silence, and then the overwrought feelings of the ship's company relieved themselves in three hearty cheers for their beloved commander."

By this victory the naval power of Spain was effectively and finally crushed. She lost four fine armored ships and two large destroyers. In killed, wounded and prisoners her loss exceeded eighteen hundred men, while but one American was slain. Among the prisoners was Admiral Cervera, whose dignified bearing in the presence of disaster won for him the high regard of the Americans, his foes. The value of the property lost to bankrupt Spain exceeded thirteen million dollars.

It was quickly apparent to everybody except the Spaniards that the destruction of Cervera's fleet, and the consequent annihilation of Spain's sea power in this hemisphere, practically ended the war. Without ships Spain could in no way oppose the movements of our troops to any of her island possessions. Without ships, indeed, the defense of Santiago could not be maintained, and that important point, with its garrison of several thousand men, was surrendered within a week of the annihilation of Cervera. It was time indeed; for, the rainy season having set in, the sickness and mortality among the United States soldiers in the trenches reached a point which threatened the very existence of the army. As fast as possible the regiments which suffered most with the malarial plague were loaded upon transports and sent North, immune regiments being retained to garrison the captured city. Meanwhile, as though spurred on by success, the Administration at Washington made every effort to press the war with unremitting vigor. General Miles with an army of invasion landed in Porto Rico and marched into the interior of that rich and salubrious island, meeting scarcely a single check. The Spaniards seemed too disheartened to resist. And indeed at this very moment the Ministry at Madrid was preparing to make overtures of peace. Though a bold front was maintained, and the Cadiz squadron under Admiral Camara was sent into the Suez Canal as though to menace Dewey at Manila, the Spanish rulers nevertheless recognized the inevitable. Late in July they signified to the President, through the French Ambassador at Washington, M. Cambon, their willingness to consider peace proposals. An informal armistice followed, and at several points in the West Indies the United

States ships were stopped in the very midst of active battle by the news of the suspension of hostilities. The "Newark," for example, was bombarding Manzanillo when the news reached her commander. On the 12th of August the formal Protocol which ended hostilities was signed.

The war lasted one hundred and thirteen days, and was one of the most swiftly decisive struggles in history. By it Spanish naval power in the West Indies and on the Pacific was annihilated. As its inevitable result Spain will be expelled from the West Indies—left without a foothold in that New World which Columbus discovered by the aid of Spain's great monarchs, Ferdinand and Isabella. In the Pacific, too, Spain's power was crushed. The Ladrone and Caroline Islands were seized by United States ships as a mere incident of the advance on the Philippines. The flag which Dewey raised at Manila is there to stay. If, indeed, Spanish treachery was at the bottom of the disaster to the "Maine," the reparation has been full.

The United States has gained territory, but, most of all, its navy has won world-wide prestige. The speed and stoutness of our ships, the rapidity and precision of our gunnery, the vigilance and skill of our commanders, have been the admiration of the naval world. Our own people love the navy as never before in our national history. The home-coming of Admiral Sampson's battle-scarred fleet was made the occasion of such an ovation in New York Harbor as no squadron ever before enjoyed. Upon that glorious roster of naval heroes which begins with Paul Jones and includes Decatur, Hull and Farragut, are now inscribed the names of Dewey, Sampson and Schley, and one more war period in American history is ended with the complete demonstration that for the United States sea power is the assurance of safety.
